forms is due to the difference in mechanical composition of soil materials. Fissure polygons are described and their origin explained by various theories. Objections are raised to Gripp's theory of the origin of structural forms by the differences of temperatures, on the ground that tundra soil at Arfersiorfik has a temperature of 4° C. in July and Aug. at a depth 30-45 cm. so that the upper layer of soil cannot be active during the summer. Measurements of temperatures in deeper horizontal profiles under the polygonal formations at a depth of 33-87 cm. are tabulated to show the non-existence of convection currents."—SIPRE.

**22921. JAHN, ALFRED.** Przyczynęk do znajomości stożków usypiskowych w krajach polarnych. (Przegląd geograficzny (Warsaw), 1947. v. 21, p. 1-10 incl. illus., diagr.) **Title tr.:** Contribution to the knowledge of talus in polar regions.

"Frost and frequent temperature changes near 0° C. produce talus in high mountain and polar regions. The profile of a talus in Arfersiorfik fiord was investigated during the 1937 Polish West Greenland Expedition. Four parts are distinguished: a base surface of inclination less than 15°, a medial slope with an inclination of 15°, the main part with a slope steeper than 15°, and a summit. The medial slope is more significant for talus in polar regions, being a product of rain and meltwater deposits, than for talus in temperature zones. Permafrost is the primary factor in the solifluction process."—SIPRE. Summary in English.

**22940. JANSSON, WALD.** Routakysymys rautatiellä. (Teknillinen aikauslehti, Jan. 1939. v. 29, no. 1, p. 13-20, illus., diagrs.) **Title tr.:** The ground-freezing problem on railroads.

Contains data on the effects of freezing weather on railroad ties, rails and beds in Finland. "The formation of deep ground frost under railroads is attributed to the high moisture content of the soil, to the removal of the snow cover and to the traffic. Ground frost does not occur where the soil grain is less than 0.1 mm or the capillarity more than 1.25 m. The effects of ground frost usually were combated by placing temporary wooden wedges between the rails and the cross-ties. The newer methods of control consist of surface and sub-drainage to remove excess water and the substitution of soils subject to frost action with insulating layers of cinders, moss litter, peat and gravel. Recommendations for depths of drainage pipes and insulating soils are given. Raising of the embankment by ballasting is feasible where the freezing is not too severe. Tests have shown that frost action is reduced 50 per cent when 33 per cent more surface gravel is added to the top layer."—SIPRE. Costs of various measures per running meter are compared. Summary in English.

**22943. JARVIK, ERIK, 1907-** . Middle Devonian vertebrates from Canning Land and Wegeners Halvö (East Greenland), Pt. II. Crossopterygii. København, C. A. Reitzel, 1950. 132 p., illus. (incl. sketch map), 24 plates. (Meddelelser om Grønland. Bd. 96, nr. 4) Reprinted as Copenhagen. Universitet. Mineralogisk-geologiske museum. Communications paléontologiques, 1950. No. 72.

Based on materials collected by the Danish expeditions to East Greenland 1936-38, under Lauge Koch from the western part of Canning Land along Nathorst Fiord and from Wegener's Peninsula. Detailed description of the fossil fish *Gyroptychius groenlandicus* n. sp., brief discussion of other fossil material, remarks on stratigraphy, and a bibliography (70 items).

**Copy seen:** DGS.

**22944. JARVIK, ERIK, 1907-** . Note on middle Devonian crossopterygians from the eastern part of Gauss Halvö, East Greenland. With an appendix: An attempt at a correlation of the upper Old Red Sandstone of East Greenland with the marine sequence. København, C. A. Reitzel, 1950. 20 p., illus. (Meddelelser om Grønland. Bd. 149, nr. 6). Issued also as Copenhagen. Universitet. Mineralogisk-geologiske museum. Communications paléontologiques. No. 73.

Results of the Danish expeditions to East Greenland 1936-38, under Lauge Koch; brief description of fossils *Gyroptychius groenlandicus* Jarvik, and some

cleithra not referable to this species, from Kap Franklin region, definitely proving that the continental deposits in the area are of middle Old Red Sandstone age; discussion of correlation (in appendix) and a bibliography (39 items).

**Copy seen:** DGS.

**22945. JARVIK, ERIK, 1907-** . On the fish-like tail in the ichthyostegid stegocephalians, with descriptions of a new stegocephalian and a new crossopterygian from the upper Devonian of East Greenland. København, C. A. Reitzel, 1952. 90 p. illus., 21 fold. plates, map. (Meddelelser om Grønland. Bd. 114, no. 12). Results of the Danish Expeditions to East Greenland, 1947-51 under the leadership of Lauge Koch.

Contains a detailed study of the tail, and descriptions of the skull and postcranial skeleton of the amphibian family Ichthyostegidae, the oldest known tetrapods, found in upper Devonian beds of the Kejser Franz Josephs Fjord region (Ymer Island and Gauss Peninsula) of East Greenland. Describes *Acanthostega gunnari*, n. g. n. sp. for which a new family, Acanthostegidae is erected, and a new crossopterygian fish, *Eusthenodon wängsjöi* n. g. n. sp. found with the new amphibian. Bibliography (72 items).

**22946. JEFFERS, KARL B.** Arctic mapping surveys. (U. S. Coast and Geodetic Survey. Journal, Dec. 1951. no. 4, p. 23-31, incl. illus.)

"The field work of the CGS near Point Barrow (Alaska) from 1945 through 1951 included the establishment of a system of marked triangulation stations, topographic compilations of the shoreline areas from aerial photographs and hydrographic surveys of the inshore areas. The organization, development of procedures, and the outfitting of the party are briefly outlined. Triangulation and inshore hydrographic surveys along 350 mi. of coast were completed by 1951. Final operations were scheduled for 1952."—SIPRE.

**Copy seen:** DLC.

**22947. JEFFERS, KARL B.** Operation Coldfoot. (Surveying and mapping, Oct.-Dec. 1952. v. 12, no. 4, p. 404-412, illus., sketch map)

Contains an account of the "Arctic Project" of the U. S. Coast and Geodetic Survey in the Point Barrow region. The Survey's mission is stated: to

establish a permanent system of geodetic control around the perimeter of Alaska, to execute photogrammetric and hydrographic surveys and collect data on tides, currents and geomagnetism. The northern Alaskan coast represents the last phase of this mission. A general description of the region and its inhabitants is given. The types of vehicles (Diesel caterpillar tractor train, weasel, snow-jeep) and housing (Jameson hut and wanigans) are characterized, transportation and shelter being basic factors in the operation. Boat types and their uses are discussed, also limited use of aircraft. Camp, food and safety measurements for personnel are noted. Field work: its seasons, triangulation operations, hydrographic surveys are outlined. The "Arctic Project" initiated in 1945 is expected to be completed in 1953.

**Copy seen:** DLC.

**22948. JEFFERS, KARL B.** Triangulation parties conquer Arctic to map Alaska. (Civil engineering, Feb. 1951. v. 21, no. 2, p. 34-37, illus., sketch map).

On the work of the U. S. Coast and Geodetic Survey in northern Alaska 1945 and 1948, with useful information on automotive transportation and vehicles, special housing units, the best seasons for work, the "special type of station mark developed for control points in frozen ground", and the hydrographic work in open-water season.

**Copy seen:** DLC; DGS.

**22949. JELSTRUP, HANS S.** Sur les déterminations astronomiques Norvégiennes dans l'Arctique. (Finland. Geodetiska institutet. (Suomen Geodeettisen Laitoksen) Julkaisuja, 1949. no. 36, p. 81-90) **Title tr.:** On the astronomical determinations of the Norwegians in the Arctic.

Contains a brief review of astronomical determinations of geographical positions, made by Norwegians. The account begins with the earliest references found in old chronicles "Kongespeilet" and "Flatöybok" and closes with the year 1935. Methods and instruments used are noted as well as expeditions, explorers and main results. Bibliographical footnotes.

Contains discussion of the physiographic evidence which indicates that more than one advance of ice from the continental mainland reached as far north as Viscount Melville Sound, and that probably only local glaciation occurred in the highest parts of the northern islands. Bibliography (7 items).

**Copy seen:** DGS.

**22956. JENSEN, ADOLF SEVERIN, 1866-**, and BØRGE FRISTRUP. Den arktiske klimaforandring og dens betydning, særlig for Grønland. (Geografisk tidsskrift, København, 1950. Bd. 50, p. 20-47, illus.) **Title tr.:** The change of climate in the Arctic and its significance, especially for Greenland.

"The amelioration of the weather in the Arctic during the last 3 decades has

effected numerous changes, including the ice conditions in arctic seas. The ice area within the U.S.S.R.-sector of the Arctic decreased by more than 1 million sq. km. from 1914 to 1944. The sailing season in Spitsbergen lengthened from a yearly average of 94 days during 1907-17 to 175 days during 1930-38. Floating ice and drift ice are diminishing in different parts of Greenland where fiord ice is forming later and breaking earlier. The thickness of 1-yr. old sea ice along one route diminished from 231-258 cm. during 1893-96 to 186-204 cm. during 1937-40. Hydrographical observations conducted in the Greenland fiords are reported. Glaciers have retreated or disappeared in Greenland. Information on changes in the distributions of flora and fauna is presented, and effects of climatic change upon the life of the Greenlanders are briefly discussed."—SIPRE. Bibliography (85 items). Summary in English.

**22962. JENSEN, RALPH C.** How wells are drilled in permafrost. (World oil, Dec. 1952. v. 135, no. 7, p. 152, 154, 157-58, illus., sketch map)

Contains a discussion of some problems encountered in the exploration program of the U. S. Naval Petroleum Reserve, no. 4 in Northern Alaska. Following remarks on the general nature of permanently frozen grounds, its classification and distribution in Alaska, author dis-

cusses procedures in setting pilings in permafrost, and use of timber mats where pilings are impractical. Concrete and cement mixtures suitable for the area are noted; special problems encountered in drilling (constricting formation of ice, casing collapse) are outlined and the solutions worked out at the Reserve. Tests of clothing, transport and housing equipment, are noted finally as part of Armed Forces contribution to year-round life and work in the Arctic.

**22963. JERNSTRÖM, ANDERS MAURITZ, 1837-1877.** Material till Finska Lappmarkens geologi, 1. Utsjoki och Enare Lappmarker. (Bidrag till kännedom af Finlands natur och folk, 1874. 21, p. 93-229, incl. fold. table) *Title tr.:* Material for the geology of the Finnish Lappmark, 1. Utsjoki and Inare Lappmark.

Introductory remarks on gold finds in Norwegian Finnmark and Finnish Lappmark (especially Ivalo valley); and the author's trip with a gold-prospecting party to parts of Finnish Lappmark north of Rovaniemi in summer 1868, and as a mountain engineer to Kitinen valley in 1871 and to Utsjoki and Inare Lappmark in 1872. He describes the granite massif of the Puolmak region, the gneiss field of the Utsjoki valley; remarks on the granulitic formation and schists in Lappmark and gives a retrospective survey of geotectonic conditions. A table shows gold production for 1870-73.

Describes phonetics, grammar, and many words of the language of the Koyukon Indians of Alaska.

*Copy seen:* DLC; DSI-M.

**22968. JETTMAR, KARL.** Zu den Anfängen der Rentierzucht. (Anthropos, Ephemeris, 1952. Bd. 47, no. 5-6, p. 737-66) *Title tr.:* On the beginning of reindeer-breeding.

*Contains* a critical evaluation of a new theory, that of M. G. Levin and G. M. Vasil'evich, on the origin of reindeer domestication. This postulates that the dog was domesticated earlier than reindeer, and that domestication of the latter had two points of origin: (1) Samoyedic in the Sayan Mts. under the influence of horse-breeding among the neighboring Turks, and (2) Tungusian or Transbaikalian, influenced by the horse-breeding Mongols; that the process started in both places independently and almost at the same time, around 1000 A. D. The theory is based on research into the history of the dog sledge. Some archeological and historical documents, however, do not support this date attributed to the origin of the reindeer-breeding. The theory, Jettmar concludes, is on the whole, of great importance: reindeer-breeding is perhaps old, but it has had scarcely any decided influence

on the domestication of other animals. Extensive bibliography is appended.

**22985. JOHANSSON, OSCAR VILHELM, 1878-** . Dämpfande Wirkungen des Schnees und Eises auf die Lufttemperatur. Helsingfors, 1913. 64 p. tables. (Finska vetenskaps-societeten. Översigt af förhandlingar, 1912-1913, Afd. 55A, no. 11) *Title tr.*: The dampening effect on the air temperature of snow and ice.

*Contains* a study of the influence of snow cover and ice cover on climate, especially their modifying effect upon air temperature during the melting period. The account is based largely on conditions in Finland (with data for Sodankylä), but other areas (including North American) with available meteorological data, are included for comparison. The effect of snow and ice melting is analyzed for various geographical latitudes, including some above the Arctic Circle.

**22986. JOHANSSON, OSCAR VILHELM, 1878-** . Isförhållandena vid Uleåborg och i Torne älv. Helsingfors, 1932. 45 p., tables. (Bidrag till kännedom af Finlands natur och folk. Häfte 84, no. 3) *Title tr.*: Ice conditions at Uleåborg and on Torne River.

Part 1 (p. 1-19) deals with ice conditions in the harbor of Oulu (Uleåborg 65°03' N., 25°35' E.) and on Ule River. Pt. 2 (p. 19-44) summarizes from 18th-19th century records, data on freeze-up and break-up on rivers draining southward into Gulf of Bothnia. Includes also comparative data for several Finnish and Russian northern rivers. Tables show the variations in ice conditions year by year and in periods of years. Bibliography (20 items).

*Copy seen:* DLC.

**22987. JOHANSSON, OSCAR VILHELM, 1878-** . Meteorologiska och geofysiska data för Sodankylä. Helsingfors, 1917. 87 p. tables. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1916-1917, Afd. 59A, Matematik och naturvetenskaper, no. 8) *Title tr.*: Meteorological and geophysical data for Sodankylä.

*Contains* data for Sodankylä (67°26' N., 26°34' E., a Finnish station in the First International Polar Year Program 1882-83), also comparative data from a few other stations on atmospheric pressure, air temperature, humidity, cloudiness, wind velocity and direction, soil temperature, magnetic declension, atmospheric electricity. Most observations are for the periods 1882-84 and 1908-1915.

**22990. JOHANSSON, OSCAR VILHELM, 1878-** . Om vindförhållandena i Fennoscandia. Helsingfors, 1920. 66, 11, 3 p. maps, incl. 1 fold., tables. (Geografiska föreningen i Finland. Meddelanden, Bd. 11, no. 1) *Title tr.*: On wind conditions in Fennoscandia.

*Contains* accounts of the annual mean

wind direction (p. 1-35) and monsoon-like phenomena in Fennoscandia (p. 35-61), based on literature and author's own work. The great difference in wind velocity between the coast and the interior, effect of the mountains, the east winds, continental and oceanic climatic areas, temperature, etc., are discussed in the first section; the second section deals with occurrence of monsoons; their deviations; causes; comparison with European and general conditions. Bibliography (48 items). Summary (and addendum 3 p.) in German. *Copy seen:* DLC.

**22991. JOHANSSON, OSCAR VILHELM, 1878-** . Über die anemometrischen Windstärkemessungen in Finland. Helsingfors, 1906. 56 p. tables. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1905-1906. Bd. 47, no. 18) *Title tr.*: On anemometric measurements of wind velocity in Finland.

*Contains* a report on a (then) recently made reduction of wind velocity measurements to absolute standards and a critique of this conversion. The report covers primarily Helsinki and deals with earlier observations and conversions and their evaluation, monthly and annual averages and daily course of wind velocity, etc. Similar data are given from four other stations, including Sodankylä (67°24' N. 26°36' E.) the Finnish station in the First International Polar Year program 1882-83.

**23005. JOHNSON, ROBERT EUGENE, 1911-** , and R. M. KARK. Environment and caloric requirements. (Federation proceedings, Mar. 1947. v. 6, p. 138)

Contains an analysis of information from various parts of the world (representing six types of climate, including the Arctic and sub-Arctic) on the food which soldiers choose to eat. The data show that the voluntary caloric intake increases with the decrease of environmental temperature.

**Copy seen:** DLC.

**23006. JOHNSON, ROBERT EUGENE, 1911-** , and others. Metabolic changes in heat acclimatized men during abrupt exposure to a very cold climate. (Journal of clinical investigation, July 1949. v. 28, p. 792) Other authors: C. G. Bly, R. M. Kark, and C. Frank Consolazio.

Contains a study on 32 young men acclimatized for six months to Florida and taken by air, in January, to a sub-arctic area. They were intensively studied for the first 24 hours and less so for 11 more days. Responses during the first 24 hours are presented; most of

the subjects reverted to normal after 48 h.; statistically significant responses in the last six days are also quoted. The changes showed many similarities to those following injection of adrenocorticotrophic hormone and to the "general adaptation syndrome" during stress.

**23016. JONES, DON A.** Steam boiler for arctic surveys. (U. S. Coast and Geodetic Survey. Journal, Dec. 1951. no. 4, p. 147-49, incl. illus.)

"Permafrost is an obstacle to arctic survey operations such as the setting of survey station marks, reference marks, base line stakes, and building and bracing of survey signals during the summer. A portable steam boiler and steaming bar, used to overcome this obstacle by thawing a hole into the frozen ground, are described. The steaming bar is a hollow iron bar, 1.5 in. in diameter and 6 ft. long. It has a connection for a steam hose and handle at one end, and a wedge-shaped point at the other end. Approxi-

mately 15 min. are required to steam in a 3 in. x 6 ft. iron-pipe station mark. The boiler is of the water-tube type, weighs 160 lbs., and provides a pressure range of between 20-60 lb./sq. in. The fuel consumption is 3 gal./hr. using diesel oil. The boilers are mounted on improvised, low, wooden sleds. Operating details are given."—SIPRE. **Copy seen:** DLC.

**23017. JONES, DON A.** Tractor trains in the Arctic. (U. S. Coast and Geodetic Survey. Journal, Dec. 1951. no. 4, p. 33-37, incl. illus.)

"Experiences encountered during a move of a base camp consisting of 400 tons of equipment and supplies for 100 mi. along the Alaska north coast are described. The move was made during Feb. and March. Transportation equipment consisted of three heavy Caterpillar diesels, one International tractor-crane, and several Weasels. The cargo was carried by three large pipe sleds, three timber go-devil sleds, two cook wanigans, and numerous light sleds and trailers. The trail was marked by small tripods and flags stuck in the snow at turns and short intervals. The trains traveled on as smooth, ground ice as possible, avoiding sandspits and tundra. Methods of securing the loads and connecting the sleds are described."—SIPRE.

**23020. JONES, MARK WALLON, 1916-** . Thickness of winter F-layer in polar regions. American Geophysical Union. Transactions, 1950. v. 31, p. 187-90, illus., table)

"The semi-thickness of the F-layer, as calculated by the Booker-Seaton method, for the winter months at College, Alaska, decreased from a monthly mean of 24 km. for the year 1941-42 to 13 km. for 1943-44. This decrease in semi-thickness is coincident with the decrease in total sunspot number. For October to December, 1948, the mean semi-thickness was 60 km. and the five-fold increase in semi-thickness is believed to be coincident with the increase in sunspot number."—Author's abstract.

**Copy seen:** DLC.

**23021. JONES, MARK WALLON, 1916-** , and J. G. JONES. Tidal effects in the ionospheric F-layer. (Journal of meteorology, Feb. 1950. v. 7, p. 14-20, illus.)

"Solar and lunar diurnal and semi-diurnal tides in the thickness of the ionospheric F-layer at College, Alaska (near Fairbanks) observed during the winter of 1948-1949 are analyzed, discussed and illustrated by numerous graphs. Methods of harmonic analysis, and theoretical considerations are treated. The diurnal lunar wave is found to be the most pronounced at this latitude (64° N.), and the sign of this wave corresponds to the sign of the lunar declination."—*Meteorological abstracts and bibliography*, May 1950, v. 1, no. 5, p. 289.

**23039. JUTILA, K. T.** Alfred Oswald Kairamo. (Suomen maatoloustieteellinen seura. Aikakauskirja, 1939. v. 11, no. 1, p. 1-8, illus.)

Contains the text of a speech in memory of A. O. Kairamo 1858-1938, giving account of his life and studies, especially in botany; his plant-ecological investigations in Finland, Lapland and Kola; his public activities; services to agriculture, etc.

**Copy seen:** DLC.

**23040. JUTILA, K. T.** Tutkimuksia Perä-Pohjolan ja Lapin talous- ja asutusoista, 1. Luonnontieteellis-taloudellinen yleiskatsaus. Helsinki, 1926. 121 p., fold. map, tables. (Acta forestalia fennica, 28:1) **Title tr.:** Researches into the economic and colonization conditions of Perä-Pohjola (the far North) and Lappi (Lapland), 1. Natural scientific and economic survey.

The area surveyed by the author comprised seven parishes in Finland (shown on map) between 70°05' and 66°04' N. lat. He gives data on "natural conditions": geographic characteristics, climate, resources, etc. Factors affecting arctic agriculture are presented: "such as geographical position, area,

elevation, configuration of the surface, description of rock, kinds of earth, water courses, climate, soil, vegetation, flora, and fauna." Social and economic conditions are analyzed (p. 41-113) in terms of population, vital statistics, Finns, character and customs of the Lapps in the far North; government ownership of land, communications, wages, animal husbandry and principal crops; as well as industries, such as hunting, fishing, trading, and mining. Recommendations are given for development of the area. Bibliography (130 items). Summary in English. **Copy seen:** DLC.

**23041. JUTILA, K. T.** Tutkimuksia Perä-Pohjolan ja Lapin talous-ja asutusoista, [2]. Varsinaisen itsehoidetun maatalouden pääomasuhteista. Helsinki, 1921. 239 p., tables. (Acta forestalia fennica, 18:3) **Title tr.:** Researches into the economic and colonization conditions of Perä-Pohjola (the far North) and Lappi (Lapland), [2]. Capital investment in owner-operated farms.

The capital value of livestock, equipment, savings, land, and buildings in East Lapland, West Lapland and the region farther north around Inari are tabulated and compared. Holdings are divided into five classes. Statistics show relationships between the value of farming equipment per head of stock, per hectare of farm land, crops or pasture; also value of stock per 100 hectares of farm land, pasture, crop and cropland; and value of stock and buildings per hectare of farm land, pasture, crops and cropland. Summary in German, p. 219-34; Finnish-German glossary, p. 235-39.

**23042. JUTILA, K. T.** Tutkimuksia Perä-Pohjolan ja Lapin talous-ja asutusoista, 3. Maanviljelyksestä. Helsinki, 1926. 144 p., tables, fold. map. (Acta forestalia fennica, 1925. 28:2) **Title tr.:** Researches into the economic and colonization conditions of Perä-Pohjola (the far North) and Lappi (Lapland), 3. Plant cultivation.

The statistics are based on visits to 154 farms; climatic conditions and gardening are described briefly, and (in more detail) cultivation of arable land and natural meadows, also clearing and cultivation of new lands. Information on fertilizers used, crops, meadows on dry land, flood meadows, peat-bog meadows, clearing of land on mineral soil and on peat bogs, injurious insects and plant

diseases, costs of land clearing are given. Map shows "the northern limits of the general and accidental cultivation of certain cultivated plants and the holdings investigated." Bibliography (40 items). Summary in English.

Aikakauskirja, 1941. v. 13, no. 2, p. 81-95, tables, diagrs.) **Title tr.:** The formation of frost on cultivated lands and the effect of drainage on the formation and thawing of frost.

"The formation of ground frost depends on the temperature of air, depth and density of the snow cover, type and size of soil grains, type of vegetative cover, depth of ground water, soil moisture and the latent heat of the soil. Experiments of the effect of ground water and soil moisture upon the frost

penetration have been inconclusive. Recent experiments showed that a field saturated with water from an open ditch was frozen 10-15 per cent deeper than a similar field which had subsurface drainage. The results tend to indicate that the difference in freezing was caused by a smaller amount of ground water in the drained fields. Further investigations are needed for verification, as other factors are involved. The freezing of fields surrounded by open ditches is accelerated by the rounded form of the plots and by the greater heat conductivity in and near the ditches. The layer of frozen ground is not dense in the drained fields because the amount of ground water is smaller. Meltwater can penetrate the frozen ground layer in the spring and quicken the melting process."—SIPRE.

**23050. K...I, L.** Finno-Ugorskoe plema. (In: Entsiklopedicheskii slovar', 1890-1904. v. 36, p. 9-12) **Title tr.:** The Finno-Ugrian tribes.

Account of this group of nomadic peoples, which includes Samoyeds, Lapps, Ostyaks, distributed from northern Scandinavia and the Baltic to central and eastern Russia; their various types and dialects; their migrations and successive settlements as traced on the basis of linguistic data (names of geographic features, etc.); their earthen huts and means of livelihood: hunting, fishing, cattle- and reindeer-breeding; social and political organizations; religious beliefs, the *Noita*=shaman, nature deities and ancestor worship; their physical characteristics; domestic life, clothing, etc.; influence of neighboring peoples on their culture. **Copy seen:** DLC.

**23051. KACHURIN, S. P.** Frozen grounds recede. (Akademika nauk SSSR. Comptes rendus (Doklady), 1938. nouv. ser., v. 19, no. 8, p. 595-99, diagr.)

"An investigation was made in 1937 by the Committee for the Study of Permafrost to determine the extent of permafrost degradation since [Middendorff's observations,] 1843 in the central areas of Yenisey. It was found that the southern permafrost boundary lies from 250 to 300 km. south of Turukhansk [ca. 65°47' N. 87°54' E.]. Small isolated areas of permafrost were found between the southern permafrost boundary and Turukhansk. This type of sporadic permafrost was most frequently encountered at a depth of 0.5 to 1.5 m. in the vicinity of Dashkino and Malimye lakes. Observations of sporadic permafrost at a depth of 10 to 11 m. indicated that the temperature continued to decrease. A comparison of 1937 data with Middendorff's 1843 data indicates a slow but steady

degradation of the permafrost of western Siberia."—SIPRE. **Copy seen:** DLC.

**23077. KALELA, ERKKI K.** Vakuutetuissa metsissä vuosina 1925-34 sattuneista kuloista. Helsinki, 1937. 55 p., maps, tables. (Acta forestalia fennica, 46:2) **Title tr.:** Fires that occurred in privately insured forests 1929-34.

**Data** on earlier publications on fires in privately (i. e. not state)-owned forests; statistics on fires 1925-34; and the local occurrence of fires including starting, burning, and spreading danger of fires by area in Finland. Summary in German, p. 48-55.

**Copy seen:** DLC.

**23078. KALELA, OLAVI.** Einige Konsequenzen aus der regionalen Intensitätsvariation im Massenwechsel der Säugetiere.

tiere und Vögel. Helsinki, 1951. 31 p. tables, diagrs., map. (Suomalainen eläin- ja kasvitieteellinen seura vanamo. Eläintieteellisiä julkaisuja, osa 14, no. 5) **Title tr.:** Some consequences of the regional intensity-variation in the mass change of mammals and birds.

**Contains** an analysis showing that the numerical reliability of animal population-statistics depends on regional differences, specifically on the fact that short-term fluctuations in the numbers of many animals weaken from the arctic areas towards the south. The study is based on several sources and is primarily concerned with population statistics of Norway, Finland, Labrador and Greenland. Species of fox form the main object of the analysis. Bibliography (29 items). Summary in English.

**Copy seen:** DLC.

**23079. KALELA, OLAVI.** Tunturisop-  
ulin vauelluksista ja niiden biologisesta  
merkityksestä. (Luonnon tutkija, 1950.  
v. 54, no. 1, p. 1-5, illus., maps) **Title**  
**tr.:** The migrations of the arctic plateau  
lemming and their biological significance.

**Contains** data on the characteristics of  
lemmings (*Lemmus lemmus*) on the basis  
of their migrations during 1894-95,  
1902-03, 1907, 1930, 1937-38, 1941-42,  
and 1945-46 in Finnish Lapland. Data  
also on the migrations of the snowy owl,  
red starling and the crossbill. Maps  
show the areas of migration.

**Copy seen:** DLC.

**23080. KALELA, OLAVI.** Über die  
"Lemmingjahre" 1937-38 in Finnisch-  
Lapland, nebst einigen Bemerkungen  
zur Frage der Massenzunahme und  
Ausbreitung. Helsinki, 1941. iv, 74 p.,  
illus. (map, tables). (Suomalainen eläin-  
ja kasvitieteellinen seura vanamo. Eläin-  
tieteellisiä julkaisuja, osa 8, no. 5) **Title**  
**tr.:** On the "lemming years"  
1937-38 in Finnish Lapland, with some  
remarks on population increase and  
dispersal.

**Following** a characterization of a  
"normal" distributional pattern of the  
lemming in the area and their earlier  
migration year, the author describes for  
1937-38: the population growth in the  
spring of 1937, the migration period  
during the early part of the year, the  
rest period of midsummer and a fall  
migration, 1938, noting the end phases  
and direction of migration. He discusses  
the reproductive relationships and place

of growth and the relation of meteorolog-  
ical conditions and increase-rhythm to  
the population growth and migration.  
The parallel and subsequent appearances  
of other rodents, certain rapacious mam-  
mals and birds, and woodland birds are  
noted in relation to lemming increase.  
The larger problem of extension of habitat  
by virtue of population increase, is con-  
sidered finally as well as the general  
question of increase and migration.  
Bibliography (71 items). Summary in  
Finnish.

zität im Massenwechsel arktisch-hoch-  
boreale Kleinnager. (Suomalainen eläin-  
ja kasvitieteellinen seura vanamo. Tied-  
onannot ja pöytäkirjat, 1948. No. 3,  
p. 169-78, tables, diagrs.) **Title tr.:**  
On the periodicity in the mass-changes of  
the arctic-high boreal, small rodents.

**Contains** an analysis and discussion  
of the periodicity of very high population  
numbers among small arctic rodents  
(especially lemmings), and other arctic  
animals, such as foxes. The different  
cycles (4 and 10 years, 3½ and 10 years,  
etc.) in various species and the inter-  
relationships of cycles between the  
species are studied; the parallelism with  
the ten-year cycle in the rejuvenation  
process of pines in Finland is also touched  
upon. Bibliography. (about 20 items).

**23083. KALIMA, JALO, 1884-1952.**  
Bibliographie der finnisch-ugrischen

Sprach- und Volkskunde für das Jahr 1903. (Finnisch-ugrische Forschungen, 1908. Anzeiger, Bd. 8, no. 1-3, p. 1-161) **Title tr.:** Bibliography of the Finno-Ugric linguistics and folklore for 1903.

*Contains* among others, works on the Lapps (p. 83, 135-36), Zyryans (p. 90-94), Ostyaks and Voguls (p. 86-103, 136-37). This is a continuation of an annual bibliography initiated in 1900 by E. N. Setälä, q. v.

**Copy seen:** DLC; InU.

**23084. KALIMA, JALO, 1884-1952.** Bibliographie der finnisch-ugrischen Sprach- und Volkskunde für das Jahr 1904. (Finnisch-ugrische Forschungen, 1909. Anzeiger, Bd. 9, no. 2-3, p. 33-199) **Title tr.:** Bibliography of the Finno-Ugric linguistics and folklore for 1904.

*Contains* among others, works on Lapps (p. 115-18), Zyryans (p. 122-24), Voguls and Ostyaks (p. 126-32).

**Copy seen:** DLC; InU.

**23085. KALIMA, JALO, 1884-1952.** Etymologische Streifzüge. (Finnisch-ugrische Forschungen, 1923-24. Bd. 16, p. 64-74) **Title tr.:** Raids for etymologies.

*Contains* among other things the etymologies of: Lapp *kalugere* (go away), *pääsi* (to sweep); Zyryan *meg* (roundabout way); Ostyak word for a constable.

**Copy seen:** InU.

**23086. KALIMA, JALO, 1884-1952.** Die russischen Lehnwörter im Syrjänischen. Helsingfors, Suomalais-ugrilainen seura, 1910. 187 p. (Suomalais-ugrilainen seura. Toimituksia, no. 29) **Title tr.:** The Russian loan words in the Zyryan language.

Russian influence has been very great on the Zyryans and is obvious in all the branches of their cultural life. Loan words from the Russian are numerous, though this influence is not very old. The adoption of Russian words has been common since the 14th century, due to the political subjugation of the Zyryans to the Russians of Novgorod, and through the influence of the Orthodox Church. Formerly the Zyryans lived more to the South, and the migration to the North began between the 8th and 12th centuries. Even in the 20th century there are still some Zyryans living in the north-western part of the Perm government and in the northern part of Vjatka government. **Copy seen:** DLC; InU.

**23087. KALIMA, JALO, 1884-1952.** Syrjänisches Lehngut im Russischen. (Finnisch-ugrische Forschungen, 1927. Bd. 18, p. 1-56) **Title tr.:** Zyryan loans to the Russians.

*Contains* a linguistic study of loan words (following a survey of earlier work by A. J. Sjögren, M. Weske, and A. L. Pogodin). 51 cases of common sounds in Zyryan and Russian are indicated, and a vocabulary with linguistic analyses given of words taken over by the Russians from the Zyryan language (p. 14-51). The greatest number of loan words concern geographic features, e. g. a spring, creek, iron-rich morass, etc. Terms for agricultural and cattle-breeding objects are more numerous than those for hunting and fishing. The Zyryan words became popular with the Russians in the Ural region, and were carried further eastwards to Siberia. The territory inhabited by the Zyryans, according to the toponymies, formerly was around the mouth of the Northern Dvina. Later the Zyryans traveled to the Omega region, to Kola Peninsula in the West, and to the upper course of the Ob' and Katusin in the East. They migrated, not as a body but sporadically and usually were absorbed and lost their language in these regions already densely populated. The name "Zyryan" is of Ob'-Ugrian origin, cf. Vogulian and Ostyak *saran*, or *sarajax* = "a Zyryan."

**23090. KALITIN, NIKOLAI NIKOLAEVICH, 1884-1949.** Quelques données sur la transparence de la glace pour la radiation ultra-violette du soleil. (Akademiâ nauk SSSR. Comptes rendus, 1935. nouv. ser., v. 4, no. 3, p. 145-46, tables) **Title tr.:** Some data on the transparency of ice to ultra-violet solar radiation of the sun.

Also published in Russian, *Neskol'ko dannyykh o prozrachnosti l'da dlia ul'trafioletrovogo radiatsii solnca*. (Akademiâ nauk SSSR. Doklady, 1935. v. 9, no. 72, p. 137-38, incl. tables.)

"Pure river ice 10 cm. thick, transmitted approximately 98 per cent of solar radiation in the ultraviolet. Ice samples, identical in size, but containing minute air bubbles transmitted about 60 per cent of ultraviolet radiation. The transparency decreased with increase in the thickness of the ice. When a sample of river ice was 107 cm. thick, the transmission of ultraviolet rays dropped to 51 per cent. The rays varied in length from 3320 to 4460 Å."—SIPRE.

Aikakauskirja, 1903, v. 21, no. 6, p. 7-9, also in French on p. 38-39; 1904, v. 22, no. 3, p. 1-2; 1907, v. 24, no. 3, p. 1-3, also in French on p. 32-34; no. 4, p. 1-4, also in French on p. 36-37; 1908, v. 25, no. 5, p. 1-8) *Title tr.:* Report on a trip to the Vogulian country, I-V.

*Contains* brief accounts of the author's travels and results in his expeditions to the Ob'-Irtys' basin during 1901-1907, sponsored by the Finno-Ugrie Society. He worked in the district of Berezovo (mostly), and around Turinsk, also visited villages up the Loz'va, Pelym and other tributaries of the Ob' River system. Results: about 30,000 words from 11

dialects, 150 melodies recorded with a phonograph, 300 photographs, 650 museum objects, and numerous notes on dwellings, clothing, food, social organization, religious beliefs, etc. of the Voguls.

**23117. KANNISTO, ARTTURI, 1874-1943.** Die tatarischen Lehnwörter im Wogulischen. (Finnisch-ugrische Forschungen, 1925. Bd. 17, p. 1-264) *Title tr.:* The Tatar loan words in Vogulian.

*Contains* a linguistic investigation of Tatar influence on the Vogulian language: the Tatar sounds and words borrowed by the Vogulians are quite considerable in number. Author concludes that a total of 508 Vogulian words certainly have been taken from the Tatars, plus 48 uncertain cases. A few borrowings may date from the 14th century, but the bulk of them are not very old. The oldest Tatarian loan words are names for domestic animals, agricultural objects, domestic implements, stimulating beverages, and names for relatives. Obviously the Voguls learned a little agriculture from the Tatars. They were influenced by the Tatars living in Tobolsk government. Some Voguls were subject to the Tatars in the past, and today there are some entirely Tatarized Vogul villages.

**23118. KANNISTO, ARTTURI, 1874-1943.** Ueber die früheren Wohngebiete der Wogulen im Lichte der Ortsnamenforschung. (Finnisch-ugrische Forschungen, 1927. Bd. 18, p. 57-89, map) *Title tr.:* On the former living place of the Voguls in the light of toponymic research.

The small and dying-out Vogulian people (about 5,000) live now in two separated branches eastwards of the Ural Mountains: the larger northern group live in the region of the Northern Sos'va River, on the banks of the upper and middle Konda, on the Pelymka River northward from Verch-Pelymsk, and on the Vagilsk and Loz'va Rivers; the smaller southern group consists of a few villages, situated to the north of the middle Tavda River. Formerly the Voguls inhabited a much larger region. Place names, of which 262 are investigated in this paper, help to determine the former Vogulian territory. The Ob'-Ugrians formerly lived much more to the South and West, and later were pushed by the Russians and Tatars from the

region between Pinega and Konda to the Irtysh and Ob'. *Copy seen:* DLC; InU.

**23119. KANNISTO, ARTTURI, 1874-1943.** Ueber die Tatuierung bei den Ob-ugrischen Völkern. (Suomalais-ugrilainen seura. Toimituksia, 1933. no. 67, p. 159-85, 55 drawings) *Title tr.:* On tattooing among the Ob'-Ugrian peoples.

Among all the Finno-Ugric peoples, only the Ostyaks and Voguls tattoo the skin, usually on the arms and legs, sometimes the face. It is done by the women chiefly as ornamentation, and by men as a cure (e. g. for rheumatism), the bleeding having a therapeutic effect. Technique: a pattern is painted on the skin with greasy soot, then pointed with a needle. The designs are geometric, or represent various birds or family marks which Ostyaks use as a signature on documents. Tattooing is well known in northern Asia among the Chukchis, Koryaks, Kurils and Ainu. The Lapps of Kola Peninsula consider soot a good remedy for fresh wounds.

**23123. KANNISTO, ARTTURI, 1874-1943.** Der Wogulenfürst *Asyka* in Chroniken und Volkstradition. (Finnisch-ugrische Forschungen, 1914. Bd. 14, p. 18-30) *Title tr.:* The Vogulian prince *Asyka* in the chronicles and folk tradition.

*Contains* an historical review of the subjugation of the Ugric peoples by the Russians from the 11th century. The Voguls and Ostyaks long resisted the Russians and their allies, the Christianized Zyryans. The activities of the Vogulian prince *Asyka* and his son *Jumshan*, in the later 15th century are outlined here according to the Russian chronicles. The final subjugation of the Voguls and Ostyaks by the Muscovites occurred at the end of the 16th century. The heroic legends collected by Kannisto among the Voguls from Konda River, mention a hero's name which linguistically is identical with *Asyka*.

*Contains* popular account of the route from Vladivostok to Petropavlovsk; description of Kamchatka, its geography, nature and life; its industry and industrial area. Trip through the Kamchatka River valley; account of volcanoes, people, climate, etc. **Copy seen:** DLC.

**23127. KAPTEREV, P. N.** Anabiose im ewigen Eise. (Deutsche Gesundheitswesen, 1947, v. 2, p. 517) **Title tr.:** Anabiosis in the eternal ice.

Report on work done since 1931 in the Soviet Union on reviving organisms enclosed for many thousands of years in mud of the permafrost. Bacteria, algae and some lower organisms have been revived. The medical importance of these studies is found in the possibility that pathogenous agents in buried corpses, may revive in exceptionally warm years and cause infection of waters and epidemics. **Copy seen:** DSG.

**23128. KAPTEREV, P. N.** Experiments in the revitalization of organisms from the permanently frozen subsoil. (Akademiia nauk SSSR. Comptes rendus (Doklady), 1936. nouv. ser., v. 3 (12), no. 3 (98), p. 137-40)

On the basis of experiments made at the Skovorodino station on the Amur Railroad about 53°58' N., 123°57' E., a report is given on organisms revitalized from permafrost soil; includes numerous microscopic algae, fungus hyphae, moss and one lower crustacean. The dissimilarity of the floras from the permafrost layer and the active layer is stressed. **Copy seen:** DLC.

**23129. KAPTEREV, P. N.** New data on revitalization of organisms from perpetually frozen grounds. (Akademiia nauk SSSR. Comptes rendus (Doklady), 1938. nouv. ser., v. 20, no. 4, p. 315-17)

Results from second series of experiments on revitalization of organisms

from permafrost layers at the Skovorodino permafrost station on the Amur Railway. Bacteria, numerous algae, protozoa and one crustacean were "revived" and identified.

**Copy seen:** DLC.

**23130. KAPTEREV, P. N.** Ob anabioze v usloviakh vechnoi merzloty. (Akademiia nauk, SSSR. Izvestiia. Otdelenie matematicheskikh i estestvennykh nauk. Seria biologicheskai, 1936. no. 6, p. 1073-88, illus.) **Title tr.:** Anabiosis in the conditions of permafrost.

*Contains* the results of experimental study of anabiosis of animals and plants, carried out at Skovorodino permafrost research station (on the Amur Railway, 53°58' N., 123°57' E.) in 1934-36; samples taken at the depth of 2-4 m. contained various green algae, desmids, diatoms and some mosses which were re-animated at the temperature 110° C.

*Contains* results of a study of aromatic lichens with a view to their utilization in the perfume industry as the source of aromatic oils; general data on chemical composition, technology and world regions for gathering these lichens; an enumeration of 10 species with data on systematics, morphology, distribution, ecology, chemical properties and uses; including *Evernia prunastri* occurring in the tundra zone of European U.S.S.R. Bibliography (70 items).

**Copy seen:** MH.

**53132. KARELO-MURMANSKIĬ KRAĬ.** Kraevedcheskii, obshchestvenno-ekonomicheskii, illiustrirovannyi zhurnal. Leningrad, 1923-1935.

v. 1-13, no. 9 (1923-Aug. 1935). Issued bi-monthly, two no. to each issue in volumes seen. A popular journal with short articles on the resources and development of Karelia and Kola Peninsula. The articles vary in scope, include news items, propagandist and factual presentation of exploitation projects, mineral and power resources, agricultural developments, utilization of reindeer, etc. Several selected papers from v. 11-12

appear in this Bibliography under their authors' names.

**File seen:** DLC (v. 5, 1927; 11-12, no. 8, 1933-34).

**2133. KARGER, N.** Gilfaki. (*In:* Bol'shaya sovetskaya éntsiklopediia, 1926-47. v. 16, col. 845-48) **Title tr.:** The Gilyaks.

Comprehensive account of these people (said to number about 4000), remnants of an originally central Asiatic group forced northeastward to localities in the Okhotsk seacoast, Sakhalin Island and the lower Amur River; their neighbors, the Tungus and Ainu; genetic relationship to North American Indians; language, folklore, social organizations; fishing as source of food and clothing; recent development of farming, gardening, cattle and horse breeding; traditional underground dwellings and summer huts, clans and domestic life; social culture, religious cults and beliefs; their attitude toward death, etc.; the "new era" settlements, political reorganization, developments in education, culture and health care, etc.

**Copy seen:** DLC.

**2134. KARJALAINEN, KUSTAA FREDRIK, 1871-1919.** Alte Bilder zur Ob-ugrischen Mythologie. Helsinki, 1914. 26 p. 17 illus. (Suomalais-ugrilainen seura. Toimituksia, v. 35, no. 5) **Title tr.:** Old reflections of Ob'-Ugrian mythology.

*Contains* discussion of pictures with which olden-time travelers decorated their narratives. The Ostyaks especially attracted the attention of western travelers in the 16th and 17th centuries. Fabulous stories were told and fantastic pictures added to publications, especially on maps. The famous "golden wife" (*alata* or *zolotaiá baba*), pictured on the maps at the western side of the Ob' River near its mouth (e. g., by Herberstein in 1546 A. D., Wied 1555, Jenkinson 1562, and others) never existed, it is merely a giant rock somewhat similar to a woman with a child on her lap. The chronicle *Kratkaiá Sibirskaiá Letopis*, written by S. W. Remezov, between A. D. 1655 and 1700, includes some twenty pictures of Ostyak, and a few of Vogul life. The author deals with such of these pictures as are connected with the religious beliefs of the Ostyaks. **Copy seen:** DLC; InU.

**2135. KARJALAINEN, KUSTAA FREDRIK, 1871-1919.** K. F. Karjalainen Ostjakisches Wörterbuch. Bear-

beitet und herausgegeben von Y. H. Toivonen, I-II. Helsinki, 1948. xxxv, 1199 p. (Suomalais-ugrilainen seura. Lexica Societatis Fennougricae, 10) **Title tr.:** The Ostyak dictionary of K. F. Karjalainen, revised and edited by Y. H. Toivonen, I-II.

Preface gives an account of the travels of K. F. Karjalainen among the Ostyaks, 1898-1902, and the results; Toivonen's methods in editing the dictionary, the transcription, etc. The extensive Ostyak-German dictionary follows with a German index (p. 1121-99). See also Toivonen's *Türkische Lehnwörter*, 1943-1944.

**2136. KARJALAINEN, KUSTAA FREDRIK, 1871-1919.** Die Religion der Jugra-Völker. Helsinki, Suomalainen tiedeakatemia, 1921, 1922, 1927. 3 pt.: 204, 386, 352 p. 67 illus., map. (Folklore Fellows Communications, nos. 41, 44, 63) **Title tr.:** The religion of the Ugrie peoples.

Pt. 1-2 translated by Oskar Hackman, pt. 3, by Arno Bussenius.

*Contains* (in pt. 1) an introductory sketch, dated June 1917, of the Ostyaks and Voguls, the author's life-long study, particularly during a sojourn among them (roughly) 1898-1903. He is stronger, he states, on Ostyaks than Voguls. Their area is indicated as north of 58° N. lat. from the eastern Urals to the Yenisey, along the Ob'-Irtys and tributary rivers, their numbers: 18,000 Ostyaks, 5,000 Voguls. Their history and migrations are outlined, also the considerable cultural influences of their neighbors, the Zyryans, Samoyeds, Tungus, Tatars and Russians, the latter overwhelming in material culture. A survey of source materials on these peoples (including unpublished documents and archives) completes this introduction (p. 3-22). Then follows discussion, with historical perspective and geographic parallels, of their ideas on creation and the nature of man and his different souls; beliefs about birth and re-birth, name-giving, and (chiefly) death and the dead. The origin of diseases, medical therapy, healing by sacrifices and shamanistic performances, etc., are discussed (p. 78-92). Mortuary customs, rites of purification, mourning customs, burial places, and concept of life after death are described in some detail.

Pt. 2 deals with the world of spirits: household, clan, district or local spirits,

the latter having numerous idols, sacred places, etc., and sacrifices by priests; characteristics of the individual spirits and development of beliefs regarding local spirits are stressed. General (as distinct from local) nature spirits are treated at length, also those of the underworld, diseases (p. 342-70), and demons.

Pt. 3 analyses worship of animals and natural phenomena (sun, moon and stars, thunder and wind, fire); also the sacrificial practices in different parts of the region; bear ceremonial is described in detail (p. 193-235). Taboos regarding women, the shaman, his self-intoxication (with fungi), and his performances are discussed. "The Ugric shaman originally was merely a wise man and divinator, and not a medicine man or sacrificial priest." (p. 328).

**23137. KARJALAINEN, KUSTAA FREDRIK, 1871-1919.** Wie EGO im Ostjakischen die Verwandten benennt. (Finnisch-ugrische Forschungen, 1913. Bd. 13, p. 207-295) **Title tr.:** How one calls relatives in Ostyak.

*Contains* linguistic and social investigation of 51 Ostyak terms for relatives. The terminology is very rich and expresses fine distinctions in the relationship, e. g., different terms are used for cousins on the father's and on the mother's side, for those younger and older than oneself, etc. Most are old and indigenous Ostyak terms without trace of Zyryan or Vogul influence; Tatar influence, however, appears in some eastern dialects. The terms for father, oneself and husband often interfere with each other; the terms for mother and wife, on the contrary, are more isolated, because the womenfolk are strangers who come into one's family.

**23160. KATKOFF, V.** The flounder industry of the Soviet Far East. (Economic geography, Apr. 1952. v. 28, p. 171-80, 3 sketch maps)

Contains a review of past methods and fishing grounds and data on landings, migration and potential catch of flounders in a region which includes the Kamehatkan waters.

**Copy seen:** DGS.

**23161. KATĖS, NIKOLAIĖ IAKOVLEVICH, 1894-**, and S. V. KATĖS. Atlas i opredelitel' plodov i semĕn v torfakh i ilakh. Moskva, Izd-vo Moskovskogo obshchestva ispytatelei prirody, 1946. 140 p., 20 plates. **Title tr.:** Atlas and identification key of fruits and seeds in peats and silts.

Fruits and seeds of 219 species are dealt with, some of them having a partly arctic distribution. This highly specialized monograph has an importance for arctic studies since peats are often located in northern areas.

**Copy seen:** DLC.

**23162. KATĖS, NIKOLAIĖ IAKOVLEVICH, 1894-**. Bolota Sovetskoi Azii, I-II. (Moskovskoe obshchestvo ispytatelei prirody. Biulleten', 1946. Otdel. biol. Novaĭa seriĭa, t. 51, vyp. 2, p. 80-90, text map; (II) vyp. 3, p. 99-108) **Title tr.:** The moors of Soviet Asia, I-II.

Contains (in pt. I) a study of 20 moor zones or "provinces" of Asiatic U.S.S.R., including arctic regions from the Urals to Bering Strait. Region, vegetative cover, land forms, polygonal soils, and peat formation are noted. Island zones (New Siberian Islands and Wrangel Island) are discussed. Sphagnum bogs and marshy tundras of the Chukotsk-Anadyr'-Koryak regions and peat-bogs of Kamchatka Peninsula are described and indicated on map. Part II deals with the regularities in the distribution of moors and peat-bogs (latitudinal zonality) and the factors such as climate, etc., influencing their development (autogenesis). Bibliography (105 items). Summary in English.

**23175. KAZAKOV, A. N.** Osobennosti i raspredelenie saamskikh geograficheskikh nazvaniy Murmanskoi oblasti. (Vsesoyuznoe geograficheskoe obshchestvo. Izvestiia, 1952. t. 84, no. 4, p. 350-62, 7 text maps) **Title tr.:** Peculiarities and distribution of the Lappish geographical names in the province of Murmansk.

Contains discussion on toponyms of the Kola Peninsula: Lappish place names and archeology are the best sources for their history; Russian place names began to penetrate from the 16th century on the line Kanadalaksha-Kola and now prevail along the coast and especially in the

southeastern part of the peninsula; Karelian names dominate in the southwest from Kandalaksha; Zyryan (*izhem-skii*) names have begun to penetrate into the northeastern part since 1888 (see map on p. 351). The Lappish place names have survived mostly in the central part of the Peninsula. Analysis of these Lappish names show how they have been formed: some are of purely physico-geographic origin, some are connected with settlements, or with cult and epics, some originated in the inhabitants' occupations (fishing, reindeer keeping and hunting). **Copy seen:** DLC.

(Acta forestalia fennica, v. 53, no. 1) **Title tr.:** The fertility of drained bogs as shown by their tree-producing capacity, considered in relation to the theory of forest types.

Contains an analysis of A. K. Cajander's theory that particular bog types, after sufficient drainage, develop into certain forest types: poor bogs into poor forest types, better bogs into forests with higher demands. Melin and other Swedish scientists claim however, that the forest type is conditioned by sufficiently rapid and thorough drainage and the complete decomposition of the surface peat. Both viewpoints are analyzed in detail in this paper with conclusion that while complete drainage and decomposition of a good bog-type is essential for producing a good forest, bogs poor in nutrients cannot, within a reasonable time and cost be changed into good forests. This affirms to some extent Cajander's ideas. The study includes forests (and bogs) of arctic areas. Bibliography (over 105 items). Summaries in Swedish and English.

**23199. KERÄNEN, JAAKKO, 1883-** . On frost formation in soil. Helsingfors, 1951. 14 p. (Fennia, v. 73, no. 1)

*"Frost formation in soil is considered as a negative heat phenomenon. The depth of frost penetration is calculated theoretically as a function of the cold stream, the accumulated heat amount, and the volume percentage of water in the soil. Heat accumulated in the soil during the summer creates a flow in the deeper soil layers during the winter. The intensity and capacity of the accumulated*

*heat to thaw frost from below are indicated. Results of observations of temperature and moisture conditions in drained and ditched soil during the winter indicate that thawing from below was greater in the ditched fields. Moisture decreased in passing from the frost layer to the underlying unfrozen ground. Water capillarity in frozen soil, supercooling of soil and the freezing of water pipes are described. The existence of frozen layers in the ground at various depths and their effect on plant growth are discussed."*—SIPRE.

Contains sketch of the work of other

investigators, data on the degrees of frostbite and their frequency in the author's material (which consisted largely of men 20-30 years old); pathology and clinical aspects of his patients; x-ray findings; first aid in frostbite; therapy of various degrees, areas and stages of the disease; discussion of methods applied by various authorities; prophylaxis of frostbite. Bibliography (10 items). This paper (same as *Arctic Bibliography* No. 8650) was published in English translation in E. R. Hope, *Frostbite, translations . . . 1939 & 1944*, 1950, (p. 61-68) q. v. **Copy seen:** DLC.

**23246. KILLERICH, ALF BENTHIN, 1902-** . Hydrographic investigations near Disko (Greenland) in the summer of 1949. (International Council for the Study of the Sea. *Annales biologiques*, 1949, *pub.* 1950. v. 6, p. 33-35, diagsr.)

As expected after the study in summer 1948, investigators found the warm undercurrent colder and no warm water flowing northward as in the previous year; surface waters were cold as a result of the hard winter 1948/49, and prediction for 1950 was more cold water.

**Copy seen:** DF; DSI-M.

**23247. KILLERICH, ALF BENTHIN, 1902-** . Hydrography in the neighborhood of Disko (Greenland) in the summer of 1948, with remarks on the cod-fishery. (International Council for the Study of the Sea. *Annales biologiques*, 1948, *pub.* 1949. v. 5, p. 24-29, map, diagsr.)

Discussion and vertical temperature-salinity diagrams of five sections north and west of Disko, including one in outer Umanaq Fiord, which illustrate the stratification and currents of these waters; conjectures concerning possible relation of northward flow of warm Atlantic water to the cod fishing.

**23249. KILLIAN, HANS, 1892-** . Cold injuries with special reference to German experience during World War II. Aulendorf i. Württ., Ed. Cantor Kg., 1952. 138 l. illus., diagsr., tables. Process print.

Translation completed in May 1952 of selected material from an unpublished monograph covering the period 1941-1949. Funds for this work were made available by the Bureau of Medicine and Surgery, Navy Dept., Washington, D. C.

Contains an account of cold injuries, based on the author's experience with 20,000 cases during the German 1941-42 winter offensive in Russia and subsequent experience till 1949; in two parts: 1 (l. 1-46) *General hypothermia*, has sections on cold injury in past wars and peacetime medical reports on frostbite; factors tending to lower deep and peripheral body temperature; description and pathology of general hypothermia; physiology and pathology of acute hypothermia; treatment of general hypothermia. Pt. 2 (l. 47-112) *Local cold injuries*, has chapters on prerequisites for development of local cold injuries; their classification: frequency, degrees and locations; clinical symptoms; complications; special forms and sequelae; physiology and pathology; therapy (early, late, typical, after-treatment); prevention of frostbite. Bibliography (267 items). In an appendix (l. 125-37) *Cold injuries*, A. R. Behnke discusses German, Russian and American ideas on therapy; factors causing frostbite; cold immersion; prevention research, etc.

Account of a commercial test run of the motor vessel *Alaska*, and king crab fishing in the outer portion of Bristol Bay, Aug. 1-Sept. 5, 1948. Description of the ship under test, including equipment, trawls, refrigeration system and crab-cooking equipment; the areas fished (Bristol Bay and south side of Alaska Peninsula for brief period), with results (including halibut, cod, pollock, and crabs). Notes on biology of the king crab, feeding habits of some of the common fish, operating procedure for crab cooking, suitability of the vessel, and hazards to fishing.

*Tables in Fishery leaflet 330 only, give data recording each bottom drag: location, tide, current, depth, bottom, kinds and sizes of catch, and water temperatures.*

Contains a characterization of freshwater cryptomonads, keys to the genera and species and descriptions of eight species (p. 12-26); followed (p. 26-48) by a study of dinoflagellates (peridians) of the continental basins of this area, with data on characteristics, morphology, biology, ecology, systematics and economic importance. In the special part (p. 49-113) are keys to the classes, suborders, families, genera and species and descriptions of about 60 dinoflagellates, with synonyms, critical notes, references and data on habitat and distribution. Bibliography (about 400 items) and an index of Latin names are appended.

**23285. KLAPROTH, JULIUS HEINRICH, 1783-1835.** Asia polyglotta. 2nd ed. Paris, Heideloff & Campe, 1831. xii, 144, 8 p. **Title tr.:** Multi-lingual Asia.

**Contains** comparative lists of words which the author collected during his travels to Siberia and the Caucasus, or took over from the mss. left by other German explorers, chiefly those of F. G. Müller and Dr. Messerschmidt. A more or less extensive introduction (in German) is given for each people, their area, history, race, mode of life, beliefs, etc., based, the author says "almost always on hitherto unused and mostly native sources" (p. x). In this way he describes and gives lists of words (in the vernacular, preceded and arranged by the German equivalent) of the following (among other) peoples: Samoyeds and their various tribes (p. 138-66), Yeniseians

(p. 166-82), Zyryans (p. 186-87), Ob-Ugrians (p. 188-201, including Messerschmidt's lists of Vogulian and Ostyakian words, noted down in 1725-26), Yakuts (p. 230-31), Tungus (p. 286-92), Yakaghirs (p. 315-17), Koryaks (p. 317-20), Kamchadals (p. 320-22), "Polar Americans" in Asia, i.e. Chukchis and Eskimos (p. 322-25). The author is said to be not always reliable, and suggestions have been made that some of his "Asiatic words" are of his own invention.

**23287. KLEBELSBERG zu THUMBERG, RAIMUND von.** Handbuch der Gletscherkunde und Glacial-geologie. Wien, Springer Verlag, 1948. 1028 p. incl. illus. tables, graphs, diagrs. **Title tr.:** Handbook of glaciology and glacial geology.

A comprehensive treatise on general, historical and regional glaciology. Vol. 1 (general part) deals with (a) glaciology: types of ice, glacier formation, structure, movements, surface, beds, classification, catastrophes, calving, etc.; (b) glacial geology: glacial deposits, moraines, erosions, changes of sea-levels due to glaciation. Vol. 2 (historical-regional part) deals with the Quaternary and pre-Quaternary glaciation of the various continents and includes the following arctic areas: Greenland, the Canadian Arctic Islands and Alaska during the Quaternary (p. 472-90), and Spitsbergen, Franz Josef Land, Iceland, Jan Mayen, Scandinavia and Finland (p. 570-99), the Urals (p. 653-55), Severnaya Zemlya, Novo-Sibirskiye Ostrova and Siberia (p. 754-60) during the same epoch. Brief references to arctic areas are found in the section on pre-Quaternary glaciation (p. 854-912). Bibliography (about 2000 items).

This work is summarized and discussed and additional literature indicated by J.

**Contains** outline of the biology of reindeer and occurrence of various stocks (on the basis of literature and author's observations), particularly the two main breeds in Fennoscandia: the arctic hill (*tunturiporo*) or fjeld reindeer and the forest reindeer. The origin and distribution of this animal are discussed, also

its place in the life of regions on the northern fringe of settlement, particularly that of the nomad Lapps of Kola and Fennoscandia. The care of reindeer, its domestication, spread of its husbandry, economics of reindeer-breeding: meat production and export, dairy products, etc., are dealt with, and statistical data given on reindeer population in various regions. Bibliography (28 items). Summary in German.

Seria biologicheskai, 1937, no. 1, p. 175-88, diagrs.) **Title tr.:** *Boreogadus saida* (Lepech.) and its importance in the biological processes of the Arctic.

Contains the results of the author's investigation of a northern fish, *Boreogadus saida* (arctic cod or "salka") which is a principal source of food for a number of marine vertebrates (beluga, seal, Greenland seal, bearded seal), some birds and some terrestrial animals such as polar bear and arctic fox, etc. The economic importance of *B. saida*, its biology, ecology and distribution in northern seas of the U.S.S.R. is discussed. Summary in French. **Copy seen:** DLC; MH-Z.

**23306. KLUTSCHAK, HEINRICH W.** Als Eskimo unter den Eskimos. Eine Schilderung der Erlebnisse der Schwatka'schen Franklip-Aufsuchungs-Expedition in den Jahren 1878-80. Wien [etc.] A. Hartleben, 1881. 4 p. l., 247, [1] p. incl. front. (port.), illus., plates, maps (2 fold.) **Title tr.:** As Eskimo among the Eskimos. An account of experiences on Schwatka's Franklin Search Expedition during 1878-80.

Contains an account by the artist and cartographer of this expedition mainly of the internal life of the small group (five men), stressing those situations in which men battle the grim elements of the North with indigenous means. The base of the expedition was Camp Daly, northwest coast of Hudson Bay (63°45' N., 90° W.). The party proceeded inland in a northwesterly direction to King William Island (69° N., 97°30' W.) and back (see also Gilder's narrative, *Arctic Bibliography*, No. 5745). Klutschak deals especially with the natives of the area (Netsilik and Igulik Eskimos) describing and illustrating with numerous sketches, various features of their life, their snowhouses (p. 46-47), domestic utensils, food, dress, hunting, sledging, indoor amusements, string figures, song and drum play, etc. He depicts (p. 67-71) the party's observations and conversations in the Eskimo com-

munity regarding the relics from Franklin's ship.

**23310. KNAPP, DAVID G., and E. B. ROBERTS.** Geomagnetism, cosmic and prosaic. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 163-69)

Contains remarks on the importance of geomagnetic research, and on Alaska as an exceptionally favorable area for such work. Contributions of early explorers and the observatory at Sitka in the Russian period are noted; investigations since 1867, the American period, are outlined; and work of the Sitka, College, and Barrow observatories described. Bibliography (13 items).

Contains the results of a study carried out by the author in 1944-47; 205 muskrat carcasses were investigated and 74 per cent were found parasitized by 13 species of internal parasites. Includes a list of about 150 parasites of muskrat reported in literature (table 1), diseases and pathologies, description of some parasites (trematodes, cestodes, nematodes) and a bibliography (55 items).

**23314. KNIPOVICH, NIKOLAI MIKHAILOVICH, 1862-1939.** Einige Worte über das Vorkommen von *Lampris pelagicus* (Gunn.) an den nördlichen Küsten Russlands. (Akademika nauk SSSR. Zoologicheskii muzej. Ezhegodnik

1900. T. 5, no. 1-2, p. 244-45) **Title tr.:** A few words on the occurrence of *Lampris pelagicus* (Gunn.) on the northern coast of Russia.

\* Contains some additional information to the paper of E. Lönnberg, *Lampris pelagicus*, 1900, q. v., on the distribution of this fish in Russian northern waters, found also in Kandalaksha Bay, White Sea. **Copy seen:** DLC; MH-Z.

**23315. KNIPOVICH, NIKOLAI MIKHAILOVICH, 1862-1939, and others.** Èkspeditsiia dlia nauchno-promyslovyykh issledovaniy u beregov Murmana. Tom 1 [-2, chast' 1]. S. Peterburg, T-vo Khudozhestvennoi Pechati, 1902-1904. v. 1, pt. 1-3; v. 2, p. 1: 605, 112, p. illus., plates, diagrs., maps, tables. Further parts of v. 2 evidently were not published) **Other authors:** K. P. Iagodovskii and N. S. Zhikharev. **Title tr.:** Expedition for scientific and economic investigations on the Murman coast.

Contains narrative by the expedition's director, of the early phases of its extensive and long-term (1898-1908) oceanographic investigations with the *Andrei Pervozvannyi* during 1898-1900 (v. 1), and during 1901 (v. 2, pt. 1). In v. 1, pt. 1 (p. 1-145) organization of the exploratory expedition is described, its work, list of stations, etc. In pt. 2 (p. 147-396) the equipment, boats, instruments and methods of investigation are outlined; the steamer-research vessel *Andrei Pervozvannyi* is described; also the auxiliary and fishing vessels, and their work till the end of 1899; a list of stations is included. Pt. 3 (p. 397-538) chronicles the activities of the *Andrei Pervozvannyi* during 1900, with list of stations, and (p. 539-44) maps.

Vol. 2, pt. 1 contains an account of the research work of the *Andrei Pervozvannyi* in 1901, with list of stations and explanations to the large hydrographic maps appended. The expedition's work and the report cover a wide field, including: climatology, hydrography and oceanography, marine biology and fisheries. The fishing vessels attached to the expedition were to try out new methods and fishing equipment in addition to serving as auxiliaries. The scientific results (publications) of this expedition are surveyed by L. L. Breilfus (*Arctic Bibliography*, No. 2120). Summary in German (for v. 1 only) p. 545-605.

**23327. KNIPOVICH, NIKOLAI MIKHAILOVICH, 1862-1939.** Zur Kenntniss der geologischen Geschichte der Fauna des Weissen und des Murman-Meeres. (Post-pliocene Mollusken und Brachiopoden). (Vserossiiskoe mineralogicheskoe obshchestvo, Leningrad. Zapiski, 1900. seria 2, chast' 38, p. 1-169, fold. map, fold. diagr.) **Title tr.:** On the geologic history of the fauna of White and Murman Seas. (Post-Pliocene molluscs and brachiopods.)

Based on collections of recent material made in 1898-99, by the Expedition for Scientific and Economic Investigation of the Murman Coast, and on post-Pliocene collections in the White Sea region, Novaya Zemlya and the Murman coast. Discussion of the water temperature and recent molluscan and brachiopod faunas of the southern Barents and White Seas (p. 4-30); the localities and post-Pliocene collections of (a) Rybachiy Peninsula, Port Vladimir, Kildin Island, the Kola Bay region, the shores of Notozero (lake), and elsewhere along the north coast of Kola Peninsula (p. 31-48); (b) the White Sea coasts (p. 48-105); (c) the Mezen, Cheshskaya and Pechora Bay regions (p. 105-140); and (d) Novaya Zemlya (p. 141-48). Remarks on the 105 species of post-Pliocene fauna, relating them to interglacial, late glacial, and post-glacial subsidence in northern European Russia, and discussing paleoclimatic changes of the hydrologic régimes of the bordering seas.

For remarks criticizing certain points in this paper, see W. Ramsay's *Ueber die Einwanderung von Yoldia arctica*, 1900.

Contains an account of the geology of the area, the discovery of gold and the rushes; practical suggestions for prospectors on travel, perils, supplies; Dawson and its conditions of living; laws and regulations.

**Copy seen:** DLC.

**23331. KNUTH, EIGIL, Greve, 1903- .** The Danish expedition to Peary Land, 1947-49. (Geographical journal, London,

Mar. 1952. v. 118, no. 1, p. 1-11, map, 7 photos.)

Contains text of a paper read before the Royal Geographical Society, on the expedition to Jørgen Brønlands Fjord (82°10' N., 31°10' W.), carried out and maintained by air. Consecutive sections deal with earlier expeditions to the area; the establishment of a base for the air transport at the head of Young Sound, north of Clavering Ø in lat. 74° N., and reconnaissance flights (summer 1947); establishment of the year-round station, laboratories, quarters, etc., at Jørgen Brønlands Fjord (1948); geology and climate of the area; zoological and botanical observations; early Eskimo settlements in the area, including those of the Dorset and Thule cultures; radio contact with the world; return trips. Discussion of the paper is appended. **Copy seen:** DLC.

**23332. KNUTH, EIGIL, Greve, 1903- .** Dansk Pearyland Expedition; sidste års meteorologi og topografisk overblik. (Geografisk tidsskrift, København, 1950. Bd. 50, p. 2-19, illus., 5 maps (2 fold.)) **Title tr.:** Danish Peary Land Expedition; meteorology of the last year, and topographic survey.

Contains a review (by the leader) of the activities of the expedition during four summers and two winters. The meteorological conditions during the last winter are described, affording a comparison with those of the previous winter, described by B. Frstrup in *Peary Land, en foreløbig redegørelse*, 1950, q. v. A total of 50 flights to Peary Land were carried out, delivering 70 tons of equipment to Jørgen Brønlands Fjord, the expedition's base. The wind conditions were more favorable during the second winter than during the first, but the temperatures were lower. It is uncertain which year came the closer to the normal over longer periods, probably 1948-49. Mean temperatures and extremes are given for each month from Aug. 1948 to July 1950, also some notes on the break-up on Jørgen Brønlands Fjord. Topography of the fiord area, as mapped by the expedition members, indicates that the older maps are inaccurate, e. g. the inland ice does not spread with a broad front over the region south of Independence Fjord, but rather sends a narrow tongue down to the sea. A new lake, over 35 miles long, was discovered. Six photographs and five maps of Peary Land are included.

Account for the general reader, of the Danish Peary Land Expedition of 1947-50, established by airlift; the two-year (1948-50) wintering of an eight-man party under the author and Ebbe Munck in a prefabricated house on Jørgen Brønlands Fjord; the region's physical features, animals and plants, climate, and archeological finds of Cape Dorset and Thule cultures. **Copy seen:** DLC.

**23335. KNUTH, EIGIL, Greve, 1903- .** An outline of the archaeology of Peary Land. (Arctic, Mar. 1952. v. 5, no. 1, p. 17-33, illus., diagrs. maps)

Contains an account of observations and excavations made at Jørgen Brønlands Fjord and other localities during the Danish Peary Land Expedition 1947-50, led by the author. The area is described and characterized as "a transit region for Eskimo migrations from arctic North America to northern East Greenland." Remnants (especially the umiak) of a neo-Eskimo Whale Hunting Culture found at Herlufsholm (ca. 85°35' N., 20°15' W.) are discussed and related to finds in Alaska. Belonging to the Dorset Culture, 31 sites with dwellings, tent rings, fire places, meat caches and fox traps were excavated. Numerous flint and bone artifacts are described, illustrated, and correlated with finds from Norton Sound, and the Brooks Range in Alaska, and from southwestern Labrador. The tent sites (stone rings) are closely analyzed and from them conclusions inferred as to the extent, economy, and life of that culture. The range of Dorset known localities is greatly extended by this expedition. More information "on this strange old Eskimo culture . . . is needed for further investigations on the wide subject of the origin of the whole Eskimo culture." Bibliography (29 items). **Copy seen:** CaMAI; DLC.

**23336. KNUTH, EIGIL, Greve, 1903- .** Sommerrejsen til Pearyland. København, Gyldendalske boghandel, 1948

66 p. **Title tr.:** Summer trip to Peary Land.

Popular account by the leader of the Danish Peary Land Expedition 1947-50: its organization, first summer's reconnaissance trip in 1947, the voyage on the *Godthaab* to Young Sund (74°16' N.) East Greenland, establishment of the southern base there, flight to Jørgen Brønlunds Fjord (82°11' N. off Independence Fjord) site of the expedition's northern base; survey of the adjacent region with a view to planning the research program for the 1948-49 wintering party; return to the southern base. Includes brief comment on activities of members of the party, on the Catalina plane, ice, terrain and weather conditions.

Sixteen species are listed, including sea stars, brittle stars and sea urchins, taken in waters from the mouth of the White Sea to Novaya Zemlya (Barents Sea) waters. *Copy seen:* DLC.

**23342. KOEHLER, RENÉ, 1860-** Échinodermes recueillis par le *Pourquoi-Pas?* dans les mers arctiques, en 1912. (Astéris, Ophiures, Échinides). (Paris. Muséum national d'histoire naturelle. Bulletin, 1913. t. 19, p. 27-31) *Title tr.*: Echinoderms collected by the *Pourquoi-Pas?* in arctic seas, 1912.

Lists for six stations showing location, depth, and type of bottom, including one south of Jan Mayen, one north of Iceland, and one in Denmark Strait; notes on five of the species of special interest, of which three occur in arctic waters. *Copy seen:* DSI-M.

**23343. KÖLZER, JOSEPH.** Der derzeitige Stand der Eiszeitforschung. (Polarforschung, 1951. Bd. 3, Jahrg. 21, p. 44-49) *Title tr.*: Present state of research on the ice age.

Analysis of 20th century (especially its fifth decade) publications on various aspects of the ice age, using Middle Europe as a starting point. Bibliography (30 items). *Copy seen:* DGS.

**23344. KOENIG, ALEXANDER.** Avifauna Spitzbergensis. Forschungsreisen nach der Bären-Insel und dem Spitzbergen-Archipel, mit ihren faunistischen und floristischen Ergebnissen. Bonn, 1911. x p., 1 l., 294 p., illus., 22+33 plates, fold. map (in envelope rear cover) *Title tr.*: Birds of Spitzbergen. Research voyages to Bear Island and the Spitzbergen archipelago, with their faunal and floral results.

Pt. 1, by A. Koenig, is an account of his tourist trip in 1905 to Spitzbergen, and his special research expeditions of 1907 and 1908 on chartered vessels, to Bear Island, in Svalbard waters and along the west and northwest coasts of West Spitzbergen.

Pt. 2, edited by O. Le Roi, contains an ornithologic bibliography (148 items) of the Svalbard region, lists of birds known to Bear Island and West Spitzbergen, full field and biological notes on 58 species of birds collected in 1907-1908; and lists with localities of the land arthropods and flowering plants and ferns collected (identified by several other scientists). Map of Barents Sea, scale 1:2,000,000, shows routes, 1907-1908. *Copy seen:* DLC.

**23345. KÖNIG, F. H.** Bluttemperatur und Wärmeregulation. (Pflügers Archiv für die gesamte Physiologie, 1943. Bd. 246. Heft 5, p. 693-708, 5 fig.) *Title tr.*: Blood temperature and heat regulation.

Contains a study on four healthy male subjects, aged 26-35 years. Cooling the hand in cold water reduced perspiration, including insensible perspiration; cooling the face with ice caused an increase of 20 per cent in metabolism, no area of the body showing such a strong reaction; if medium work preceded, no reaction was elicited by cooling the face, but in cool or warm surroundings the reaction does appear; by drinking cold water, it is possible to reduce the blood temperature, such a reduction causing an increase of metabolism elicited by cold-stimulation of the face. Bibliography (26 items). *Copy seen:* DLC.

**23346. KÖNIG, HERBERT.** Bemerkungen über die japanische Beeinflussungen der Eskimos. (Anthropos, Ephemeris, 1933. Bd. 28, p. 192-93) *Title tr.*: Remarks about Japanese influence on the Eskimos.

Contains discussion of a hypothesis

offered by H. P. Steensby in his *Anthropogeographical study of the origin of the Eskimo culture*, 1916, p. 208 (*Arctic Bibliography*, No. 16732). Steensby's suggestion that Japanese influence on Greenland Eskimo culture in earlier times is a possibility, König concludes to be unconvincing.

**Copy seen:** DLC; InU.

**23347. KÖNIG, HERBERT.** Die Eskimo-Mundarten von Nord- und Nordost-Labrador. (*Anthropos*, Ephemeris, 1937. Bd. 32, p. 595-632) **Title tr.:** Eskimo dialects in northern and northeastern Labrador.

Contains a linguistic description of these dialects, including phonology, morphology, syntax, also writing and pronunciation, quantity and accentuation, changes of vowels and consonants, etc. The author made an expedition to northern Labrador in 1927-28 (no further details); and spent three months among a little-investigated tribe of Eskimos who, living at Wakeham Bay on the southside of the Hudson Strait, call themselves Tarranmiut (*i. e.* inhabitants of the shadow-side). Their culture and language have some similarities with those of eastern Labrador Eskimos, so-called Seqñenmiut (*i. e.* inhabitants of the sun-side), although there are many differences. The author makes frequent comparisons of the northern and eastern dialects in his study.

**23348. KOENIG, LAWRENCE S., and others.** Arctic ice islands. (*Arctic*, July 1952. v. 5, no. 2, p. 67-103, illus., maps) **Other authors:** K. R. Greenaway, Moira Dunbar, and G. F. Hattersley-Smyth.

Contains an account of the discovery of two groups of "ice islands" evidently originating on the north coast of Ellesmere Island. Their size, shape and surface structure, as well as tracking the drift of the large ice islands by planes and radar, are discussed by Major Koenig (from U. S. A. F. "Ptarmigan" and other flights), and by Squadron-Leader Greenaway (from Canadian flights and air photographs). Extensive documentation is presented (by Miss Dunbar) of 19th-20th century explorers' references to, and observations of such "islands". The probability of their origin from shelf ice and the character of the ice shelf of northern Ellesmere is presented (by Mr.

Hattersley-Smith). Special consideration is given to three very large islands (identified as T<sub>1</sub> T<sub>2</sub> T<sub>3</sub>), their discovery, positions and movement, description, seasonal changes, etc.; with additional data on smaller "islands," arranged according to the areas of their presence. From the air the "floating islands" are easily distinguishable from pack ice by their large size, homogenous appearance, very regular, characteristically patterned surface, and a fixed shape suggesting great thickness and hardness. Bibliography (about 40 items).

**23356. KOKKONEN, PEKKA AARON, 1887-** . Beobachtungen über den Bodenfrost des Winters 1941-42. Helsinki, 1942. 11 p., illus., tables. (Acta forestalia fennica, 50:22) **Title tr.:** Observations on frozen ground during the winter of 1941-42.

**The author** observed in Apr.-May, that the bottom of drainage ditches in fields near his home appeared almost as if they had been lowered 22-25 cm. Excavation in the soil near the side of the drainage ditch showed the freezing of the soil in cross section (the size variations of the soil particles from surface down to the clay underlying the frozen ground are described in relation to their depth). An almost pure (same volume weight) ice layer 22-25 cm. thick was encountered 43 cm. from the soil surface. The capillarity, weather, effect on plants, damage, and thawing of the soil are briefly described. Summary in Finnish.

**23357. KOKKONEN, PEKKA AARON, 1887-** . Havaintoja roudan aiheuttaman maanpinnan ja routakerroksessa olevien esineiden kohoamisesta. (Teknillinen aikakauslehti, 1930. v. 20, p. 731-39, illus., diagr.) **Title tr.:** Observations on freezing causing the ground surface and frost layers to expand.

**Observations** were made in Finland during the winters of 1928-1929 and 1929-1930 to determine how much the soil rose due to frost action. There were 80 observation points the first

winter and 60 observation points the second winter. One hundred and eight stakes, driven from 5-60 cm. into the soil, were used in a test on one plot near Helsinki. The amount of rise of the stakes was recorded by a Zeiss instrument. Snow cover, frost depth, temperature, and the variation in the amounts of rise of the stakes are discussed briefly. Test results indicated that: (1) the surface rise was 10-16 per cent of the depth of the frost in grassy ground and 12-20 per cent of the frost depth in bare ground; (2) the deeper stakes rose from 2-5 times higher than the ground surface unless the stake had been driven beneath the ice layer; (3) the expansion of the earth caused the roots of plants to stretch 10-20 per cent; and (4) the frost was capable of lifting an entire plant out of the soil."—SIPRE.

**23358. KOKKONEN, PEKKA AARON, 1887- .** Havaintoja viime talven roudata ja sen sulamisesta sekä sen vaikutuksesta viljelykseen. (Suomen maataloustieteellinen seura. Aikakauskirja, 1942. v. 14, no. 3-4, p. 80-110, illus., tables, diags.) **Title tr.:** Observations on last winter's ground frost and on its melting and effect on cultivation.

"Ground frost ranging in thickness from 1 m. to 2.2 m. was observed in grain fields in northern Finland during the spring of 1941. Dense, striped layers of ice were found in fine or medium grained sandy soils. Heterogeneous, scattered ground ice occurred in silt and clay soils. Ground water was located at 0.7 m. to 3 m. from the soil surface. The fields were free from ground frost to the depth of 40 cm. and ready for plowing at the end of April. Ground frost had thawed completely by the end of June in sandy soils. Thick ground frost in clay soils at the depth of 1.25 m. in the beginning of August indicated that thawing is slower in clay soils and may persist throughout the summer. The soil surface was raised 33-36 percent of the thickness of the ground frost during the thawing process. Excessive ground frost crumbled and softened the sides of the drainage canals reducing the width of the drainage canals by 6-16 cm. Temperature measurements of the soil indicated that the soil temperatures in tilled soils were 3-4° C. lower than normal during summers due to the thick ground frost. Cold soils and excess moisture in the fields from slowly melting

ground frost resulted in inferior crops of grain and potatoes."—SIPRE. Summary in German. **Copy seen:** DLC.

**23359. KOKKONEN, PEKKA AARON, 1887- .** Roudan rakenteesta ja siihen vaikuttavista seikoista. (Teknillinen aikakauslehti, 1929. v. 19, no. 3, p. 199-206, illus., diag.) **Title tr.:** The structure of ground frost and factors affecting it.

"Ice crystal formations in frozen ground are classed as surface ice attributable to poor drainage conditions in the soil (ylännejäätiköt), vertical ice wedges ranging in thickness from 2 to 15 mm. and covered with 1 or 2 mm. of soil (rouste), and ground ice (maarouta), thin or heavy deposits of ice occurring underneath ice wedges. Ground ice is divided structurally into crevice ice, massive ice, and stratified ice. Crevice ice is found in soft soils where water has frozen in the crevices, holes and pits forming fragile ice. Massive ice occurring in the clay and sandy soils is formed by water freezing around soil grains. Stratified ice forms horizontal layers ranging in thickness up to 30 mm. which have vertical, needle-like structure, and occurs in all soils. The structure of ground frost is affected by moisture content, soil structure, and the rate of decrease in temperature. Laboratory tests to determine the moisture content of various soils show that every soil type has its own moisture equivalent. Clear ground ice forms when the moisture content of the soil is greater than the moisture equivalent. Thick ground ice formations are attributed to slow decreases in air temperature, and thin layers to a rapid drop in temperature. Ground ice may be decreased or prevented by covering the soil or providing adequate drainage."—SIPRE. **Copy seen:** DLC.

t. 9, no. 5-6, p. 503-506) **Title tr.:** Factors and processes of snow firnization.

"The works of Flaig, Koch, and [Alfred] Wegener on firn formation are reviewed. The following aspects of snow firnization are explained. (1) In a snow mass, large crystals develop at the expense of small evaporating crystals even when the temperature is constant. (2) When a vertical temperature gradient exists, the moisture passes from the warmer to the colder layers of snow, thus accelerating the firnization of the colder snow. (3) Firnization is accelerated by temperature variations. (4) Firnization is increased when a fresh snowfall with free and bound water is deposited on the firn's surface. (5) Snow saturated with water is unlikely to produce firn. (6) Repeated freezing and thawing of snow produces various forms of firn-like ice."—SIPRE. Bibliography (10 items). Summary in English.

**22384. KOPPES, WAYNE F.** A report on characteristics of snow houses and their practicability as a form of temporary shelter. [Washington] National Research Council, 1948. 18 p., diagrs. Mimeographed.

"A report to the Subcommittee on Shelter and Clothing, Committee on Sanitary Engineering and Environment, National Research Council."

Review and correlation of the published literature, also some new material, on "air temperature, humidity, air change, wall and floor temperatures and CO concentrations existing in the interior" of snow houses under arctic conditions. Includes construction methods, both typical and use of inflated forms, floor linings, glazing, characteristics of ventilation, sound insulation, interior illumination; also computations of heat loss, rate of air change and heat load under ventilated conditions.

"Snow houses are built from domino-shaped blocks of wind-pressed snow, 4-5 in. thick, 20-40 in. long and 12-20 in. wide, on level drifts, 3 ft. deep. Snow houses adequate for 4-5 people are 10-12 ft. in diameter and 7 ft. in height. The blocks are laid in a continuous spiral, each layer tilting slightly inward. The door is provided by tunnelling under the wall to a pit inside the house. The snow house is glazed on the inside by raising the temperature to induce thawing and lowering the temperature to refreeze the melt-water. The dome vent and sub-floor entrance trench simplify heating and ventilating problems. The construction and use of snow houses are restricted to low temperature areas, the proper snow consistency, and 10 days to 2 weeks duration. The military advantages include the elimination of transporting shelter units, low cost and speed of construction and heating, camouflage values, and superior comfort afforded. It is recommended that military personnel in the Arctic be trained in the construction of snow houses. Research concerning temperature and ventilation under various weather conditions and experimentation with pneumatic forms for rapid snow

block manufacture are suggested."—

**23406. KOSTIN, S. I.** Promerzanie pochy; znachenie promerzaniâ pochy; vechnaiâ merzlota; nagrevanie i okhlazhdenie vodnykh poverkhnostei. (In his: Osnovy meteorologii i klimatologii, 1951, p. 86-90, 93-95, incl. tables, map) *Title tr.*: Freezing of ground and its significance; permafrost; heating and cooling of water surfaces.

"Frost penetration of soils is controlled by climate, snow cover, relief, soil structure, moisture content, type of soil, vegetative ground cover, and groundwater level. Repeated freezing-and-thawing changes the physical properties of the soil mainly by increasing porosity and permeability. The moisture content of the soil under the frozen layer increases through condensation of vapor from deeper, warmer soil. The southern boundary of permafrost coincides with the mean annual isotherm of  $-2^{\circ}\text{C}$ . The addition of NaCl (0-3.5 percent) to water decreases the temperature at maximum density from  $+4^{\circ}\text{C}$ . to  $-3.5^{\circ}\text{C}$ . The temperature of maximum density and the freezing point are identical ( $-1.3^{\circ}\text{C}$ .) at a salt content of 2.4 percent."—SIPRE. *Copy seen:* DLC.

General characteristics; physical and chemical properties; topography and occurrence of other minerals in the same area, and a comparison with other minerals are outlined.

**Copy seen:** DLC.

**23411. KOSTYLEVA, E. E.** Katapleit Khibinskikh tundr. (Akademii nauk SSSR. Izvestiia. Seriia 7. Otdelenie matematicheskikh i estestvennykh nauk,

1932. no. 8, p. 1109-25, text map) **Title tr.:** Catapleite of Khibiny Tundra.

Contains a general description of this mineral found in central Khibiny by members of the Kola expedition, with data on its chemical composition, crystallographic and optical properties, and mineralogical description of the pegmatite rocks where catapleite was found.

**Copy seen:** DLC; MH.

**23412. KOSTYLEVA, E. E.** O novom mineral, ramzaite iz Khibinskikh i Lovozerskikh tundr. (Akademii nauk SSSR. Doklady, seriia A, July-Dec. 1923. p. 55-58, tables) **Title tr.:** On a new mineral, ramsayite from the Khibiny and Lovozero Tundras.

Distribution, crystallography and chemistry of this mineral, named in honor of the first student of the Lovozero Tundra, Wilhelm Ramsay.

**Copy seen:** DLC.

**23413. KOTILAINEN, MAUNO J.** *Salix pyrolifolia* Led. Tervolassa. (Societas pro fauna et flora fennica. Memoranda, 1948-49, pub. 1950. no. 25, p. 18-22, text map) **Title tr.:** *Salix pyrolifolia* Led. in Tervola.

Contains floristic notes and data on the distribution of a northern species of willow, *Salix pyrolifolia*, found in Tervola, northern Ostrobothnia and the Kuusamo region, Finland.

**Copy seen:** DLC; MH-A.

**23414. KOTILAINEN, MAUNO J.** Über die Frostschäden an wilden Pflanzen. (Suomalainen tiedeakatemia, Helsingfors. Sitzungsberichte, 1948, p. 135-57, tables) **Title tr.:** Frost damage to wild plants.

Contains a study made during the summer of 1948 on frost damage (spring and summer frost) to wild plants in Finland including those of arctic regions. Author stresses the paucity of references to, and studies of, the problem and touches also the question of the physiology of freezing of plants. He subsequently gives a detailed account of frost damage observed during his travels, to: ferns, herbaceous plants, bushes and trees (including economically important forest species). The parts and kinds of plants mostly damaged, the possible effects of frost damage on the ecology and geographic distribution of the plants, as well as on their growth are discussed, and factors aiding frost injury are analyzed.

**Copy seen:** DLC.

**23415. KOTILAINEN, MAUNO J.** Über die Verbreitung der meso-eutrophen Moorpflanzen in Nordfinland. Helsinki, 1951. 162 p. incl. district maps, fold. map. (Suomalainen tideakatemia. Toimituksia. ser. A, IV, Biologia, 17) **Title tr.:** On the distribution of meso-eutrophic moorland plants in North Finland.

Contains a regional inventory of fen- or moor-land plants in the Finnish parishes between 65°30'–68° N., defined with regard to area, cultivability and soil quality. Distribution of 139 vascular plants and the floral provinces of the region are discussed; frequency distribution maps for selected species are presented. Bibliography (97 items).

**KOTOVICH, V. A.,** see Al'bov, N. V., & V. A. Kotovich. K voprosu struktury Onego-Dvinskogo mezhdurech'ia. 1939. No. 20124.

**23416. KOTSEBU, OTTO EVSTAF'EVICH, 1787–1846.** Voyage of discovery in the South Sea, and to Behring's Straits, in search of a North-East Passage, undertaken in the years 1815, 16, 17, and 18 in the ship Rurick. London, R. Phillips, 1821. 2 pts. in 1 v. (220 p.) Caption and running titles: Voyage round the world. Published in *New voyages and travels*, edited by Sir Richard Phillips, v. 6.

According to the verso of the t.-p. of pt. 1, pt. 2 "will contain the conclusion of Capt. Kotzebue's voyage, together with the . . . narrative of M. Chamisso, the naturalist, and a translation of some of the valuable memoirs with which the German original is terminated." But this plan was not carried out apparently.

This is a much abridged version of the author's narrative (see *Arctic Bibliography*, No. 9192, 9195), containing a brief section (p. 173–83) on the visit to the Aleutian Islands (Unalaska, Unimak).

**Copy seen:** DLC.

**23417. KOTTKE, F. J., and others.** Effect of hypoxia upon temperature regulation of mice, dogs and man. (American journal of physiology, Apr. 1948, v. 153, p. 10–15, 4 fig.) **Other authors:** J. S. Phalen, C. B. Taylor, M. B. Visscher, and G. T. Evans.

Contains a report on experiments which demonstrated that hypoxia decreases the ability of the species tested to control body temperature in a cold environment.

This was most pronounced in the mouse, least in man. Shivering was inhibited in all species studied. In man exposed to cold, suppression of an increased oxygen consumption by hypoxia and a greater dissipation of heat from the skin, were demonstrated. Decreased environmental and body temperature favored survival of mice exposed to progressive hypoxia. Bibliography (16 items).

"Results of 370 spectrophotometric measurements of albedo of all possible types of natural surfaces are analyzed with basic data listed and curves of intensity in wave lengths from .4-.9 $\mu$  for each observation systematically presented. Among the types of surface covered are forest (birch, oak, fir, willow, linden, pine, elm, larch), grasses, tundra, orchards, gardens, snow cover, buildings, etc. Not only are various types of each of the above surfaces analyzed, but variation in each type, according to season, homogeneity, stage development, etc. are treated separately. The textual section treats of the theory of spectro-

photometry, methods of observation, details of instrumentation for use in aerial photography of albedo and methods of compiling data. Spectrophotometric observations were made in nine regions of the European U.S.S.R. from Arctic to subtropics (including tundra, taiga, chernozem, forested steppe, steppe, desert and mountain areas) between 1932 and 1942. . . . Not only does it enable the calculation of the albedo of the earth from a knowledge of astronomical and vegetative factors, but would facilitate the selection of proper filters for aerial photography. Cloud albedo is not, however, considered."—*Meteorological abstracts and bibliography*, Mar. 1952. v. 3, p. 217. Bibliography (45 items).

According to the author, dogs in northern Greenland devour human feces. As one often finds healthy carriers of typhoid bacilli among the population, the question arose whether this habit of the dogs may not make them spread the germs. Feeding experiments on 12 Greenland dogs, showed that the germs taken up with human feces multiply or survive in the dogs' organism and are voided. This demonstrates that the disease may be spread by the dogs even over large areas.

Review of 17th and 18th century ex-  
ploration along the Siberian arctic coast,  
and the early 19th century discovery of  
islands in the New Siberian group; with  
discussion of the need for more accurate  
mapping of the Siberian coast. Issued  
also in French with title: *Sur les îles*  
*récemment découvertes dans l'Océan Glacial*  
*Arctique*, 1819, q. v. **Copy seen:** DLC.

geologicheskaiā 1941, no. 6, p. 3-8)  
**Title tr.:** Ores and the country's  
defense.

**Contains** a survey of the metal and  
mineral ore resources of the U.S.S.R.  
important to the defense industry, with  
data on nickel deposits on Kola Penin-  
sula (Moncha Tundra) and in the Yenisey  
River region (Noril'sk); tin ores are also  
found in Kazakhstan, Indigirka and  
Kolyma River regions and on Chukotsk  
Peninsula; apatite, nepheline and cyanite  
on Kola Peninsula; vanadium in North-  
ern Urals and Kola; many other less  
important deposits of metals and minerals  
are recorded. **Copy seen:** MH.

diags. **Title tr.:** Essays on the  
history of road construction in the  
U.S.S.R.; pre-Revolutionary period.

**Contains** a study on roads, road  
construction and means of transporta-  
tion, in three parts; (1) from earliest  
times till the period of feudalism (p.

11-54); (2) the period of feudalism (p. 57-132); (3) the period of capitalism (p. 135-286). Part 1 includes occasional references to winter transportation; pt. 2, information, plans, etc., regarding conditions in northern European Russia during the 16th and 17th century (p. 78-105) with Moscow as center of transportation, and road-building in the 18th century (p. 105-132) including arctic Siberia. The third part, covering the period 1801-1917, has numerous references to arctic areas and conditions, including mechanical road maintenance and construction. This volume contains also information on subjects connected with roads, as: road signs, railway stations, toll houses, etc. Bibliographical and other notes (p. 290-331). A second volume is noted (p. 4) to be in preparation.

**23526. KUMAI, MOTOI.** Electron-microscope study of snow-crystal nuclei. (Journal of meteorology, June 1951. v. 8, p. 151-56, illus.)

"The mechanism of snow-crystal growth is discussed on the basis of [data obtained from experimental work at an altitude of 1050 meters] . . . Snow crystals were received on the colloidal film of the holder of an electron microscope, and left in a desiccator kept between -4 and -8 C. The crystals sublimed and the supposed nuclei remained on the colloidal film. . . . Condensation nuclei are found to be of two kinds, the larger ones most frequently having a diameter of about 0.15 $\mu$ , the smaller ones about 0.05 $\mu$ ."—From author's abstract.

Contains description of cyanite schists of the central watershed of the peninsula, known as Keiv cyanite; with detailed microscopic analysis leading to the author's conclusion that this mineral is a pseudomorph of andalusite of a peculiar polymetamorphic type. Summary in English. **Copy seen:** DLC; MH.

**23528. KUNHENN, PAUL.** Grönländische Erinnerungen an Erich v. Drygalski. (Kosmos, Apr. 1949. Jahrg. 45, p. 161-63, illus.) **Title tr.:** Greenland recollections of Erich von Drygalski.

Notes on the late 19th century glacier research done by Drygalski and the subsequent investigations of Karajak Glacier in West Greenland, carried out by other scientists. **Copy seen:** DLC.

**23529. KUNHENN, PAUL.** Weihachten im ewigen Eis. (Kosmos, Dez. 1949. Jahrg. 45, p. 447-50, illus.) **Title tr.:** Christmas on the everlasting ice.

Tribute to the three men, Georgi, Sorge and Loewe, who occupied the mid-ice station of the Alfred Wegener Greenland Expedition during the winter 1930-31, describing their hardships, program and pioneering spirit. **Copy seen:** DLC.

**23530. KUNIKE, HUGO.** Die Sagen-gestalten der Koryaken. (Internationales Archiv für Ethnographie, 1927. Bd. 28, p. 105-136) **Title tr.:** The features of the Koryak legends.

Contains mythological classification and investigation of Koryak legends, chiefly based on the material published by V. I. Jochelson. The author divides the legends into several cycles ("the great raven," "the great light," etc.), tries to explain their origin and connection with phenomena in nature, e. g. influence of the moon on the formation of myths, etc. **Copy seen:** DLC.

**23531. KUNKLE, EDWARD CHARLES.** 1915-. Phasic pains induced by cold. (Journal of applied physiology, June 1949. v. 1, p. 811-24, diagrs.)

"From analyses of local vascular and sensory changes", two kinds of pain were identified: (1) cold pain "attributed to direct injury to the chilled tissues or nerves", and (2) second pain, which "occurs only during the phase of recovery" and "is associated with reactive vasodilatation and a consequent warming of the finger."—Author's summary. Bibliography (23 items). **Copy seen:** DLC.

**23532. KUNTZEMÜLLER, A.** Ergänzungsbauten an der Murmanbahn. (Zeitschrift für Erdkunde, März-Apr. 1943. Jahrg. 11, p. 195-96, map) **Title tr.:** Additional construction on the Murman railroad.

News item sketching the earlier development of the 1451 km. railroad from Leningrad to Murmansk and the need which arose later, during World War II, for building a 500 km. branch line from Byelomorsk to Obozerskaya (on the Moskva-Arkhangelsk line), to maintain transportation to Murmansk in the event that the Leningrad end of railroad fell into enemy hands.

**23533. KUPFFER, KARL REINHOLD.** 1877-1935. Nashi Alopecurus'y i ikh gibridy. (Tartu (Ür'ev or Dorpat) Estonia. Universitas. Hortus botanicus. Acta, 1905, pub. 1906. t. 6, vyp. 4, p. 237-45) **Title tr.:** Our species of Alopecurus and their hybrids.

Contains critical notes on four species of this genus of grasses and their hybrids; includes *A. ventricosus*, native to Swedish Lapland and White Sea region.

**Copy seen:** DA; MH-A.

**23534. KUPLETSKIĬ, BORIS MIKHAILOVICH.** K mineralogii Khibinskikh tundr. (Akademiia nauk SSSR. Doklady, seria A, 1930. no. 13, p. 331-36, illus.) **Title tr.:** On the mineralogy of the Khibiny tundras.

Veins and scatterings of the eudialyte and zircon ores are described.

**Copy seen:** DLC.

**23535. KUPLETSKIĬ, BORIS MIKHAILOVICH.** K petrografii Khibinskikh tundr. 4. Porody vostochnogo Umpteka. (Akademiia nauk SSSR. Mineralogicheskii muzei. Trudy, 1926. t. 1, p. 83-166, fold. map) **Title tr.:** On the petrography of the Khibiny tundras, 4. The rocks of eastern Umptek.

Description of minerals found in eastern Umptek (area between Lakes Imandra and Ump'yavr), with brief geological characterization of the sites of their occurrence, and a petrographic map (fold.) scale about 1:300,000. Summary in German. **Copy seen:** DSI-M.

**23536. KUPLETSKIĬ, BORIS MIKHAILOVICH.** Knopit v porodakh osnovnoi magmy. (Akademiia nauk SSSR. Izvestiia. Seria geologicheskai, 1936,

no. 1, p. 105-111) *Title tr.*: Knopite in basic magma rock.

*Contains* a description of an intrusion of pyroxenite near Afrikanda station on the Murman Railway in Kola Peninsula; including knopite, a mineral of the perovskite group, rich in titanium and comparable to the Canadian knopite. Its chemical analysis and optical characteristics are offered. It is associated with ijolite and may possibly be residual exudation of ultra-basic magma. Summary in English.

*Copy seen:* DLC; MH.

**23537. KUPLETSKIĬ, BORIS MI-KHAĬLOVICH.** Materialy k izucheniiu Khibinskikh polevykh shpatov. (Vserossiiskoe mineralogicheskoe obshchestvo, Leningrad. Zapiski, 1931. Seriya 2, chast' 60, p. 51-64, plate, tables, diagrs.) *Title tr.*: Material on the feldspars of Khibiny.

Results of optical and chemical analyses of potash-soda feldspars from pegmatites of the Khibina Tundra alkaline massifs, Kola Peninsula; bibliography (7 items). Summary in English.

*Copy seen:* DGS.

**23538. KUPLETSKIĬ, BORIS MI-KHAĬLOVICH.** Materialy k petrografii pripolarnoi Sibiri mezhdur. Īanoi i Alazeel. (Akademiia nauk SSSR. Izvestiia, seriya 7, Otdelenie fiziko-matematicheskikh nauk, 1930, no. 10, p. 1029-51, illus.) *Title tr.*: Materials on petrography of polar region between the Yana and Alazeya Rivers.

*Contains* the results of microscopic study of mineralogical materials from the rock formations in the vicinity of Svyatoy Nos, western section of the region between the Yana and Indigirka Rivers, and from the banks of the Alazeya (right tributary of the Indigirka about 70°50' N., 153°48' E.). The materials were brought home by the expeditions of A. Bunge (1885), E. v. Toll (1893), and K. Vollosovich (1908-1909). The analysis shows a great difference between the granite formations of the two regions. Summary in German.

*Copy seen:* DLC; MH.

**23539. KUPLETSKIĬ, BORIS MI-KHAĬLOVICH.** Ein Mineral der Astrophyllitgruppe vom Berge Urma-Waraka im zentralen Gebiet der Halbinsel Kola. (Akademiia nauk SSSR. Doklady, seriya A, 1929, no. 14, p. 343-47, tables) *Title tr.*: A mineral of the astrophyllite

group from the Urma-Varaka Mountain in central Kola Peninsula.

Mineralogical and chemical analysis of samples taken in this area about 150 km. east of Imandra station. Comparison with similar minerals.

*Copy seen:* DLC.

**23534. KUPLETSKIĬ, BORIS MI-KHAĬLOVICH.** O kolichestvenno-mineralogicheskome sostave apatito-nefelinovykh porod Khibinskikh tundr. (Akademiia nauk SSSR. Doklady, seriya A, 1928, no. 5, p. 69-72, tables) *Title tr.*: On the quantitative mineralogical composition of the nepheline-apatite rocks from the Khibiny tundra.

*Copy seen:* DLC.

**23531. KUPLETSKIĬ, BORIS MI-KHAĬLOVICH.** Zhizn' i nauchnaia deiatel'nost' akademika A. E. Fersmana k 60-letnemy ūbileuiu. (Akademiia nauk SSSR. Izvestiia. Seriya geologicheskai, 1944, no. 1, p. 35-41, port.) *Title tr.*: The life and scientific activity of A. E. Fersman, member of the Academy of Sciences, tribute to his 60th anniversary.

*Contains* a biographical sketch of the geologist Aleksandr Evgen'evich Fersman, 1883-1945, noting his explorations of arctic regions, including Ural Mts. (1912-14), and the Khibiny (1920-23), Imandra and Monche tundras (1931) in Kola Peninsula. His achievements in the study of geology, petrology, geochemistry and mineralogy of various regions of the U.S.S.R., especially Kola Peninsula are signalized.

**23570. KYTMANOV, D. A.** Tuzemtsy Turukhanskogo kraia. (Sovetskaiā Aziā, 1927, god 3, no. 2, p. 37-51; no. 3, p. 51-67, tables) **Title tr.:** Natives of the Turukhansk district.

Contains a physician's account of the work of a three-man party, sent in 1926 to the Podkamennaya Tunguska and Sym River region to give medical care to Russians and natives: Yenisey-Ostyaks, Tungus, and Yeniseians. Altogether 455 natives were treated; the more common diseases were scurvy, syphilis, small-pox, trachoma, etc. Author remarks on the difficulty of persuading the Ostyaks to take the medicine in the prescribed way, the impossibility of treating women's diseases, native childbirth care among the Ostyaks and Tungus; statistics are given on smoking and drinking, skin parasites, the high child mortality (about 50 percent), etc.

**23571. KYZLOSOV, L. P.** Drevneiše svidetel'stvo ob olenevodstve. (Sovetskaiā étnografiā, 1952, no. 2, p. 39-49, illus.) **Title tr.:** The oldest evidence of reindeer husbandry.

Contains evaluation of excavations made by the Khakass archeological expedition, organized by the University of Moscow in 1950. Khakass Autonomous Province lies on the left bank of the Malyy Syr River, on the border between the steppe and taiga regions.

The burial mounds (*chaa-lasa*) date from the first to fourth century A. D. Among other things, they disclosed wooden statuettes of domestic animals: leg of a horse, and a complete reindeer artistically carved from cedar wood. Conclusion is drawn that reindeer husbandry was known to the Sayan-Altai peoples as far back as the bronze age.

**23578. LABZOVSKIĬ, N. A.** K voprosu ob opredelenii ugla otkloneniia vetra v prizemnom sloe vozdukh a ot napravleniia gradianta. (Problemy arktiki, 1944, pub. 1945, no. 2, p. 108-114, tables, diagrs.) *Title tr.*: Determination of the angle of deviation of the wind from the direction of the gradient in the atmospheric layer near the ground.

"A study of data pertaining to the deviation of the wind from the direction of the baric gradient in the Kara Sea shows that the angle of deviation does not depend on the velocity of the wind, but rather on the density of the air; the value of the coefficient of friction between the air and the underlying surface of the Kara Sea does not vary from winter to summer. The author limits his findings to the investigated area. An application of the established relations to other regions requires additional survey."—*Meteorological abstracts and bibliography*, Feb. 1952. v. 3, no. 2, p. 112. *Copy seen:* DGS.

In connection with the investigations of V. Cornish, Wey, and C. Börgen, the author studies the influence of the fetch (stretch of water over which the wind blows) on the height of the wave produced and tabulates the relation of three factors influencing the height of wave, viz. geographical latitude, velocity of wind, and extent of the fetch (in km.). He illustrates this theory with observational data on the waves of Kara Sea. *Bibliography* (8 items). *Copy seen:* DGS.

**23580. LACH, ROBERT, 1874-** . Gesänge russischer Kriegsgefangener. 1. Bd. Finnisch-ugrische Völker, 1. Abt. Wotjakische, Syrjänische und Permia-

kische Gesänge. Transkription und Übersetzung der . . . syrjänischen und permjakischen von Dr. Raphael Fuchs. 54. Mitteilung der Phonogramm-Archiv-Kommission. Wien und Leipzig, Holder-Pichler-Tempsky A. G., 1926. 135 p., musical notes. (Akademie der Wissenschaft in Wien. Philosophisch-historische Klasse. Sitzungsberichte, Bd. 203, Abt. 5) *Title tr.*: Songs of the Russian prisoners of war: Votyak, Zyryan and Permian songs. Transcription and translation from the Zyryan and Permian by Raphael Fuchs. Phonograph-Archives Commission report no. 54.

*Contains* (among others) Zyryan words and melodies (also German translations) of 65 songs, recorded with a phonograph in 1916-17 by the Academy of Science in Vienna from the native Zyryans, former soldiers of the Russian army, taken prisoners-of-war by Austrians. The Zyryans (total about 90,000) live on the Rivers Pechora, Mezen' and the eastern tributaries of the Severnaya Dvina. The singers of this recorded material were native to the districts of Voronzovskoye, Votchinskoye, Kokvit-skoye Vychera, and Soshka, all in the government of Vologda. In the introduction Lach gives a musical characterization of these songs, remarks on the singers and their inclination to improvise, the influence of the Russian songs, etc. The material should be used with a certain caution, as the singers were inclined evidently to extend their rather limited native repertory by adapting Russian melodies and translating Russian texts. *Copy seen:* DLC.

**23581. LACH, ROBERT, 1874-** . Vorläufiger Bericht über die im Auftrage der kais. Akademie der Wissenschaften erfolgte Aufnahme der Gesänge russischer Kriegsgefangener im August bis Oktober 1917. 47. Mitteilung der Phonogramm - Archivs - Kommission. Wien, 1918. 63 p. musical notes. (Akademie der Wissenschaften in Wien. Philosophisch-historische Klasse. Sitzungsberichte, Bd. 189, Abt. 3) *Title tr.*: Preliminary report on the recording of songs of the Russian prisoners-of-war made by the Academy of Sciences from August to October, 1917. Phonograph-Archives Commission report no. 47.

*Contains* account of organization of the work, and its results, musical characterization of the melodies, their various types and historical evolution, specimens

of Estonian, Zyrian (8), Mordvinian, Votyak, Cheremiss and Chuvash melodies are given. It was quite difficult to get genuine Zyryan-Permian, Mordvinian and Votyakian songs, because the process of Russification of those natives had made such progress that the younger generation had already adopted the Russian songs and only the old people at home knew the native songs well. On the other hand, the author thinks that the representatives of the Cheremiss and Chuvash people had preserved their native songs much better because they were more nimble-witted and at a higher intellectual level than Zyryans, Votyaks or Mordvins. In all, 837 songs were recorded, among them 69 Zyryan and Permian. **Copy seen:** DLC.

Contains a critical note on five species of crane flies (Tipulidae) of the group *Tipula lateralis*, including *T. coerulescens* native to Enontekiä, Finnish Lapland.

**Copy seen:** DLC; MH-Z.

**23583. LACKSCHEWITZ, PAUL, 1865-1936.** Das Genus *Tipula* (Diptera, Nematocera) in der Arktis und dem borealen Waldgebiet Eurasiens. (Akademiä nauk SSSR. Zoologicheskii institut. Trudy, 1936. t. 4, vyp. 2, p. 245-312, illus.) **Title tr.:** The genus *Tipula* (Diptera, Nematocera) in the arctic and the boreal forest zone of Eurasia.

Contains a critical revision of 62 species of crane-flies, genus *Tipula*, with synonymy, descriptive notes and data on distribution. Many of the species are native to northern Scandinavia and the arctic regions of European and Asiatic Russia; bibliography (18 items).

**Copy seen:** DLC; MH-Z.

**23584. LACKSCHEWITZ, PAUL, 1865-1936.** Tipuliden-Studien II-III. (Dip., Nematoc. polyn.). (Konowia, 1933, Bd. 12, heft 1-2, p. 129-42, plate 1; (II) 1934, Bd. 13, heft 2, p. 125-44, illus.)

Contains (in pt. II) a study of palaearctic species of the crane-flies of the genus *Prinocera*, with a table for the

determination of the species and descriptions of six species, including *P. prozima*, *P. abscondita*, *P. anceps* n. spp. and three other species distributed in northern Finland, European Russia and Siberia (from the Polar Urals to Kamchatka). In pt. III are the keys for the determination of five species of the group *Stigmatella* and 11 species of *Trifurcata* group, descriptions, localities, lists of specimens and data on distribution. Includes *T. crassicornis* native to Lapland, the Polar Urals and northern Siberia and *T. hirsutipes* and *T. tristriata* from northern Siberia. Pt. 1 of this paper does not include arctic material.

**23589. LAGERCRANTZ, ELIEL, 1894-** . Entwicklungspsychologische Analyse lappischer Folklore. Helsinki, Suomalainen Tiedekatemia, 1950. 155 p. (Folklore Fellows. Communications no. 138) **Title tr.:** Analysis of Lapp folklore based on comparative psychology.

Contains in the theoretical part (p. 1-53), explanation of the principles according to the author's viewpoint of how folklore should be investigated. The second part (p. 54-152) consists of interpretations according to these principles of tales, beliefs, and songs taken from the author's collection of Lapp poetry (*Lappische Volksdichtung*). He attempts to determine the rules of pure evolutionary psychology in folklore and believes that an explanation of dreams with aid of analogies can give a key for interpretation of folklore. As his teacher and forerunner he mentions Heinz Werner and the latter's *Einführung in die Entwicklungspsychologie* (translated as: *Comparative psychology of mental development*, Chicago, 1948. xii, 564 p.) Lagercrantz presents here in effect, a somewhat modified application to folklore of Freud's theory of psychoanalysis. The demons of folk tales, according to the author, were caused by neurotic fears and various erotic disturbances: fear of death, fear of coitus, castration and impotence, etc. "Most of the primitive tales, which deal with social and erotic conflicts, have a murder at the end, or some other sadistic or masochistic excesses" (p. 47). The cycle of tales about Stallo and his wife, for instance, gives a demonic representation

of social and erotic fears and effects of guilt between parents and their children, an Oedipus complex, etc. (p. 60). The work abounds in psycho-analytic terminology, with eroticism, fear and murder shown as main forces in development of Lapp folklore. **Copy seen:** DLC; InU.

**23590. LAGERCRANTZ, ELIEL, 1894-** . Die Geheimsprache der Lappen. Helsinki, 1928. 13 p. (Suomalais-ugrilainen seura. Aikakauskirja, v. 42, no. 2) **Title tr.:** The secret language of the Lapps.

Contains information on two kinds of secret language: the southern Lapps use picturesque description for objects, saying e. g. "horns" for "money", "bitter" for "coffee", "scissors" for "weapons", etc.; the northern Lapps of Varanger interchange syllables in a word, transposing the second and first, the third and fourth syllable, etc., e. g. the word "tolin" is spoken: "linto"; the quantity of sounds is also changed. Some Lapps can speak and understand this "reversed" language very fluently. These secret languages are used in private conversation when it is desired to keep somebody else knowing ordinary Lappish, from understanding e. g., when dealing with a merchant.

**23611. LAKÓ, GYÖRGY.** Zur Frage des permischen Prosektivus und Tran-

sitiv. (Suomalais-ugrilainen seura. Toimituksia, 1950. v. 98, p. 219-43) **Title tr.:** On the question of the Permian prosecutive and transitive.

Linguistic study based on Permiak dialects of which Zyryan is a salient component. The prosecutive and the translative serve to express various aspects of the verbal predicate. The prosecutive expresses a cursive activity, and has the meaning of a prolative. The transitive usually expresses the terminative aspect of activity, and is originally a locative, though it often appears in the meaning of a prolative. **Copy seen:** DLC; InU.

**23612. LAKOZA, IŮ. I.** Lechebnoe primenie reventā tangutskogo, vyroshchennogo na Pechore. (Aptechnoe delo, May-June 1952. no. 3, p. 63-64) **Title tr.:** Therapeutic use of Tangut rhubarb, grown on the Pechora.

Contains note of the local climatic conditions and the way rhubarb is grown (in an experimental way). The success of the Tangut variety, yields, preparation of a powder from the root, and its characteristics, etc., are described. This local arctic product is claimed to be equal in value to others, in alleviating gastric, liver and bile disorders. Bibliography (4 items).

**23615. LAKTIONOV, A. F.** Severnyy polfus. Arkhangel'sk, Arkhangel'skoe oblastnoe Izd-vo, 1939. 236 p. illus., maps. **Title tr.:** The North Pole.

"Voyages to the Arctic between 1527 and 1937 [p. 9-185] and the central polar basin [p. 185-230] are described. The polar basin is a large water reservoir with depths approximately 4,000-5,000 m. Warm water from the Atlantic, enters the polar region through a strait between Greenland and Spitsbergen, and cold water is discharged into the Atlantic west of Greenland. Nearly all the polar basin is filled with warm Atlantic water to a depth of 200 to 800 m. The water temperature varies from  $-1.5^{\circ}$  C. to  $-1.7^{\circ}$  C. on the surface and decreases by 0.2-0.3 degrees at a depth of 50 m. The temperature increases to  $1.0^{\circ}$  C. wherever Atlantic waters are encountered. The salt content is approximately 2.9-3.2 per cent in the upper layers and may be 3.5 percent or higher at a depth between 25 and 250 m. [etc.]"—SIPRE. The historical part was greatly expanded and brought up to date, and the scientific part extended in a later (1949) edition of this work (see *Arctic Bibliography* No. 9612).

**23638. LANG, ARTHUR HAMILTON, 1905-.** Canadian deposits of uranium and thorium, interim account. Ottawa,

1951. vii, 157 p., fold. map, fold. table. (Canada. Geological Survey. Paper 51-10) Mimeographed.

Contains general section (p. 10-40) on types of Canadian radioactive minerals and deposits, the distribution of these deposits, ages and origin of mineralization, economic considerations, prospecting and exploration. Then follow descriptions of areas and properties (p. 41-139) including Yukon Territory (p. 41) and Northwest Territories (p. 47-64). Bibliography (107 items).

Copy seen: DGS.

23639. LANG, ARTHUR HAMILTON, 1905-. Summary account of Canadian uranium deposits. (Canadian mining and metallurgical bulletin, Aug. 1950. v. 43, p. 426-33, sketch map, tables; also in: Canadian Institute of Mining and Metallurgy. Transactions, 1950. v. 53, p. 289-96)

Contains short account of the mineralogy of uranium and of types and distribution of occurrences; regional descriptions, including Mackenzie District, and possibilities of prospecting and development. Bibliography (16 items).

Copy seen: DGS.

23640. LANG, KARL. *Priapulus caudatus* Lam. and *Priapulus caudatus*, forma *tuberculato-spinosus* Baird represent two different species. (Arkiv för zoologi, 1951. Ser. 2, Bd. 2, nr. 11, p. 565-68, illus.)

Contains a taxonomic study of the identity of two marine worms of bipolar genus *Priapulus*.

Copy seen: DSI-M; MH-Z.

23641. LANG, KARL. Schwedische Süßwasser- und Moosharpacticiden. (Arkiv för zoologi, 1931. Bd. 22 A, no. 17, p. 1-84, illus.) Title tr.: Swedish freshwater and sphagnum Harpacticidae.

Contains in the first part of this work, a study of the systematics and morphology of minute crustaceans of the fam. Harpacticidae, living in fresh-water basins and peat-bogs of Sweden, with descriptions and comparative tables. In the second part, data are given on geographic distribution, and ecological formations of 14 species of Scandinavian Harpacticidae; bibliography (90 items). The majority of the species are native to northern Scandinavia, the Kola Peninsula and Greenland.

Copy seen: DSI-M; MH-Z.

23642. LANGE, BADIL. The genus *Sphagnum* in Greenland. (Bryologist, June 1952. v. 55, no. 2, p. 117-26)

Contains an account of this moss based on the very extensive Greenland *Sphagnum* collections in the Botanical Museum of the University of Copenhagen; 22 species are dealt with; the northern limits of each species are given together with localities of finds, earlier observations, frequency, etc. Bibliography (22 items).

Copy seen: DA.

23643. LANGE, JOHAN MARTIN CHRISTIAN, 1818-1898. Studier til Grønlands flora. (Botanisk tidsskrift, 1880-81. Bd. 12, p. 132-57, 1-13) Title tr.: Studies on the flora of Greenland.

Contains a botanical and statistical study of the flora of Greenland and comparison with the floras of other arctic regions with list of species common to Greenland and the respective region. Characteristics, endemism, the number of species, genera and families of Greenland flora are discussed. Summary in French, 13 p. at end of vol.

Copy seen: DLC; MH-A.

23644. LANGE, KURT, and L. J. BOYD. The functional pathology of experimental frostbite and prevention of subsequent gangrene. (Surgery, gynecology and obstetrics, Apr. 1945. v. 80, p. 346-50, table)

Contains a report on the effects of mild local hypothermia (in man) and severe local hypothermia (in rabbits); the latter was followed by a period of "complete restoration of circulation and increased capillary permeability," subsequently to give way to capillary and arteriolar occlusion and gangrene. Heparin, administered during the period of circulatory restoration, is claimed to have prevented gangrene in all cases, while the controls had complete gangrene. Bibliography (11 items). Abstract by J. R. Learmonth in *Bulletin of war medicine*, Aug. 1945. v. 5, no. 12, p. 748-49). Copy seen: DLC.

23645. LANGE, KURT, and others. The functional pathology of experimental immersion foot. (American heart journal, Feb. 1948. v. 35, p. 238-47, 7 fig.) Other authors: D. Weiner, and L. J. Boyd.

Contains a report on experiments with rabbits having an extremity immersed in water of 3°-8° C; rectal temperatures, temperature of the cooled leg, respiratory rate and electrocardiograms were taken. Pathological and other changes are dis-

cussed and compared with those in frostbite.

**Copy seen:** DLC.

**23646. LANGE, KURT, and others.** The functional pathology of frostbite and the prevention of gangrene in experimental animals and humans. (Science, Aug. 10, 1945. v. 102, p. 151-52) *Other authors:* L. J. Boyd, and L. Loewe.

*Contains a study on experimental local frostbite using fluorescein as indicator of blood flow; this indicated that thrombus formation and gangrene are preceded by clumping of blood cells. Heparinization prevented the latter and appearance of gangrene in rabbits and in humans. Bibliography (8 items).*

**Copy seen:** DLC.

**23647. LANGE, KURT, and others.** Studies on the mechanism of cardiac injury in experimental hypothermia. (Annals of internal medicine, 1949. v. 31, p. 989-1002, 8 fig., 5 tables) *Other authors:* D. Weiner, and M. M. A. Gold.

*Contains a study on rabbits with local or general experimental hypothermia. Lowering of body temperature was accompanied by a proportional fall in pulse rate, the latter dependent on the direct effect of cold on the pacemaker or its governors; the changes in P-R interval and the QRS complex showed also a roughly proportional relation to fall of body temperature; they also seem to be directly dependent on the effect of temperature on the specific conduction system; the length of systole increased markedly but not in a linear relation with cold, and is largely produced by direct influence of low temperature on the muscle; the T wave changes during hypothermia are entirely the result of anoxia. Bibliography (13 items).*

**Copy seen:** DLC.

**23648. LANGE, KURT, and L. LOEWE.** Subcutaneous heparin in the Pitkin menstruum for the treatment of experimental human frostbite. (Surgery, gynecology and obstetrics, Mar. 1946. v. 82, p. 256-60, 10 fig., graphs, table)

*Contains a discussion of the functional pathology of frostbite and, based on it, heparin therapy of cold lesions is recommended. Eight volunteers with small areas of frostbite treated subcutaneously with heparin, suffered no loss of tissue, while the control lesions showed central necrosis. Bibliography (9 items). Abstract by J. R. Learmonth in Bulletin of*

*war medicine*, June 1946, v. 6, no. 10, p. 428.

**23655. LANTIS, MARGARET, 1906-** . The reindeer industry in Alaska. (Arctic, Apr. 1950. v. 3, p. 27-44, illus., map)

Documented analysis and history of the reindeer in Alaska from 1892 when the government imported domestic reindeer; Eskimo husbandry under government and mission auspices; commercial exploitation by Alaskan companies 1914-1939; and since 1939 the rehabilitation of the reindeer industry for benefit of the Eskimo, by the Reindeer Service of the Alaska Native Service. Includes discussion of herding problems: coast-dwelling Eskimos' adaptation to inland herders' life, forage, pests, predators; technical and economic problems of slaughter and marketing meat, use of hides, etc.; data on size and distribution of herds. Remarks on Eskimos' interest in the reindeer business and ten recommendations for development of herds, exploitation of local markets for reindeer products, and restriction of reindeer

business to native people for 15-20 years. Bibliography (12 items).

**23656. LANTIS, MARGARET, 1906-** . The religion of the Eskimos. (In: Ferm, V. T. A., Forgotten religions. New York, Philosophical Library, 1950. p. 311-39)

Despite the extensive geographic range of their territory and the isolation of some groups, all divisions of Eskimos have a religion uniform in essentials, with regional differences principally of emphasis and elaboration. Author discusses these essentials, noting occasionally regional differences, under the headings: shamanism, cosmology, society and religion. Eskimos of Greenland, Canada, Alaska and Northwest Asia are included in, and Aleuts excluded from the survey. In description of the process of becoming a shaman and of the shamanistic performance, and analysis of the nature of the shamanistic experience and function, author suggests that the shaman's may be a schizophrenic experience though controlled, accepted by the community as a medium through which supernatural powers can be brought to help in human problems. Eskimos' attitude to life, their morality, and beliefs in regard to dieties, human souls, death, and illness, the social importance of ceremonials as "one of the principal means of instructing the young and achieving cooperation and conformity," are discussed and exemplified. In summary author characterizes Eskimo religion, its symbolism of fluidity, individualism without aggressiveness, a "here-and-now orientation," etc., as "strong and satisfying to last through long migrations and subsequent isolation." Bibliography (30 items).

**23668. LARSEN, HELGE EYVIN, 1905-** . Archaeological investigations in southwestern Alaska. (American antiquity, Jan. 1950. v. 15, no. 3, p. 177-186, illus.)

Contains a preliminary report on excavations from seven sites in the Bristol Bay-Kuskokwim Bay area conducted in 1948 with the aid of the Arctic Institute of North America, the U. S. Office of Naval Research and other agencies. Five hitherto unknown stages of Eskimo culture were found. The differences between earlier and later cultures, found in this area are discussed and compared with those at Point Hope. General criteria for distinguishing Paleo- from Neo-Eskimo cultures are proposed on the

basis of the present finds. The latter also suggests that the Neo-Eskimo culture spread beyond Norton Bay as far as the Pacific, and that potsherds may be used as time indicators and may have further significance (in cultural affiliations) than previously assumed. Bibliography (9 items).

**23683. LAUGHLIN, WILLIAM S.** Blood groups, morphology and population size of the Eskimos. (Cold Spring Harbor Symposia on Quantitative Biology, 1950. v. 15, p. 165-73)

A study based on numerous sources and investigations of many Eskimo populations. The author stresses that conclusions based on studies of small populations are misleading due to rapid changes the latter undergo as a result of genetic drift, selection and reproduction. By contrast, data obtained from large population groups show a great similarity of blood groups among Eskimos over the whole extent of their geographical range. Similarly, Eskimos as a whole are relatively homogeneous with respect to such physical characteristics as: large head, face and lower jaw, medium or sub-medium stature with relatively great sitting height; small hands and feet and a generally Mongoloid physiognomy.

**23684. LAUGHLIN, WILLIAM S.** Contemporary problems in the anthropology of southern Alaska. (*In:* Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 66-84, map)

*Contains* analyses of evidence of an early Eskimo homeland in southwestern Alaska; the relation of the three branches of Eskimo linguistic stock, Inupik and Yupik dialects, mutually intelligible, but Aleut not so, and its implications in regard to Eskimo migrations and early

occupation of southern Alaska. Anthropological, anthropometric blood-group and population studies are surveyed and the status of archeology and ethnology appraised in relation to immediate problems and needed research. Bibliography (17 items). *Copy seen:* DAI; DLC.

**23685. LAUGHLIN, WILLIAM S., and G. H. MARSH.** A new view of the history of the Aleutians. (Arctic, Sept. 1951. v. 4, p. 75-88, illus.) Reprinted in: Yearbook of physical anthropology, 1951, pub. by Wenner-Gren Foundation for Anthropological Research, Inc., New York. v. 7, p. 60-74; illus.

Account of work conducted during preceding three summers by parties of anthropologists, archeologists and medical workers, at Nikolski village on Umnak Island, at Atka on Atka Island and at St. Paul Island in the Pribilofs. The results of this work are correlated with those of earlier investigators in a summary account of the physical anthropology, archeology, ethnology and linguistics of Aleuts. Conclusion: the Aleuts appear to have moved from the Alaskan mainland in two waves, one beginning 4,000 years ago, the other within the last 1,000 years and still continuing at the time of the Russian discovery of the area. The culture of the entire span of occupation was continuous. The great numbers of Aleuts and other Eskimos in southern Alaska possibly arose through a "population explosion" brought about by very favorable living conditions existing here when the first proto-Eskimos came south, along the west coast of Alaska. Of the 16,000 Aleuts estimated to have lived in the area prior to the white man's penetration, only 1,200 remain. Early massacres, exhaustion of marine resources, diseases, etc., all caused by Europeans, contributed to the decline of the population, which still continues. Bibliography (14 items). *Copy seen:* DLC.

**23686. LAUGHLIN, WILLIAM S.** Notes on an Aleutian core and blade industry. (American antiquity, July 1951. v. 17, no. 1, p. 52, 54-55, illus.)

The possibility of a culture earlier than paleo-Aleut is discussed in connection with a collection of artifacts from a hilltop on Ananiuliak Island, five miles north of Nikolsky Village (near Umnak Island, about 52°56'N. 168°53'W.) The artifacts collected in 1938 are illustrated and discussed.

**23688. LAUNIS, ARMAS.** Lappische Juoigos-Melodien; gesammelt und herausgegeben. Helsingfors, 1908. lxiv, 209 p. 712 musical examples. (Suomalaisugrilainen seura. Toimituksia, no. 26)

*Title tr.:* The melodies of the Lapp juoigos (songs); collected and edited.

The author visited Lapland twice (in 1904 and 1905), and noted 824 melodies, mostly in the parishes of Inari, Kautokeino, and Karasjok. He gives here a musical analysis of those melodies. The "juoigos" is a song about a certain person or object which has attracted the singer's attention. Such songs about rather prominent or ill-famed individuals may be laudatory or derisive in character, but the singer may not sing of himself. Both singers and auditors know to whom a song is addressed, and the subject of a derisive song becomes angry on hearing only the murmur of the melody of "his" song. The Lapps are not only apt at keeping to the tune, but are able to distinguish between two only slightly different airs. The melodies are more important than the texts which are unstable and often interwoven with interjections. The creators and bearers of "juoigos" are the mountain or reindeer Lapps, who make songs to relieve their loneliness and who have in mind also that wolves are scared away by the singing of a man. The religious sect of Laestadians, which eschews secular pleasures, has succeeded in silencing "juoigos" in some regions.

**23694. LAVROV, N. P.** K biologii ondatry (*Fiber zibethicus* L.) (Zoologicheskii zhurnal, 1933, t. 12, vyp. 1, p. 86-100) **Title tr.:** The biology of the muskrat *Fiber zibethicus* L.

Contains a study of biology of the musk-

rat introduced from North America into the northern regions of the U. S. S. R. (Kola Peninsula, Arkhangel'sk province, northern Ural, Solovetskiye Islands, western Siberia and Yakutia). The investigation was carried out (on the Moscow farm for the breeding of wild animals) on muskrats brought from northern Canada and it was concerned mostly with the reproduction of these rodents. Summary in English. **Copied seen:** DLC; MH-Z.

**23698. LAWRENCE, DONALD BUERMANN, 1911–** . Glacier fluctuation for six centuries in southeastern Alaska and its relation to solar activity. (Geographical review, Apr. 1950. v. 40, p. 191–223, illus., 5 maps)

The author, leader of the plant ecology unit of the Juneau Ice Field Research Project, 1949, based his studies on tree-growth layer investigations as indicators of advance and recession of glaciers. He describes individual glaciers and offers a tentative hypothesis on recent glacier periodicity based on sunspot minimum 1645–1715 and moraine formation. "Glaciers in the Juneau region have retreated 1.3 to 5 miles since 1765, before which they seem to have advanced in unison from some time before 1300. Similar conditions have occurred in the Glacier Bay, British Columbia and the Mt. Hood glacier fields. The accelerated retreat of all except Taku Glacier (which has advanced since 1900) during the past 75 years is attributed to increased solar activity—the advance up to 1765 to a dearth of sunspots for several hundred years. Many excellent photographs and charts of glaciers, and several periodograms relating glacial events to solar cycles are included."—*Meteorological abstracts and bibliography*, Nov. 1950. v. 1, no. 11, p. 728. Bibliography (44 items).

**23699. LAWRENCE, DONALD BUERMANN, 1911–** . Recent glacier history of Glacier Bay, Alaska, and development of vegetation on deglaciated terrain with

special reference to the importance of alder in the succession. (*In: American Philosophical Society, Year Book, 1950, pub. 1951, p. 175-76*)

Contains brief report on experiments (in Southeast Alaska approx. 58°30' N. 136° W.) with a series of chemical and natural fertilizers and their effect on established saplings of cottonwood (*Populus trichocarpa hastata*). The experimental plots were laid out in summer 1949 on a till plain which had been ice-free for 12-20 years. Specimens of wood were also collected from interstadial fossil forests for age determination with radiocarbon in order to learn when and at what rate the glacier advance took place.

**23700. LAWRENCE, EDWARD.** Syphilis: as an anthropologist sees it. (Medical press and circular, 1941. v. 205, p. 300-303)

Discussing the problem of the geographical origin of syphilis, the author quotes Hrdlička as claiming that there is no evidence that the disease originated in America. In Alaska the advent of the white man is known to a year (1743) and skeletons identified chronologically by the introduction of new (Russian) forms of burial and also of glass crockery and metals; "and it is only with these articles that commences the appearance of syphilitic and also tubercular lesions on the skulls and bones. Among the many hundreds of skeletons of older derivation, there is not a trace of any of these diseases." (Quoted from Hrdlička's letter to the author). Bibliography (16 items).

**23702. LAZAREV, ALEKSEĬ PETROVICH.** Zapiski o plavanii voennogo shľupa Blagonamerennogo v Beringov proliv i vokrug sveta dlĭa otkrytiĭ v 1819, 1820, 1821 i 1822 godakh vedennyye gvardelskogo ėkipazha letenantom A. P. Lazarevym. Moskva. Gosudarstvennoe izd-vo geograficheskoi literatury, 1950. 475 p., illus., maps (2 fold.) **Title tr.:** Notes on the voyage of the naval sloop *Blagonamerennyĭ* into the Bering Strait and around the world for discoveries, in 1819, 1820, 1821 and 1822, kept by the guards' Lieutenant A. P. Lazarev.

Text of Lazarev's diary (with minor omissions) preceded (p. 11-94) by an introductory chapter by A. Soloviev, on the expedition, its personnel, aims and place in Russian Arctic and Pacific exploration. The diary contains details of the itinerary from Kronstadt via Rio de Janeiro — Cape of Good Hope — Port Jackson to Bering Sea and its islands and coasts; thence via San Francisco to Hawaii, back to the Bering Sea and ultimately home to Kronstadt. The extensive cruising in the Bering Sea area were utilized for geographical, astronomical and oceanographic observations and measurements. Information is given on: the islands of the area (Unalaska, St. Lawrence Island); harbors (Petropavlovsk in Kamchatka, Novo-Arkhangelsk, now Sitka); Russian colonies in America and their administration; the natives (Chukchis) on the Asiatic side and those on the American side (Aleuts). Occasional meetings of the *Blagonamerennyĭ* (under G. S. Shishmarev) with the companion ship *Otkrytie* (under M. N. Vasil'ev) are noted. These two ships were part of a four-vessel expedition financed by the government to circumnavigate the globe and explore arctic and antarctic regions, the latter under Belingshausen with the *Vostok* and *Mirnyĭ*. The former, under Vasil'ev, were to attempt a northwest passage from the Pacific through the North American arctic waters to the Atlantic. In three efforts in 1820 and 1821 the ships penetrated through Bering Strait into Chukchi Sea (71°06' N. 166°08' W.) and along the Alaskan coast to about 70°40' N. 161°27' W.

"Data collected during 1934-1935 at Kresty, 1935-1937 at Cape Baskakov, 1935-1936 on the Kolyma and Lena Rivers, and 1927-1928 on the Yana River were analyzed to determine the effect of temperature variation on the rate of ice formation. A number of formulas developed since 1873 are reviewed and discussed in terms of applicability for rates of water flow of less than 0.5/sec. The formulas of Zubov, Stefan, Tamura, and Bydin are compared with empirical data obtained on Volga and Svir Rivers. The optimum agreement between the theoretical calculations and the data of 19 polar stations was obtained with Lebedev's formula. This formula considers the thickness of ice as a function of the sum of the average daily air temperatures below 0° C and the thickness of the snow cover."—SIPRE.

**23733. LEGGET, ROBERT F., and F. L. PECKOVER.** Notes on some Canadian "silt." (International Conference on Soil Mechanics and Foundation Engineering. 2d, Rotterdam, June 1948. Proceedings. v. 3, p. 96-100, illus., map, diags. *Also pub.* as: National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum no. 13, June 1949)

"The silt soils of the Canadian Shield area [which includes most of subarctic and arctic Canada] are fine grained soils having some of the characteristics of clay. The soils appear as small granular particles under the electron microscope. The undisturbed soils behave normally. When agitated, the soils become fluid and cause sliding, sinking, and mud-runs. It is suggested that combined water is released upon agitation which produces a fluid mass. Further investigation is necessary before large scale construction can be carried out in these areas."—SIPRE.

**23734. LEGGET, ROBERT F.** Soil mechanics in Canada. Ottawa, 1949. 3 p. (Canada. National Research Council, Tech. Memo. 13)

This paper, one of a series of seven Canadian papers presented at the second International Conference on Soil Mechanics and Foundation Engineering held at Rotterdam, 1948, outlines the growth and present status of soil mechanics in Canada. Five aspects are under investigation by the National Research Council, namely track studies, which involve the inter-relationship of soil mechanics and

the mobility of tracked and wheeled vehicles; permafrost in its relationship to building problems in the Canadian north-land; muskeg; snow and ice; and civilian soil mechanics. The most recent Canadian development is the establishment of the Division of Building Research in the National Research Council.

**23736. LEHTISALO, TOIVO VILHO, 1887-.** Beobachtungen über die Jodler. (Suomalais-ugrilainen seura. Aikakauskirja, 1937. v. 48, no. 2, p. 1-35) **Title tr.:** Observations on the yodel.

Contains a comparative study among the Eskimos, Lapps, Ostyaks, Voguls, Samoyeds, and Arkhangel'sk Karelians, of the yodel, a more primitive type of singing than that of the ordinary folk songs of more advanced peoples. Author considers the text and formal structure (meters), but not melody and rhythm of yodels. Those of the Lapps and Samoyeds are more primitive and have no meter; those of the Ostyaks are more developed. The Vogulian and Ostyakian yodel has alliteration and parallelism; the Lapp, parallelism of verses and Samoyed that of words. The refrain is common to all. The content of yodels may be of magic, profane or humorous nature. Shamanistic songs have some words and cries in a "language of the spirits" understood by shamans only.

**23737. LEHTISALO, TOIVO VILHO, 1887-.** Entwurf einer Mythologie der Jurak-Samojeden. Helsinki, 1924. 171 p. 24 illus. (Suomalais-ugrilainen seura.

Toimituksia, no. 53) **Title tr.:** A sketch of the Yurak-Samoyed mythology.

Contains myths, shamanistic songs and traditional beliefs in German, collected during the author's second expedition to the Yurak or Forest Samoyeds of Tobolsk government in 1914. He found some of these people baptized, but their pre-Christian beliefs and practices still in use, and the deities of both old and new faiths respected in practice. The census of 1897 showed 4,450 Samoyeds living in Tobolsk gov. of whom 987 were baptized, and seven able to read. Author reports all the Yurak Samoyeds living in tents, their chief occupation fishing and squirrel-hunting, their cultural niveau very low, although they have an abundance of mythological beliefs. This book is rather a collection of first-hand material than an investigation, and consists of following chapters: legends of cosmogony and the spirits of heaven; spirits of earth and the netherworld; the sacred animals; the holy places and its spirits (includes description of idols and sacrificial ceremonies); spirits of the tent, impurity and rites of purification; cult of dead; the magician.

**23743. LEHTISALO, TOIVO VILHO, 1887-** . Der Tod und die Wiedergeburt des künftigen Schamanes. (Suomalais-ugrilainen seura. Aikakauskirja, 1937. v. 48, no. 3, p. 1-34) *Title tr.:* Death and resuscitation of a future shaman.

Contains beliefs and narratives of shamans who were convinced that once during a sickness they were killed by spirits, cut into pieces and cooked, later put together again and revived; thus they acquired the power to shamanize. Specimens of such narratives are given from several Samoyedic tribes (Tawgis, Yuraks, and Ostyak Samoyeds). Similar ideas and narratives have been recorded among the Yakuts, Buryats, and Tungus. According to the Gilyaks, the spirits do the same with a shaman's body as men do with a bear at its festival. Beliefs about tearing asunder a shaman's body and later putting it together are known to the Eskimos, Voguls, American Indians, and in Australia. Yakuts and

Tungus have myths about the birth of a shaman and the origin of his soul.

**23751. LEIGHTON, FREEMAN BEACH.** Investigations in the Taku Glacier firn. (In: Miller, M. M., & others. Scientific observations of the Juneau Ice Field Research Project, Alaska 1949 Field Season, 1952, p. 23-48, incl. tables, diagrs.)

"Qualitative and quantitative measurements of meltwater, its generation and movement in the firn, and its influence on firn structures are presented. Meltwater collection pans located directly above and below ice structures indicate

that the concentration of meltwater is influenced by ice structures in the firn. The correlation of meltwater flow with meteorological data is discussed. Capillarity is dominant in the meltwater movement until the water in the firn exceeds capillary saturation, when gravity becomes the controlling force. Observations on diurnal surface crusts are reported and suncups discussed. Suncups are due to differential melting caused by the concentration of the sun's rays on the north slopes of slight depressions. A study of ice layers and ice columns in the firn shows that they are formed by the refreezing of downward percolating meltwater. The cycle of summer meltwater is presented."—SIPRE.

**23752. LEIGHTON, FREEMAN BEACH.** Ogives of the East Twin Glacier, Alaska, their nature and origin. (Geological Society of America. Bulletin, Dec. 1951. v. 62, p. 1505)

Abstract of paper submitted at the Society's meeting in Los Angeles, Mar. 23-24, 1951. **Copy seen:** DGS.

**23753. LEIGHTON, FREEMAN BEACH.** Ogives of the East Twin Glacier, Alaska; their nature and origin. (Journal of geology, Nov. 1951. v. 59, p. 578-89, illus., 3 plates)

Results of studies made during the Juneau Ice Field Research Project, 1949, on a portion of the Taku Glacier system. Critical analysis is given of previous hypotheses of the origin of ogives (= dirt bands), and discussion of Max Demorest's glacier flow theory in relation to their formation. "Ogives are series of curved layers of debris-rich ice forming large-scale pointed arches on a glacier. The ogives of East Twin Glacier, Alaska represent unusually perfect examples for study. These ogives are believed to be the exposed edges of layers of denser and dirtier ice than the intervening layers. The uniform spacing of the ogives seem to indicate that they were formed by periodic obstructed extrusion flow down-glacier from an icefall. Debris, originally basal, became the surface manifestation by upthrusting and ablation."—SIPRE. Bibliography (30 items).

**23757. LEITCH, ADELAIDE.** Village with a mission, Nain, Labrador. (Canadian geographical journal, Mar. 1950. v. 40, p. 102-113, illus.)

Journalist's description of this old settlement and its environs on the coast of Labrador, its Eskimo and White inhabitants, their way of life throughout the year, school, mission, and living conditions. **Copy seen:** DGS; DLC.

**23758. LEIVISKÄ, ILVARI GABRIEL, 1876-** . Maapallon jäähtyminen ja hiilikauden kasvillisuus. (Terra, 1946. 58, p. 6-12, map) **Title tr.:** The cooling of the earth and the flora during the coal age.

Author quotes the known theory that during the Tertiary, and even more so during the Cretaceous periods, arctic areas like Spitsbergen and Greenland had a moderate climate. Similar condition prevailed in the southern hemi-

sphere. He opposes the idea that in those periods a uniform, warm climate prevailed over the whole globe, and claims that climatic zones then did exist. The mild climate of the Arctic is explained to have been due to a generally higher temperature of the earth's surface owing to heat radiating from the interior of the earth, which in those times was greater than today. The glacial periods, which appear to contradict the notion of a generally warmer climate, are explained as limited, local phenomena. Summary in German.

**23764. LEMPKE, ROBERT E., and H. B. SHUMACKER, Jr.** Studies in experimental frostbite, III. An evaluation of several methods for early treatment. (Yale journal of biology and medicine, 1949. v. 21, p. 321-34, illus., tables, graphs.)

Report on methods for early treatment of frostbite as applied to a standard cold injury of the mouse tail. Rapid thawing and immediate heparinization were moderately effective, while blocking of the sympathetic ganglia with tetraethylammonium ion was possibly of some benefit. Prolonged maintenance of vasodilatation through tetraethylammonium after initial rapid thawing, produced the best results. Rapid thawing followed by direct application of mild heat was of less value than rapid thawing alone. Early treatment of frostbite by local application of cold, resulted in an increased loss of tissue. The results support the view that "the gangrene following frostbite is due to the direct effect of cold on ischemic tissue, with subsequent obliteration of the arterial tree by thrombosis." (—From summary). Bibliography (19 items).

**23777. LEPAGE, ERNEST, 1905-** . Le dynamisme dans la flore de la toundra en Alaska. (Association canadienne-française pour l'avancement des sciences, Montreal. Annales de l'ACFAS, 1949. v. 15, p. 115-17) **Title tr.:** Dynamism in the tundra flora of Alaska.

Three stages of vegetative cover (aquatic, marsh and heath plants) as they occur on Alaskan tundra, raise the question of evolution of the vegetation and of successions. The author shows that (1) in Northern Alaska the sphagnum heath indicates permafrost; that (2) the age and (3) the nature of the substratum of a locality can be judged by the vegetation.

Contains general remarks on the reindeer and its habitat; the tundra-taiga area of Eurasia and America, its human and animal population, role of the reindeer in its economy. Then follows account of three reindeer cultures. The first prehistoric races depending on reindeer in Europe; their migration to the east and west. Second reindeer culture: North American Arctic, the Eskimos and animals associated, particularly seal and reindeer; northern Asia, its Finno-Ugric, Turk-Mongol, and "palaearctic" (Chukchi, Yukaghir, Koryak, Kamchadal) peoples, their cultures and the role of the reindeer therein. Third reindeer culture: domestication by Lapps, Samoyeds, Tungus, Yakuts, Koryaks and Chukchis. Includes remarks on sledges, pastures,

etc., and finally, discussion of the changing role of the reindeer as northern native cultures became adjusted to that of temperate-zone man. **Copy seen:** DLC.

**23796. LEVANDER, KAARLO MAINIO, 1867-1943.** Tierphänologische Beobachtungen in Finland 1907. Helsingfors, 1909. 90 p. (tables, map). (Bidrag till kännedom af Finlands natur och folk. Häfte 67, no. 3) **Title tr.:** Animal phenological observations in Finland 1907.

The report for this year is arranged according to species and not according to stations as previously, thus emphasizing its biological character. It is divided into two sections: a larger one comprising the phenology of birds, and a smaller one, that of common frogs, fishes and insects. The species are arranged in taxonomic order. The phenology of birds includes: hibernation, spring migration, brooding (including nest building and courting), and fall migration. Number of observation points: 70, four of them above the Arctic Circle.

**Copy seen:** DLC.

**23797. LEVANDER, KAARLO MAINIO, 1867-1943.** Tierphänologische Beobachtungen in Finland 1908. Helsingfors, 1917. 82 p. (tables). (Bidrag till kännedom af Finlands natur och folk. Häfte 77, no. 3) **Title tr.:** Animal phenological observations in Finland 1908.

Observations from 75 stations, five north of the Arctic Circle, covering 149 species of birds, nine of fishes, seven insects, one amphibian, arranged in the new (taxonomic) way as in 1907.

**Copy seen:** DLC.

**23798. LEVANDER, KAARLO MAINIO, 1867-1943.** Tierphänologische Beobachtungen in Finland 1909. Helsingfors, 1917. 102 p. (tables). (Bidrag till kännedom af Finlands natur och folk. Häfte 77, no. 4) **Title tr.:** Animal phenological observations in Finland 1909.

Covers practically the same area and species as were reported for 1908 by the same author.

**Copy seen:** DLC.

**23810. LEVINE, NORMAN D.** *Eimeria dicrostonicis* n. sp., a protozoan parasite of the lemming, and other parasites from arctic rodents. (Illinois State Academy of Science. Transactions, 1951. v. 44, p. 205-208, illus.)

Contains a report on an examination of feces of lemmings and other rodents, collected by H. C. Hanson during the 1949 Perry River Expedition, in the Mackenzie-Keewatin Districts border region. The new species of *Eimeria* which is described in detail, including the oöcysts, was found in five out of 14 specimens of the varying lemming, *Dicrostonyx groenlandicus richardsoni*. Bibliography (8 items).

**Copy seen:** CaMAI.

**23811. LEVINE, VICTOR E.** Ascorbic acid content of the blood of the Eskimo. (Journal of biological chemistry, May 1940. v. 133, p. lxi)

Contains a report on an examination of 30 Eskimo children at Point Barrow, Northern Alaska Jan. 1938; subacute scurvy was found in 28 of them due to scarcity of fresh meat and of berries; disorders of the respiratory tract, and severe tuberculin reactions were diagnosed.

**Copy seen:** DLC.

**23812. LEVINE, VICTOR E.** The basal metabolic rate of the Eskimo. (Journal of biological chemistry, June 1939. v. 128, p. lix)

Contains a summary of a study made on 11 male and 12 female Eskimos at Point Barrow, between Aug. 1937 and Aug. 1938. Complete medical examination was made to insure normality. 18 subjects showed normal metabolic rates while one male and four females showed high rates, indicating a condition similar to those found in the temperate zone among other races.

**Copy seen:** DLC.

**23813. LEVINE, VICTOR E., and M. N. JORGENSEN.** Urinary chlorides and blood chlorides in the Eskimo. (Journal of biological chemistry, 1941. v. 140, p. lxxvii-lxxviii)

Contains a report on determinations made on Point Barrow Eskimos living on a native, mixed or white-man's diet. Urinary chloride level depended on the chloride intake; the whole blood chloride of subjects living on a native or mixed diet were the same as those of the white man; data on urinary nitrogen are also given.

**23816. LEVOSHIN, N. N.** Drevniiia stoianka v verkhov'iaakh r. Īakitikive-ma (Chukotskiĭ poluoostrov). (Akademiia nauk SSSR. Institut istorii material'noi Kul'tury. Kratkie soobshcheniia, 1950. vyp. 31, p. 193-95, illus.) Title tr.: An ancient settlement at the sources of the Yakitikiveyem River (Chukotsk Peninsula).

Contains a brief report on stone weapons and other implements found in 1947 "in the central part of the Chukotskiy Peninsula . . . on the River Yakitiki-

veyem" (67°39' N. 179°30' W.), the earliest remains ever found in this region. Description is given of the location, the finds and their materials. These artifacts were found on the surface; indications of the existence of a settlement there in very ancient times are presented. This paper is discussed by L. Krader's *Neolithic find in Chukchi Peninsula*, 1952, q. v., and the finds were classified and evaluated by A. P. Okladnikov, q. v.

**23829. LIHTONEN, V.** Metsäluonnon pysyvät ja muuttuvat ominaisuudet topografisen kartoituksen perusteina. (Terra, 1944. 56:2, p. 64-68) **Title tr.:** The permanent and variable characteristics of forest landscape with respect to topographic mapping.

Includes data on the swamp and forestry-biology problems in the far North that make it difficult to set definite rules in topographic mapping. Summary in German.

**Copy seen:** DLC.

**23830. LIHTONEN, V.** Mitä Perä-Pohjolan metsät lupaavat? (Metsätaloudellinen aikakauslehti (Finska forst-föreningen), 1950. v. 65, no. 5, p. 123-26) **Title tr.:** Prospects of the forests in the far North.

Outline of the principle features of a forestry policy for the Kemi River forest areas, with a view to (1) raising the output of these forests to that of normal natural forests, (2) maintaining the annual cutting rate at a stable level, and if possible (3) raising that level. Author notes current measures towards these ends and suggests further means towards increasing both yield and production in this northern Finnish forest area. Summary in English.

**Copy seen:** DA.

**23831. LIHTONEN, V.** Piirteitä valtion metsätaloudesta. Helsinki, 1949. 46 p., illus., diags., maps. (Silva fennica, 66) **Title tr.:** Features of state forest economy.

Contains description of the government-owned forests of Finland, about 61.5 per cent of which are in the North, their comparison on a (four) regional basis; history of state forest ownership; distribution of the forests and transportation conditions; comparison of state and privately-owned forests; state forest management; sales; selective cutting, its purposes, quantity and costs; reforestation; swamp drainage; protection from fires; national parks; development of forest economy. **Copy seen:** DLC.

**23832. LIHTONEN, V.** Tutkimuksia hakkuutoiminnan voimaperäisyyden teki-  
jöistä ja tunnuksista pääasiallisesti val-  
tion metsätaloudesta saadun aineiston  
valoosa. Helsinki, 1948. 144 p., illus.,  
maps, tables, diags. (Acta forestalia  
fennica, 55:3) **Title tr.:** Investiga-  
tions of factors and characteristics in-  
fluencing the intensity of timber cutting,  
based mainly on government forest  
economy material.

Contains data on the economic geog-  
raphy of the state forests, amount of  
timber cut, 1924-43, developing the  
'economic results' ("the difference be-  
tween income and expenditure of the  
forest districts expressed in marks per  
hectare of productive forest land"), the  
volume and intensity of timber cutting  
and the economic result. Conclusion:  
improved transportation facilities are  
needed for fuller utilization of state  
forest resources; floating motor-road and  
railroad transport is recommended for  
the northern part of the country where  
timber resources are richest. Map (p. 21)  
shows localities of industrial activity  
in northernmost Finland in relation  
to timber resources. Bibliography (30  
items). Summary (also caption and  
index of tables, etc.) in English, p. 136-44.

ceren. Upsala, E. Berling, 1901. ii, vi, 701 p. plates 1-87. (Societas scientiarum Upsaliensis. Nova acta, ser. 3, v. 19) **Title tr.:** Cladocera of Sweden or contributions to the knowledge of crustaceans of the order Branchiopoda, suborder Cladocera, living in Sweden.

**Contains** a critical revision of all known branchiopods of the suborder Cladocera, living in fresh-water basins of Sweden, with data on general characteristics and systematic subdivision of the suborder. A systematic enumeration of about 150 species of these crustaceans is given, with Latin diagnoses, synonyms, descriptions, critical notes and data on habitat and on distribution in Sweden also other countries. Bibliography (39 items), index, and (p. 665-701) explanations to the tables. Some species native to Swedish Lapland are included. **Copy seen:** MH-Z.

**23852. LILLJEBORG, WILHELM, 1816-1908.** Descriptions de deux espèces nouvelles de *Diaptomus* du Nord de l'Europe. (Société zoologique de France. Bulletin, 1888. t. 13, no. 6, p. 156-58) **Title tr.:** Descriptions of two new species of *Diaptomus* from the European North.

**Contains** Latin diagnoses of two crustaceans, *Diaptomus graciloides* and *D. serricornis* n. spp., collected in fresh-water basins of the Kola Peninsula, during the expedition of H. Sandeberg in 1877.

**Copy seen:** MH-Z.

**23853. LINBERG, B. Z.** Primenenie tsitotoksicheskoi antiretikul'farnoi syvotki akad. A. A. Bogomol'sa pri lechenii nekotorykh ranenii i otmorozhenii v tylovom evakogospitale. (Sovetskaiâ meditsina, 1943. god 7, no. 1, p. 4-5) **Title tr.:** The application of cytotoxic antireticular serum of Bogomolefs in the cure of some wounds and frostbite in the rear evacuation hospitals.

**Contains** an account based on 109 cases, 24 of them frostbite. In treating wounds and frostbite, the serum was not used as a basic method, but as an agent supporting the low reaction of the connective tissue; in 50 percent of cases of frostbite a decisive improvement of the healing process was noted.

**23854. LINCOLN, FREDERICK CHARLES, 1892-** The migration of North American birds. Washington, D. C. 1935. 72 p. illus., maps (U. S. Dept. of Agriculture. Circular no. 363).

Supersedes Dept. bulletin 185, *Bird migration*, by Wells W. Cooke, 1915.

**Contains** sections on migration, its advantages, causes, theories; times of migration; speed, altitude, orientation, etc.; distances and destinations; migration routes and their evolution; vertical and vagrant migration; migration in relation to weather, its perils and other problems. Since migration is almost exclusively in a north-south (and vice versa) direction, numerous references to arctic areas and to species spending the summer within them, are found in the text, e. g.: northern areas and theory of migration (p. 5-6); migrations of black and white warblers (p. 9-10), the cliff swallow (p. 13), Canada goose (p. 17), arctic tern (p. 31-33), golden-plover (p. 39-42), and many other species. The chapters "Routes of migration" (p. 33-52) and "Evolution of migration routes" (p. 52-55) are to a large extent concerned with arctic areas and problems. Bibliography (46 items). A second edition with slight change was published in 1950 under the title "Migration of birds" (U. S. Fish and Wildlife Service, Circular no. 16) and is reviewed in *Arctic*, Nov. 1952. v. 5, no. 1, p. 56-57. A trade edition entitled "The migration of American birds" (New York, Doubleday, Doran & Co., 1939, xii, 189 p.) covers much the same field.

**23855. LINDAHL, ERIK, and JOHAN ÖHRLING.** Lexicon lapponicum, cum interpretatione vocabulorum sveco-latina et indice svecano-lapponico [etc.]. Holmiae, typis Joh. G. Lange, 1780. [iii]-3 p. l, lxxx, 716 p. **Title tr.:** Lapp dictionary with words explained in Latin and Swedish, and a Swedish-Lappish index.

**Contains** a foreword by Johan Ihre in Latin and Swedish (p. i-xxix); an "epitome of Lappish grammar" (p. xxx-lxxx) also in Latin and Swedish by Joh. J. Öhring. Then follows the Lappish-Latin-Swedish dictionary (p. 1-584) and finally the smaller Swedish-Lappish vocabulary (p. 585-716). This is the literary "southern Lappish", later used in the bible (1800-11) and hymn books (1849-95). According to Wiklund, it is an artificial language, a compound of various southern dialects, the basis being that of Västerbotten.

**23857. LINDBERG, G. U., and A. P. ANDRIĀSHEV.** Obzor roda *Sarritor*, Cramer (Pisces, Agonidae) iz dal'nevostochnykh morei. (In: Akademiia nauk SSSR. Zoologicheskii institut. Issledovaniia dal'nevostochnykh morei SSSR. vyp. 2, 1950, p. 293-302, illus.) **Title tr.:** A review of the genus *Sarritor* Cramer (Pisces, Agonidae) from the Far Eastern seas.

Contains a review of this genus from the Japan, Okhotsk and Bering Seas, areas hitherto little studied with regard to these fishes. The study is largely based on collections of the Zoological Institute of the Academy of Sciences of U.S.S.R., made during recent years, and deals mainly with the taxonomic status and geographic distribution of the component forms. A section on generic characteristics with a key to species precedes the treatment of the species and lower units. Morphology, comparative data, color distribution, etc., are given for each form.

**Contains** descriptions and data on the ecology and geographic distribution of six beetles (one new) of the genus *Haltica*, native to eastern Fennoscandia, including *H. oleracea*, *H. sandini* and *H. engstromi*, native to Finnish and Russian Lapland; and a key for the determination of the species.

**Copy seen:** DLC; MH-Z.

**23865. LINDBERG, HÅKAN, 1898-** . Die ostfennoskandischen *Cicadula*-Arten. (Notulae entomologicae, 1937. v. 17, no. 4, p. 141-46, illus.) **Title tr.:** *Cicadula* species of eastern Fennoscandia.

**Contains** a review of the study of homopterous genus *Cicadula* and a list of ten species with localities in eastern Fennoscandia, including *Cicadula 8-notata* and *C. alpina*, native to Finnish and Russian Lapland.

**Copy seen:** DLC; MH-Z.

**23866. LINDBERG, HÅKAN, 1898-** . Über Heteropteren, gesammelt von Y. Wuorentaus im Gouvernement Jenisejsk. (Notulae entomologicae, 1921. v. 1, no. 2, p. 46-51) **Title tr.:** On Heteroptera collected by Y. Wuorentaus in Yeniseysk province.

**Contains** a systematic list of about 100 heteroptera collected by Yrjö Wuorentaus

in the valley of the Yenisey River, western Siberia, during his trip in the summer of 1915, including *Emblethis brevilarsis* n. sp. and 22 species new to the fauna of this region; a few species were collected in the vicinity of Dudinka, near the mouth of Yenisey River.

**Copy seen:** DLC; MH-Z.

**23867. LINDBERG, HÅKAN, 1898-** . Über ostfennoskandische Funde dreier *Callicoriza*-Arten. (Notulae entomologicae, 1951. v. 31, no. 3-4, p. 127-28) **Title tr.:** On finds of three *Callicoriza* species in eastern Fennoscandia.

**Contains** a study of geographic distribution of three related species of aquatic bugs of heteropterous genus *Callicoriza*, including *C. wollastoni* and *C. producta*, native to Finnish and Russian Lapland.

**Copy seen:** MH-Z.

**23868. LINDBERG, HÅKAN, 1898-** . Verzeichnis der von B. Poppius im Lena-Tal gesammelten Heteropteren. (Notulae entomologicae, 1928. v. 8, no. 1, p. 23-29) **Title tr.:** A list of Heteroptera collected by B. Poppius in the valley of Lena River.

**Contains** a systematic list of 70 bugs collected in 1901 by Poppius on his exploring trip from Irkutsk to the mouth of Lena River; most of specimens were gathered in the upper course of the Lena, but some were taken near Zhigansk (67° N.) and further north.

**Copy seen:** DLC; MH-Z.

**23869. LINDBERG, HÅKAN, 1898-** . Zwei neue Fundorte für *Brychius elevatus*. (Notulae entomologicae, 1930. v. 10, no. 4, p. 123-26, illus., text map) **Title tr.:** Two new localities for *Brychius elevatus*.

**Contains** a survey of geographic distribution in Fennoscandia of three subspecies of a very variable aquatic beetle, *Brychius elevatus*; the subspecies *cristatus* is occurring in the Kuusamo region of Finland, and in Finnish and Russian Lapland.

**Copy seen:** DLC; MH-Z.

**23870. LINDBERG, HARALD, 1871-** . Bidrag till kännedomen om skalbaggsfauna i Sverige. (Notulae entomologicae, 1936. v. 16, no. 4, p. 110-22) **Title tr.:** A contribution to the knowledge of the Coleoptera fauna of Sweden.

**Contains** a list of beetles occurring in Sweden, based on collection of the author and Håkan and Pär Harald Lindberg (1640 species), with localities, time of the

find and initials of collector; seven species are new to the fauna of Sweden. Includes a number of species collected by the author in Abisko and Karesuando, Finnish Lapland in 1924.

**Copy seen:** MH-Z.

**23871. LINDBERG, HARALD, 1871-** . *Clambus-arternas utbredning i Finland.* (Notulae entomologicae, 1938. v. 18, no. 2, p. 68-69) **Title tr.:** Distribution of *Clambus* species in Finland.

Contains data on geographic distribution in Finland of four species of coleopterous genus *Clambus*, including *C. punctulum* from Kuusamo and *C. pubescens* occurring in Kemi Lappmark.

**Copy seen:** DLC; MH-Z.

**23872. LINDBERG, HARALD, 1871-** . *Corticariini från Finland i coll. Lindberg.* (Notulae entomologicae, 1938. v. 18, no. 1, p. 64-65) **Title tr.:** *Corticaria* species from Finland in the Lindberg collection.

Contains a list of 23 species (two are new to the fauna of Finland), including eleven species native to the Kuusamo region and Finnish Lapland, collected by the author, and by Håkan and Pär Harald Lindberg.

**Copy seen:** DLC.

**23873. LINDBERG, HARALD, 1871-** . [*Cyphon-arternas utbredning i Fennoskandien.*] (Notulae entomologicae, 1948. v. 28, no. 1-2, p. 57-59) **Title tr.:** [On the distribution of *Cyphon* species in eastern Fennoscandia.]

Contains a study (without formal title) of geographic distribution in eastern Fennoscandia of ten species of genus *Cyphon*, represented by 641 species in the author's collection, including five species occurring in the Kuusamo region and Finnish Lapland; brief data on their ecology.

**Copy seen:** DLC; MH-Z.

**23874. LINDBERG, HARALD, 1871-** . *De till Phyllopecta s. str. (Col. Chrysom.) hörande arternas utbredning i Fennoscandia orientalis.* (Notulae entomologicae, 1938. v. 18, no. 1, p. 21-28, illus., text maps) **Title tr.:** On the distribution of *Phyllopecta* (s. str.) (col. Chrysom.) species in eastern Fennoscandia.

Contains a study of geographic distribution of four species of coleopterous genus *Phyllopecta* (s. str.) in eastern Fennoscandia, with a list of localities for each species (see text maps); includes *P. vittellinae* and *P. polaris* native to Kuusamo, and Finnish and Russian Lapland,

and *P. laticollis* and *P. atrovirens* occurring in the Kuusamo region.

**Copy seen:** DLC; MH-Z.

**23875. LINDBERG, HARALD, 1871-** . *Finlands Gyrophaena-arter (Col., Staph.) och deras utbredning inom landet.* (Notulae entomologicae, 1938. v. 18, no. 2, p. 29-39, illus., text maps 1-5) **Title tr.:** *Gyrophaena* species and their distribution in Finland.

Contains a study of the geographic distribution in Finland of 15 species of rove beetles of the genus *Gyrophaena*, with lists of localities for each species including *G. nana* spreading to Tornea in northern Ostrobothnia, and Salla in Kuusamo, also a table for the determination of the species.

**Copy seen:** DLC; MH-Z.

**23876. LINDBERG, HARALD, 1871-** . *Finlands Hydraena-arter.* (Notulae entomologicae, 1934. v. 14, no. 4, p. 98-100) **Title tr.:** *Hydraena* species of Finland.

Contains descriptive notes and data on distribution of three beetles of the genus *Hydraena* occurring in Finland, including *H. britteni* native to Petsamo in Finnish Lapland, and *P. gracilis* from the Kuusamo region.

**Copy seen:** DLC; MH-Z.

**23877. LINDBERG, HARALD, 1871-** . *Finlands Olibrus-arter.* (Notulae entomologicae, 1938. v. 18, no. 1, p. 67-68) **Title tr.:** *Olibrus* species of Finland.

Contains critical notes and data on distribution of five beetles of the genus *Olibrus*, occurring in Finland, including *O. acneus* and *O. bimaculatus* from the Kuusamo region.

**Copy seen:** DLC; MH-Z.

**23878. LINDBERG, HARALD, 1871-** . *Finlands Sitona-arter (Col., Curc.).* (Notulae entomologicae, 1933. v. 13, no. 3-4, p. 92-103) **Title tr.:** *Sitona* (Col., Curc.) species of Finland.

Contains a key to 11 species of coleopterous genus *Sitona*, a survey of its geographic distribution in Finland, Norway, Sweden and Denmark and a list of 11 Finnish species with localities for each species, including Finnish and Russian Lapland (3 species).

**Copy seen:** DLC; MH-Z.

**23879. LINDBERG, HARALD, 1871-** . *Die nordischen Alchemilla vulgaris-Formen und ihre Verbreitung.* Helsingfors, 1909. 172 p., 35 plates, illus., maps. (Finska

vetenskaps-societeten. Acta Societatis Scientiarum Fennicae, 37:10) **Title tr.:** Northern *Alchemilla vulgaris* forms and their distribution.

A contribution to the problem of the immigration of the Fennoscandian flora with special consideration of the Finnish flora: an historical sketch of this herb of the rose family; key to its species descriptions with localities (in detail) of 15 species; general discussion. Bibliography (about 100 items). **Copy seen:** DLC.

**23880. LINDBERG, HARALD, 1871-** . Nykomlingar till Finlands skalbaggs-fauna. (Notulae entomologicae, 1937. v. 17, no. 1, p. 17-23, illus.) **Title tr.:** Newcomers to Finland's beetle fauna.

**Contains** critical notes on six beetles previously known from various regions of Europe and later found in Finland, including *Aleochara (Coprochara) brundini* and *Atheta (Microdota) spatula* found in the Kuusamo region, and *Thymalus subtilis* discovered in Kuusamo and Petsamo regions of Finnish Lapland.

**Copy seen:** DLC; MH-Z.

**23881. LINDBERG, HARALD, 1871-** . Nykomlingar till Finlands skalbaggs-fauna, II. (Notulae entomologicae, 1938. v. 18, no. 2, p. 40-48, illus.) **Title tr.:** Newcomers to Finland's beetle fauna, II.

**Contains** descriptive and critical notes on 13 species of beetles new to the coleopterous fauna of Finland, including *Halicta opacifrons* n. sp. found in the Kuusamo and Petsamo regions living on *Calluna* and *Empetrum* shrubs, *H. tamaricis* (on *Salix*) from Kemi Lappmark, and *Corticaria munsteri* from the Petsamo region; for continuation see the author's *Nykomlingar III*, 1943.

**Copy seen:** DLC; MH-Z.

**23882. LINDBERG, HARALD, 1871-** . Nykomlingar till Finlands skalbaggs-fauna, III. (Notulae entomologicae, 1943. v. 23, no. 1-2, p. 50-58) **Title tr.:** A newcomer to Finland's beetle fauna, III.

**Contains** critical notes and discussion of distribution of a beetle, *Lomechusa inflata*, first described by Zetterstedt from Lapland, then reported from Norrbotten and finally found by the author in Helsing, the first known location in Finland.

**Copy seen:** DLC; MH-Z.

**23883. LINDBERG, HARALD, 1871-** . *Stenus erichsoni* Rye utgar ur Finlands fauna. (Notulae entomologicae, 1944.

v. 24, no. 3-4, p. 111-12) **Title tr.:** *Stenus erichsoni* Rye in the fauna of Finland.

**Contains** a study of the geographic distribution of a beetle, *Stenus erichsoni*, and another species closely related and often confused with it, *S. coarcticollis*, occurring in Kuusamo and Finnish Lapland.

**Copy seen:** DLC; MH-Z.

**23884. LINDBERG, K.** Contribution à l'étude de quelques cyclopidés (crustacés copépodes) du groupe strenuus, provenant principalement du Nord de l'Eurasie. (Arkiv för zoologi, 1950, pub. 1949. Bd. 1, nr. 8, p. 87-99, illus.) **Title tr.:** Contribution to the study of some cyclops (crustacean copepods) of the group *Strenuus*, originating principally in the Eurasian North.

**Contains** a critical revision of various fresh-water forms of *Cyclops strenuus* and one of *C. furcifer* (Crustacea copepoda) with descriptions of six forms (two new) native to the northern regions of Siberia, West Spitsbergen and Bear Island and a key to 23 female forms, covering all northern regions of Europe, Asia and Alaska. **Copy seen:** DSI-M; MH-Z.

**23885. LINDEMAN, KARL EDUARD-OVICH, 1844-1929.** Obzor geograficheskago rasprostraneniia zhukov v Rossiiskoi Imperii, chast' I. Provintsiia Sïevernaia, Moskovskaia i Turanskaia. (Russkoe entomologicheskoe obshchestvo, St. Petersburg. Trudy, 1871. t. 6, p. 41-360, fold. map) **Title tr.:** A review of geographic distribution of beetles in Russian Empire, part I. Northern, Moscow and Turan provinces.

**Contents include:** a bibliography (144 items), p. 49-58; a general sketch of coleopterous fauna of Russia with a criticism of geographic subdivision of this fauna by some Russian entomologists (Ershov and Fil'd, Mochul'skil, etc.); subdivision proposed by the author, p. 90 (see also the map); data on the Northern province (including Finland, northern European Russia and Siberia), with lists of the species and their distribution within the province, p. 91-139.

**23890. LINDQUIST, BERTIL, 1904-** . *Juncus alpinus* Vill. var. *marshallii* (Pugs.) Lindq. in Scotland and the race differentiation in the species *J. alpinus* Vill. (Acta phytogeographica suecica, 1940. t. 13, Växtgeografiska studier tillägnade C. Skottsberg, p. 121-27, illus., text maps)

Contains a study of the race differentiation in the species of *Juncus alpinus* and its four varieties and their distribution, including var. *rariflorus* covering a wide belt over northern and eastern Europe, right across Siberia to Kamchatka, also var. *alpestris*, an arctic-circumpolar and alpine type and var. *marshallii* occurring in northern Scandinavia; the history of the development of these varieties, their migration and the influence of glaciation is discussed.

**Copy seen:** DA; MH-A.

**23891. LINDQUIST, BERTIL, 1904-** . The main varieties of *Picea abies* (L.) Karst. in Europe, with a contribution to the theory of a forest vegetation in Scandinavia during the last Pleistocene glaciation. (Acta horti bergiani, 1948. Bd. 14, no. 7, p. 249-342, illus., text maps)

Contents: morphological variations in the spruce, p. 250-53; the variations of pubescence in the annual spruce shoots, p. 253-61; distribution of spruce in Scandinavia, p. 261-90; *Picea abies* and its main varieties, p. 291-309; the immigration of the spruce into Scandinavia after the last Pleistocene glaciation, p. 309-325; some notes on the Scandinavian ice-age refuges and their tree vegetation, p. 325-35; literature cited (180 items), p. 335-42.

The region of the study includes Russian, Finnish and Swedish Lapland and northern Norway; a new variety, *P. abies arctica* n. var. (Kola Peninsula and northern Scandinavia) is described on p. 309.

**23892. LINDQUIST, BERTIL, 1904-** . Om den vildväxande skogsalmens raser och deras utbredning i Nordvästeuropa. Uppsala, Almqvist & Wiksell, 1932. 56 p., illus. (Acta phytogeographica suecica, 4) **Title tr.:** The races of spontaneous *Ulmus glabra* Huds. and their distribution in northwestern Europe.

Contains a study of the races of a highly polymorphic elm, *Ulmus glabra*, growing

spontaneously in northwestern Europe, based on a large body of statistical material, with short Latin diagnoses of *U. glabra* var. *scabra*, n. var. occurring in Swedish Lapland and Nordland in northern Norway; also another new variety *montana* and subvar. *dasycarpa* with synonymy, critical notes, data on distribution and a list of localities in Scandinavia, Great Britain and Denmark. Bibliography (96 items). Summary in English. **Copy seen:** DA; MH-A.

**23893. LINDQUIST, BERTIL, 1904-** Studien über die Stammrindentypen der Gattung *Betula* L. (Acta horti bergiani, 1948, pub. 1946. Bd. 14, no. 4, p. 91-132, illus.) **Title tr.:** Studies of stem-rind types of the genus *Betula* L.

**Contains** an attempt at a classification of birches on the basis of their stem-rind characteristics, with descriptions of various types of bark, rind and lenticels, and a list of stem-rind types of birches cultivated in the Bergielund Botanical Garden (Hortus bergianus), including some species native to Swedish Lapland and three specimens of *Betula ermanii* from Hultén's Kamchatka collection; bibliography (42 items).

**Copy seen:** DA; MH-Z.

**23894. LINDQUIST, RUNE.** Polar blackouts recorded at the Kiruna Observatory. [Gothenburg] 1951. 24 p. photos., graphs. (Gothenburg, Sweden. Chalmers Tekniska Högskola. Handlingar, no. 103)

"Polar blackout is the name H. W. Wells gave the phenomenon of fadeout that shows no connection with solar flares, contrary to the ordinary ones occurring in the lower latitudes. The phenomenon was studied by E. V. Appleton (1932-1933) and by Bramholt and Seaton (1941). In the present study at Kiruna (67°50' N., 20°14.5' E., geomagnetic coordinates 65°19' N., 115°30' E.) a panoramic recorder (frequency range 1-16 Mc/s in 30 sec.) and a recording magnetometer were used. The preliminary results indicate that an abnormally high absorption, caused by the impact of some ionizing agent (maximum probably occurs below the 100 km. level)—some sort of corpuscular bombardment—is the cause."—*Meteorological abstracts and bibliography*, Sept. 1952. v. 3, no. 9, p. 911.

VALD, see LINDQUIST, BERTIL, 1904-**

**23895. LINDQVIST, EITEL.** Einige neue Nematinen-Arten und -Aberrationen (Hym. Tenthr.). (Notulae entomologicae, 1941. v. 21, no. 2, p. 64-70) **Title tr.:** Some new species and aberrations of Nematinae (Hym. Tenthr.)

**Contains** descriptions of two new species and seven new aberrations of sawflies, including *A. helleni* n. sp., native to Finnish and Russian Lapland and Kuusamo and three new aberrations from Finnish and Russian Lapland.

**Copy seen:** DLC; MH-Z.

**23896. LINDQVIST, EITEL.** Hymenoptera tenthredinoidea; with an appendix by Wolter Hellén. (In: Brinck, P. S. V., & K. G. Wingstrand. *Mountain fauna of Virihaure*, 1949-51. pt. 2, p. 69-72)

**Contains** a list of 28 species of sawflies found in Virihaure region of Lule Lappmark and a German description (by W. Hellén) of a new species, *Amauronematus carbonarius*, from the same region.

**Copy seen:** MH-Z.

**23897. LINDQVIST, EITEL.** Neue nordische Blattwespen. (Notulae entomologicae, 1948, pub. 1949. v. 28, no. 3-4, p. 65-86, illus.) **Title tr.:** New northern sawflies.

**Contains** diagnoses of 20 new species of sawflies from northern Scandinavia and Kola Peninsula, including 13 species from Kuusamo region and Swedish, Finnish and Russian Lapland; one of these species, *Pachynematus freyi* was also collected by Wuorentaus at Dudinka on the lower Yenisey River in western Siberia.

**Copy seen:** DLC; MH-Z.

**23898. LINDQVIST, EITEL.** [9 för vår fauna tidigare okända tenthredinidformer.] (Notulae entomologicae, 1939. v. 19, no. 1-2, p. 48) **Title tr.:** [Nine tenthredinid forms previously unknown in the fauna of Finland.]

**Contains** a report (without a formal title) recording nine forms of sawflies new to the hymenopterous fauna of Finland collected in the Kuusamo region and Finnish Lapland.

**Copy seen:** DLC; MH-Z.

**23899. LINDQVIST, EITEL.** Über alte und neue *Lygaeonematus*-Arten. (Hym., Tenthredinidae). (Notulae entomologicae, 1952. v. 32, no. 1-3, p. 80-119, illus.) **Title tr.:** On old and new species of *Lygaeonematus*.

**Contains** a critical revision of the sawflies of the genus *Lygaeonematus* with de-

scriptions of two new subgenera, *Lygaeotus* and *Lygaeophora*, and 37 species of which ten are described as new; includes 12 species native to northern Fennoscandia and two species from Kamchatka Peninsula. **Copy seen:** MH-Z.

**23900. LINDQVIST, EITEL.** Über Blattwespen der *Amauronematus*-Gruppe. (Notulae entomologicae, 1945. v. 25, no. 3, p. 102-108, illus.) **Title tr.:** On sawflies of *Amauronematus* group.

**Contains** a critical study of sawflies of *Amauronematus* group, including description of *A. saarineni* n. sp., native to Finnish Lapland, and *A. erectus* n. sp. inhabiting Finnish and Swedish Lapland and northwestern Siberia (Dudinka, lower Yenisey); also critical notes on *A. leucolaenus* known from Kuusamo, northern Finland and Sarek, northern Norway.

**Copy seen:** DLC; MH-Z.

**23901. LINDQVIST, EITEL.** Über die von Holmgren beschriebenen Nematinen (Hym. Tenth.). (Notulae entomologicae, 1944. v. 24, no. 1-2, p. 13-18) **Title tr.:** On Nematinae (Hym. Tenth.) described by Holmgren.

**Contains** a critical revision of 16 species (one from Spitsbergen (in 1869) and 16 from Novaya Zemlya) of the genus *Nematus* described by A. E. Holmgren, in his *Insecta a virus Doc. Nordenskiöld, 1883, (Arctic Bibliography, No. 7325)*; seven Holmgren species are recognized as valid by the author.

**Copy seen:** DLC; MH-Z.

**23902. LINDQVIST, EITEL.** Über einige hochnordische Nematinen (Hym. Tenth.). (Notulae entomologicae, 1944. v. 24, no. 1-2, p. 18-24) **Title tr.:** On some far northern Nematinae (Hym. Tenth.).

**Contains** critical notes on four species of sawflies of the genus *Amauronematus*, including two from Novaya Zemlya and northern Finland, and four species of the genus *Pteronidea*, including *P. parviserata* n. sp., native to Kuusamo and Finnish Lapland, *P. poppii* from Petsamo and Enontekiä Lappmark and *P. lienterica* from Kola Peninsula.

**Copy seen:** DLC; MH-Z.

**23903. LINDQVIST, EITEL.** Zur Kenntnis einiger *Amauronematus*-Arten (Hym. Tenth.). (Notulae entomologicae, 1940, pub. 1941. v. 20, no. 2-4, p. 56-71) **Title tr.:** A contribution to the knowl-

edge of some *Amauronematus* species (Hym. Tenth.).

**Contains** a critical revision of northern species of sawflies of the hymenopterous genus *Amauronematus*, mostly described from Lapland by R. E. Malaise in his *Beiträge z. Kenntniss schwedischen Blattwespen*, 1921, q. v., and from Kamchatka Peninsula in his *Entomologische Ergebnisse der schwedischen Kamtschatka-Expedition 1931*, (see *Arctic Bibliography*, No. 10801); with critical notes on 25 forms and data on their larvae, living on *Salix* species.

**Copy seen:** DLC; MH-Z.

**23904. LINDQVIST, EITEL.** Zur Kenntnis einiger finnischen Nematinen (Hym. Tenth.). (Notulae entomologicae, 1942. v. 22, nr. 3-4, p. 99-108) **Title tr.:** Contribution to the knowledge of some Finnish Nematinae. (Hym. Tenth.)

**Contains** a diagnosis of *Amauronematus piliserra* n. sp., a sawfly occurring in Solovetskiye Islands of the White Sea, and descriptive notes on *Lygaeonematus mollis albipes* n. ab. found in Finnish and Russian Lapland, and *L. mollis rufonotata* n. ab. from Finnish Lapland.

*sus* n. sp. aus Finland (Col.). (Notulae entomologicae, 1938, pub. 1939. v. 18, no. 4, p. 117-19, illus.) **Title tr.:** *Bradycellus ponderosus* from Finland (Col.)

**Contains** a diagnosis of *Bradycellus ponderosus* n. sp., found by the author near Paanajärvi, Kuusamo, northern Finland. **Copy seen:** DLC; MH-Z.

**23908. LINDROTH, CARL HILDEBRAND, 1905-** . Die Coleopterenfauna am See Pjeskejaure im schwedischen Lappland. (Arkiv för zoologi, 1936, pub. 1935. Bd. 28A, p. 1-60) **Title tr.:** Coleoptera fauna of Pjeskejaure Lake in Swedish Lapland.

**Contains** a general entomological description of the alpine region around Pjeskejaure (67° N.) and the adjacent mountainous districts, vertical subdivision, aquatic fauna, exotic element; a comparative table of distribution of 254 insects in six mountainous regions of Sweden (including Sarek and Torneträsk districts); and a systematic list of about 200 species of beetles native to Pjeskejaure and adjoining regions, with localities; bibliography (26 items).

**Copy seen:** DSI-M; MH-Z.

**23909. LINDROTH, CARL HILDEBRAND, 1905-** . Endemismus in der fennoskandischen Fauna, erläutert an der Fam. Carabidae. (Zoologiska bidrag från Uppsala, 1941. Bd. 20, p. 431-42, text map) **Title tr.:** Endemism in the fauna of Fennoscandia as demonstrated in the family Carabidae.

**Contains** a list of 23 species of ground beetles supposedly endemic in Fennoscandia, critical remarks and a review of them, with a discussion of the endemism in the fauna of that region. The author is of opinion that there is no one endemic species of Carabidae in Fennoscandia. At least seven of the species are native to northern regions.

**Contains** a critical revision of ground beetles (Carabidae) of Swedish Lapland (in the present-day limits of this region) described by Zetterstedt in his *Insecta lapponica*, 1840, q. v., with enumeration of 119 species, their modern interpretation and data on geographic distribution in Sweden; a list of 20 excluded species and a list of 115 ground beetles known from Swedish Lapland at the present time, including the Zetterstedt's species.

**Copy seen:** DA; MH-Z.

**23912. LINDROTH, CARL HILDEBRAND, 1905-** . Über fünf Coleopteren-Arten C. G. Thomsons der Gattungen *Amara* Bon., *Hylophilus* Berth. and *Ceuthorrhynchus* Germ. (Entomologisk tidskrift, 1932, Årg. 53, häft. 4, p. 205-232, illus.) **Title tr.:** On five Coleoptera species of C. G. Thomson in the genera *Amara* Bon., *Hylophilus* Berth. and *Ceuthorrhynchus* Germ.

**Contains** a critical taxonomic study of five type species of beetles, described by C. G. Thomson, with synonymy, critical notes and data on geographic distribution and host plants; includes *Ceuthorrhynchus granulicollis* native to Finnmark, Norway.

**Copy seen:** DA; MH-Z.

**23913. LINDROTH, CARL HILDEBRAND, 1905-** . Zur Systematik fennoskandischer Carabiden, 2-3. (Entomologisk tidskrift, 1939, Årg. 60, häft. 1-2, p. 54-68, illus.) **Title tr.:** A contribution to the systematics of Fennoscandian Carabidae, 2-3.

**Contains** (in pt. 2) a comparative study of two ground beetles *Nebria nivalis* and *N. gyllenhalii* native to Swedish Lapland and northern Norway, and review of six forms of these species distributed in northern Scandinavia, Kola Peninsula, northern Asia and North

America (Labrador); in pt. 3, a critical study of *Elaphrus tuberculatus* (*latipennis* J. Sahlb., *tumidiceps* Munster) from Pjeskejaure region, Swedish Lapland. Pt. 1 (1935) does not contain arctic material. **Copy seen:** DA; MH-Z.

**23914. LINDROTH, CARL HILDEBRAND, 1905-** . Zur Systematik fenno-skandischer Carabiden, 4-12, *Bembidion*-Studien. (Notulae entomologicae, 1939. v. 19, no. 1-2, p. 63-99, illus.) **Title tr.:** Contributions to the systematics of Fennoscandian Carabidae, 4-12, *Bembidion*.

Contains a taxonomic study of Fennoscandian species of the genus *Bembidion*, based mostly on the investigation of the reproductive organs, with data on subgenus *Chrysobracteon* (northern Fennoscandia, North America, Siberia) and 38 species (one new) of *Bembidion*, including many native to northern Scandinavia and Kola Peninsula; geographic distribution in European and Asiatic Russia is also given; bibliography (61 items). **Copy seen:** DLC; MH-Z.

**23915. LINDROTH, CARL HILDEBRAND, 1905-** . Zur Systematik fenno-skandischer Carabiden, 13-33. *Dyschirius*, *Bembidion*, *Trechus*, *Patrobus*, *Badister*, *Harpalus*, *Bradycellus*, *Trichocellus*, *Amara*, *Calathus*, *Agonum*. (Entomologisk tidskrift, 1943. Årg. 64, häft. 1-2, p. 1-68, illus.) **Title tr.:** Contributions to the systematics of Fennoscandian Carabidae, 13-33. *Dyschirius* [etc.].

Contains taxonomic notes on 33 Fennoscandian species of ground beetles (Carabidae) in 11 genera (as listed in the title) from various regions, including *Bembidion* (*Daniela*) *scandicum* n. sp. from Abisko, Torne Lappmark, and Karasjok (69°10' N.) Norway, and at least 6 other species from northern Scandinavia and Kola Peninsula; the distribution in other arctic regions, especially European and Asiatic Russia, is also given; bibliography (103 items). **Copy seen:** DA; MH-Z.

**23916. LINDROTH, HELMER, and LARS LINDGREN.** Metson hakomisen metsänhoidollisesta merkityksestä. (Suomen riista, 1950. no. 5, p. 60-81, illus., diagrs., maps) **Title tr.:** On the significance for forestry of the capercaillie, *Tetrao urogallus* L., feeding on pine-needles, etc.

A study of the habits of capercaillies (grouse) and their damage to pine trees

during the period of snow cover in various regions of Finland including the North, with data also on the snow cover. Summary in Swedish and English.

[(Notulae entomologicae, 1944. v. 24, no. 1-2, p. 44-64; 1944, pub. 1945, no. 3-4, p. 65-71, illus., plates 1-4) **Title tr.:** Observations on Finnish Lepidoptera, III. Muonio, Enontekiö (Lapponia Kemensis et Enontekiensis).

**Contains** the result of the study of the lepidopterous fauna of the Muonio region in Kemi Lappmark, and the Enontekiö region, Enontekis Lappmark, carried out in the summers of 1938, 1939 and 1942. Brief notes are given on the physical geography of regions explored and a list of about 180 forms of lepidoptera. Critical notes and descriptions of new aberrations are included. The latter are also described in German in a supplement (Abhang), including *Brenthis frigga* subsp. *lapponica* n. sp. and 12 new aberrations. For earlier parts of this work see the item above.

**Description** of 6 species taken by the author in Solovetskiye Islands. List of 20 additional species reported from the Solovetsk biological stations during 1892-98. Summary in French.

**Copy seen:** DLC.

**23927. LINKOLA, KAARLO, 1888-1942.** Alfred Oswald Kairamo. (Suomalainen tiedeakatemia, Helsingfors. (Academia scientiarum fennica). Sitzungsberichte, 1939, pub. 1943, p. 70-79)

**Contains** an obituary and appreciation of Kairamo (born Kihlman), 1858-1938.

Includes notes on his life, training, research in botany, especially forest ecology in Lapland, contributions to forest economy, political activities, work on tree acclimatization. *Copy seen:* DLC.

**23928. LINKOLA, KAARLO, 1888-1942.** Die Kartierung der Flora und Vegetation Finnlands. (Suomalainen tiedeakatemia, Helsingfors. Sitzungsberichte, 1938, pub. 1941, p. 72-89, maps) *Title tr.:* The mapping of the flora and vegetation of Finland.

Presentation of the various methods used in the preparation of floristic and vegetation maps of Finland, including northern areas. Remarks on similar work in other countries, and discussion of role of aerial photography in such mapping. *Copy seen:* DLC.

**23929. LINKOLA, KAARLO, 1888-1942.** Suunnitelma luonnonsuojelualueiden erottamiseksi Pohjois-Suomen valtionmailla. Helsinki, 1926. 57 p., 32 illus. on 9 plates, map. (Silva fennica: 1) *Title tr.:* Suggestions for the division of state-owned lands as nature-protection areas in northern Finland.

Contains data on the flora, fauna, and geology of the eight natural divisions (shown on map) and suggested measures for protection of flora and fauna. The role of the larger carnivorous animals in the forest is described. The organization of the areas as natural preserves is presented with consideration of their respective local factors: reindeer grazing, hunting, fishing, farming and logging, etc. Summary in German. *Copy seen:* DLC.

**23930. LINKOLA, KAARLO, 1888-1942.** Zur Kenntnis der Verteilung der Landwirtschaftlichen Siedlungen auf die Böden verschiedener Waldtypen in Finnland. Helsinki, 1922. 67 p., tables. (Acta forestalia fennica, 22:3) *Title tr.:* On the distribution of agricultural settlements on the soils of various forest-types in Finland.

Contains (in pt. A, p. 1-27) studies on the relation between the kind of agriculture and the soil of diverse forest-types in the region of Orimattila-Sysmä-Otava. Pt. B (p. 27-66) is an analysis of Finland's phytogeographic-agricultural areas (including the northern districts: Peräpohjola, Kuusamo, southern and northern Lapland), based on the types of forests and floristic considerations. *Copy seen:* DLC.

**23931. \*LINNANIEMI, WALTER MIKAEEL, 1876-** Beitrag zur Kenntnis der Collembolenfauna Spitzbergens. (Suomen hyönteistieteellinen aikakauskirja, 1935. 1:4, p. 137-41) *Title tr.:* Contribution to the knowledge of the Collembola fauna of Spitsbergen.

On the basis of a collection made by Prof. Richard Ebner in Aug. 1933, 13 species of springtails belonging to four families, are described, including one species new to Spitsbergen and three new varieties of which two were not previously described. Bibliography (10 items). *Copy seen:* DLC.

**23932. LINNAVUORI, RAUNO.** Tutkimuksia Suomen vesilude-eläimistöä. (Suomen hyönteistieteellinen aikakauskirja, 1950. 16, no. 2, p. 63-71, illus., sketch map) *Title tr.:* Investigations on the Finnish water-bug fauna.

On the basis of his own, also the Zoological Museum of Turku University's collection of water-bugs, author corrects several previous determinations of specimens, identifying one as *Sigara distincta* new to Finland; discusses distribution of *Callicorizia* species, including *C. wollastoni* in northern Finland, *C. producta* in the fell areas of Lapland, arctic and White Sea coasts and Russian Lapland, *Glaenocoris propinqua* on these coasts and inland (as indicated on sketch map). *Copy seen:* DLC.

**23933. LINSKAIA-VAL'ROND, N. A.** Materialy k étnografii gol'dov. (Sibirskaiâ zhivaiâ starina, 1925, vyp. 3-4, p. 145-60) *Title tr.:* Materials on ethnography of the Golds.

Contains material collected in 1917-18 in the basin of the Tunguska River (left tributary of Amur in the Khabarovsk area) on the sexual life of the native women, beliefs and customs concerning menses, pregnancy and childbirth. *Copy seen:* DSI.

**23934. LINSTOW, OTTO FRIEDRICH BERNHARD von, 1842-1916.** Entozoa des Zoologischen Museums der Kaiserlichen Akademie der Wissenschaften zu St. Petersburg, I. (Akademiiâ nauk SSSR. Izvestiâ, 1901. Ser. 5, t. 15, no. 3, p. 271-92, plates 1-2) *Title tr.:* Entozoa of the Zoological Museum of the Imperial Academy of Sciences at St. Petersburg, pt. I.

\*Previously known as W. M. Axelson, q. v., also *Arctic Bibliography*, No. 828.

*Contains a systematic list of about 100 entozoans, parasitic in mammals, birds and fishes, based on the collections from various regions, including those brought home by Russian Spitsbergen expedition of 1900, and by the Scientific-Economic Expedition to the Murman (Barents) Sea, 1898-1900. Diagnoses are given of 14 new species and many representatives of arctic fauna (Greenland, Barents, White Seas and Svalbard waters). For continuation see the author's Entozoa . . . II, 1903.* **Copy seen:** MH.

*Contains a systematic list of almost 150 entozoans or internal parasites of mammals, fishes, birds, etc., belonging to the Museum's collections, with descriptions of 14 new species, synonymy, critical notes and data on hosts and distribution; Includes some species native to the arctic regions of European and Asiatic Russia. Criticism and corrections were published by N. N. Kostylev in Notes regarding v. Linstow's paper, 1926, q. v.* **Copy seen:** MH-Z.

**23936. LINSTOW, OTTO FRIEDRICH BERNHARD von, 1842-1916.** Helminthen aus Ceylon und aus arktischen Breiten. (Zeitschrift für wissenschaftliche Zoologie, 1905. Bd. 82, p. 182-93, double plate) **Title tr.:** Parasitic worms from Ceylon and arctic latitudes.

*One of the ascarid worms herein described, Ascaris oculata Rud., came from the bearded seal, Phoca barbata, which occurs in arctic seas.* **Copy seen:** DLC.

**23937. LIPETS, R. S.** Byliny u promyslovogo naseleniia russkogo Severa XIX-nachala XX veka. (Akademii nauk SSSR. Institut étnografii. Trudy, 1951. Novaiia seriia, t. 13, p. 153-210) **Title tr.:** Epic poetry of the hunting population of the Russian North in the 19th and the beginning of 20th century.

*Contains a study of the byliny, i. e. folk tales and lore in verse, of the Russian settlers in the North. Following a dis-*

*cussion of the effects of the changed natural environment, new occupation, social conditions, etc., upon these traditional tales, the byliny are analyzed from the point of view of their mirroring the nature of the Arctic, showing something of navigation, hunting and fishing, farming and other occupations, women's work, building, tools and clothing, the ancient Russian town, etc. Bibliographical footnotes. Appended (p. 211-40) are texts of five of these byliny.* **Copy seen:** DLC.

**23938. LIPSHITS, B. A.** Étnograficheskie materialy po Severo-Zapadnoi Amerike v arkhive I. G. Voznesenskogo. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1950. t. 82, no. 4, p. 415-20) **Title tr.:** Ethnographical materials on northwestern America from the archives of I. V. Voznesenskii.

*The article describes the activities of Voznesenskii in Kamchatka, Alaska and adjacent regions (1839-49) in the fields of zoology, botany and ethnology; his diaries and manuscripts, ethnographical and geographical notes, and collection of ethnological specimens. Bibliographical footnotes.* **Copy seen:** DLC.

**23939. LIPSHITS, SERGEI IUL'EVICH, 1905-** K poznaniu flory i rastitel'nosti gor'achikh istochnikov Kamchatki. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1936. Otdel. biol. Novaiia seriia, t. 45, vyp. 2, p. 143-58, illus.) **Title tr.:** Contribution to the knowledge of the flora and vegetation of the hot springs of Kamchatka.

*Contains the results of the author's observations in 1935, on the peculiar flora and vegetation of the thermal springs of Kamchatka Peninsula, with a table of 38 species of flowering plants and vascular cryptogams growing around twelve springs and data on their total distribution; descriptive notes on some endemic plants, including Triglochin komarovii n. sp., data on thermophile plant associations, their peculiarities and elements. Summary in French.* **Copy seen:** DLC; MH-Z.

**23940. LIPSKAIA, N. A.** Kratki predvaritel'nyi otechet o komandirovke dlia étnograficheskogo izucheniia nanaev (gol'dov). (Sovetskaiia étnografiia. Sbornik :atel', 1940. t. 3, p. 250-56) **Title tr.:** A short preliminary report

on a mission for ethnographical study of the Golds.

*Contains* account of an expedition in 1936-37, organized by the Institute of Ethnography, Academy of Sciences, U.S.S.R., to the regions of Kur-Urmalsk, Nanalsk and Komsomol'sk. Anthropometric measurements and photographs were made of 659 Golds (also a few Tungus and Yakuts); 4000 pages of texts written down (including 800 pages of folklore), an ethnographical collection of about 600 objects brought home, etc. The report gives extensive notes on the names given to tribes by themselves and their neighbors; on settlement and demography, family organization, occupations and skills, traces of matriarchy, group marriage, system of relationship, patriarchal community, folklore and language.

**23949. LITTLEWOOD, C. A.** Gravity measurements on the Barnes Icecap, Baffin Island. (Arctic, July 1952. v. 5, p. 118-24 incl. tables, map, diagrs.)

"A survey was made [during the Baffin Island Expedition of the Arctic Institute of North America, 1950] of the southeastern lobe of the Barnes Icecap to determine ice thickness and topographical features of the underlying rock surface by means of the gravimeter method. Gravity was measured at stations along 7 traverses (45 mi.) with a Worden gravimeter no. 44 equipped with a high range reset mechanism and controlled by a dial calibrated in gravity units. The methods of calculation and the sources of errors are indicated. The measured surface elevations and the computed rock elevations and ice thicknesses for the traverses are shown diagrammatically, and tables present the principal facts for gravity stations. The greatest ice thickness indicated by the results is 1,533 ft. The greatest slope occurs where the rock elevation changes about 60 ft. in 0.75 mi. The floor of the icecap near the middle of the lobe averages about 100 ft. lower than near the margin."—SIPRE.

**23953. LITZENBERGER, S. C., and B. M. BENSIN.** Edda barley for Alaska. Palmer, Alaska, April 1951.

10 p. illus., tables (Alaska. Agricultural Experiment Station. Circular no. 16) published in cooperation with U. S. Dept. of Agriculture, Agricultural Research Administration)

Contains a report on a new variety of barley introduced from Sweden and submitted to trials in Alaska since 1946. Data are offered on its origin and characteristics, location and details of experiments; its agronomic performance, malting quality and feeding value. The new barley was found to be at least equal in feeding value to similar varieties grown in Alaska and because of other qualities is expected to gain an important place in the Territory.

**23969. LÖFQUIST, BERTIL.** Lifting force and bearing capacity of an ice sheet. Lyftkraft och bärförmåga hos ett istäcke. (Teknisk tidskrift, <74:761-[768] incl. illus., tables, graphs> Stockholm, 1944). Translated by H. A. G. Nathan. Ottawa, 1951. 27 p., illus., tables, graphs. (National Research Council of Canada. Technical translation TT164)

"Observations in Northern Sweden show the destructive effects of an ice sheet on construction. The lifting force and the bending strength of ice on a long straight wall are derived assuming a linear

temperature distribution, the coefficient of plasticity of ice, and a slowly rising water level. Ice deformations observed between level surveys agree well with those calculated for beams on elastic supports. An expression for the maximum lifting force is obtained as a function of the bending strength of ice. It is found to be largely independent of the modulus of elasticity of ice and its coefficient of plasticity. The lifting force is calculated for isolated cylindrical objects by introducing a low value for the modulus of elasticity. Calculations of the bearing capacity of ice are made for loads applied on a straight line and for loads spread over a circular area with a diameter equal to the thickness of the ice."—SIPRE. **Copy seen:** CaMAI (English translation); DLC (Swedish original).

**23977. LOEWE, FRITZ.** The amount of rime and snowdrift as factors in the mass balance of glaciers. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Bulletin, 1936, pub. 1938. no. 23, p. 415-21)

"Rime has some importance on the mass balance of glaciers, but it is difficult to measure. The author discusses in detail the conditions in air and in the upper layers of snow cover which result in rime formation. Heavy deposits of rime will be found in those regions where strong, damp winds, blowing from the sea against a mountain barrier, rise and undergo adiabatic cooling. These effects were observed in the mountains of Norway, in the coastal ranges of Alaska and especially in southern Patagonia. Another region favorable for rime deposits is the higher part of tropical mountains, where the heavy firn cover of many very steep mountain walls is usually formed by rime and not by falling snow. This type of deposit was found on the higher ridges of Kanchenjunga but not in the Alps. A review of the work done by many investigators on weather conditions (especially temperature and wind velocity) favorable for intensive rime formation is included."—*Meteorological abstracts and bibliography*, Oct. 1952. v. 3, no. 10, p. 1086. **23983. LOMEN, CARL JOYS, 1880- .** Reindeer can pack our larder full. (Forest and outdoors, 1946. v. 42, p. 165-66, illus.)

Author (for some years engaged in reindeer business in Alaska) notes conditions and factors necessary for developing reindeer herds as permanent livestock supply for northern Canada. He traces the introduction of reindeer into Alaska from Siberia (in 1892), growth of the herds, their commercial exploitation and later decline, due it is claimed to government interference. He recommends a series of measures to insure success of the industry in Canada, such as: incentives to herders and breeders; prevention of mixing of herds, care during fawning, introduction of new blood, shelter for personnel, preservation of grazing areas, etc. The reindeer census of Canada (summer 1944) showed 9000 (estimated) animals.

**Copy seen:** DA.

**23984. LOMEN, G. J.** Progress made with the reindeer. (American wildlife, July 1920. v. 9, no. 3, p. 2-4, illus.)

Paper presented at the Sixth National Game Conference, New York City, Mar. 1920. General facts on utility, habits, and development in Alaska of herds from imported stock; with many literary and ethnologic allusions to the reindeer of northern Europe and Asia.

**23985. LOMONOSOV, MIKHAIL VASIL'EVICH, 1711-1765.** Kratкое opisanie raznykh putesthestvii po Sĭvernym moriām, i pokazanie vozmozhnago prokhoda Sibirskim okeanom v Vostochnuĭ Indii. 1934. **Title tr.:** Short description of various voyages in northern seas and evidence of a practicable route through Siberian Ocean to the East Indies.

Written as a confidential paper for the Russian government in 1763, published, with two supplements, in 1847 (2 l., 150 p., copy in Ct. Y) and 1854, and republished in Lomonosov's *Sochineniia* (t. 7, 1934, p. 279-388, col. fold. map, copy in

DLC), also with extensive notes, comments and bibliography in V. A. Perevalov, *Lomonosov i Arktika*, 1949, q. v. The paper advocates the search of an arctic sea route to India, and it was instrumental in launching two attempts: (1) the Northwestern Sea Route Expedition under V. Ī. Chichagov, 1765-66, and (2) the Aleutian Islands and Alaska Expedition under P. K. Krenitsyn, 1764-71.

Contains in chap. 1, a short description of voyages in search of a Northwest Passage to India by Cabot, Frobisher, Davis, Hudson, Baffin, Ellis, Munk, de Fonte, and others; Chap. 2 describes explorations for a Northeast Passage by Barendsz, Riip, Fedot Alekseev, Dezhnev, Gerasim Akundinov, the members of the Great Northern Expedition, explorations of Russian merchants and Cossacks, and the alleged voyage across the arctic sea by the Portuguese David Melguer in 1660. Chap. 3 gives oceanographic and geophysical theories concerning the aurora borealis, and ice of the arctic sea, with the first classification of marine ice into: pack ("melkoe salo"), icebergs ("paduny"), and icefields ("stamukhi" and "lediane polia"), also a tentative estimate of the total mass of ice in the arctic sea. On the basis of statements (mostly erroneous) that sea water cannot freeze into solid ice and that arctic sea ice (drifting chiefly from east to west) is formed in rivers or coastal waters (mainly Siberian) and that the ice fields are completely melted during summer, the author concludes that solid ice cannot cover the entire arctic sea, and that its parts, remote from Siberia, especially between the North Pole and America, are navigable in summer. These views are supported by analogies in the formation and distribution of land and water, enabling conjectures to be made as to the geophysical features of unknown arctic areas. Author proposes two arctic routes between Europe and Kamchatka. Chap. 4 concerns preparation for the expedition and choice of vessel, crew, equipment and instruments. Chap. 5 is a draft of instructions for the commander and discussion of other measures connected with the expedition.

Supplement 1 (dated Mar. 1764) is an analysis of seamen's information about Spitsbergen and Novaya Zemlya, with conclusion that Spitsbergen is preferable as the starting point for an expedition.

Supplement 2 (dated Apr. 1764) anal-

yses information from Kamchatka seamen (Stepan Glotov and others) about the Aleutian Islands in connection with a planned expedition, and warns of competition from other nations. Map (fold. col.) of the Arctic Basin, shows the (alleged) route of D. Melguer, and routes of planned expeditions in both directions.

**24030. LUNDQUIST, ROY E.** Descriptive and quantitative classifications of various conditions persisting in snow and ice deposits. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 182-85)

A "suggested outline first proposed . . . 1942, to the U. S. Weather Bureau" for the purpose of providing "some form of standardization in the various programs relating to snow research and observation by both professional and lay observers." Types of snow and ice deposits are classified into fresh accumulations and old deposits. The snow structure is graded according to grain size. The degree of cohesion or compactness is represented by density compared to an equal volume of water at 4° C standard conditions. The quality definition shows presence of

meltwater. Author is a U. S. Weather Bureau hydrologist. **Copy seen:** DGS.

**24031. LUNDQVIST, ARNE.** Blattminennotize, mit Beschreibung von zwei neuen Agromyziden. (Opuscula entomologica, 1949. Bd. 14, häft. 3-4, p. 169-74, illus.) **Title tr.:** Notes on leaf miners with descriptions of two new species of Agromyzidae.

Contains a list of four species (two are new) of leaf miners new to the fauna of Sweden, another list of 42 species new to various provinces, including four found in Swedish Lapland and a diagnosis of *Phytomyza* n. sp. collected, in 1946 in Torne Lappmark (Sweden) on *Arnica alpina*. **Copy seen:** DA; MH-Z.

**24032. LUNDQVIST, GÖSTA, 1894-** . En pälsmyr sydost om Kebnekaise. (Geologiska foreningen, Stockholm. Förhandlingar, Mars-Apr. 1951. Bd. 73, p. 209-225, illus., diagrs.) **Title tr.:** A "palsa" marsh southeast of Kebnekaise.

Describes hummocks of frozen peat ("palsa"—Finnish term for frost mound or peat mound) permanently stratified with ice, observed in this district of northern Sweden. Two theories on the development of these mounds are discussed: (1) that of Kairamo, "that they are erosional residues from a coherent marsh area," and (2) that of Fries "the peat moss is raised by peat [which] soaked in from the sides, when thawing caused a reduction in pressure at the bottom of the palsa". The author holds that ice is formed between layers of peat where capillary action sucks water into dry peat from wet marsh. Results of pollen analysis comprise most of the paper. The distribution of the hummocks is in areas above the 120 day-10°C isotherm. Bibliography (11 items). Summary in English.

**Copy seen:** DGS; DLC.

**24033. LUNDSTRÖM, ERIK.** Beobachtungen und Studien bei den in den Jahren 1912-13 ausgeführten Pflanzenbestimmungen in Botanischen Garten Bergielund (Hortus botanicus Bergianus). Stockholm, I. Marcus' boktr., 1914. 121 p., illus., plates 1-2. (Acta horti Bergiani. t. 5, no. 3) **Title tr.:** Observations and studies of the plants carried out in 1912-13 in the Bergielund Botanical Garden (Hortus botanicus Bergianus).

Contains the results of the study of about 70 decorative plants cultivated in

the open at the Bergielund Botanical Garden, with Latin descriptions of three species, eight varieties and forms and ten hybrids new to science; synonymy, critical notes, illustrations, and data on cultivation and geographic distribution are given. Includes some species native to northern Scandinavia, Kola Peninsula, northern Siberia, Kamchatka, Labrador and Ellesmere Land.

**24045. LUTZ, H. J.** The concentration of certain chemical elements in the soils of Alaskan archaeological sites. (American journal of science, Dec. 1951. v. 249, p. 925-28)

Notes the higher phosphorus, nitrogen, potassium and calcium content of soils from old village sites on Kenai Peninsula and just northwest of Juneau in southeast Alaska, and briefly discusses vegetation differences resulting from such fertility as archeologic markers. Bibliography (9 items). **Copy seen:** DGS; DSI-M.

**24046. LUTZ, H. J.** Damage to trees by black bears in Alaska. (Journal of forestry, July 1951. v. 49, p. 522-23, illus.)

Damage noted at base of trees on Kenai Peninsula as done by *Euarctos americanus perniger*; reference to serious damage recorded in forestry literature of the Pacific Northwest, and some remarks on why bears strip the bark. Bibliography (3 items). **Copy seen:** DA; DLC.

**24047. LUTZ, H. J.** Occurrence of clefts in the wood of living white spruce in Alaska. (Journal of forestry, Feb. 1952. v. 50, no. 2, p. 99-102, illus.)

Notes on investigations made in the summer of 1949 on the white spruce, *Picea glauca*, in Kenai Peninsula and Matanuska valley, Alaska. The clefts are attributed to the unbalance between loss and replenishment of water. The injury occurs in the outermost annual ring during the dormant period. The structure of wood and rate of growth are claimed to be additional contributory factors. "Frozen ground prevents, and low soil temperature and poor aeration restrict water absorption by tree roots. Water lost by transpiration cannot be replenished while the soil is frozen or very cold and an unbalance exists. The collapsed wood does not recover when subjected to boiling or steaming and presents a serious defect in trees to be used for lumber."—SIPRE. Bibliography (7 items). **Copy seen:** DA; DLC.

**24048. LUYET, B. J.** The resistance of living matter to very low temperatures. (In: American Institute of Physics. Temperature, its measurement and control in science and industry. New York,

Reinhold Pub. Corp., 1941. p. 425-27)

Contains an account of experiments in vitrification (rapid freezing without ice-crystal formation) and devitrification of unicellular algae, *Paramecia*, *Myxamoebae*, spermatozoa, onion epidermis, moss leaves and muscle fibres. The results varied. The significance of the experiments are discussed.

**Copy seen:** DLC.

**24049. LUYET, B. J.** Survival of cells, tissues and organisms after ultra-rapid freezing. London, Institute of Biology, 1951. 24 p. reprinted from *Freezing and drying*.

Contains an account of rapid freezing and rewarming (vitrification and devitrification) of muscle tissues, embryonic chick heart, erythrocytes, frog spermatozoa, moss leaves, "eel" worms, etc., partly dehydrated. The results varied, according to the object, from a few minutes' to permanent survival. The account is preceded by an examination of the physical principles of vitrification and followed by remarks on problems of technique. Bibliography (about 50 items).

**24061. LYTKIN, VASILIJ.** Zur Datierung der syrjänisch-russischen Lehnbeziehungen. Helsinki, 1928. 24 p. map. (Suomalais-ugrilainen seura. Aikakauskirja, v. 42, no. 4) **Title tr.:** On the dating of Zyryan-Russian loan (word) relations.

Contains linguistic investigation of two sounds *a* in *t'al'*, and *s* or *z*, in Zyryan words of Russian origin, borrowed before the 15-16th centuries. These two cases are illustrated by 53 and 20 Russian loan-words respectively. The Zyryans came in contact with Russians in the territory around the rivers Vyehogda, Mezen', Luza, and Pechora as early as the 11th century. In the 14th century the Zyryans were baptized into the Orthodox Church and came definitely under the rule of Moscow. During almost a thousand years of close relations, the Zyryans took over many words from the Russian language, which likewise absorbed Zyryan expressions. Map shows the recent limits of the Zyryan population.

"Reconnaissance flights during March and April 1948 disclosed that Hudson Bay was almost completely ice-bound. Large areas of open water were observed from May 3 to May 6. The weather records indicated above-normal temperatures over the area of open water from April 25 to May 3. A high correlation was found between late spring temperatures and date of ice clearance at Churchill Harbour from 1928 to 1948. It was concluded that the early thawing of ice on the Bay was caused by above-normal spring temperatures."—SIPRE.

**24090. McKINLEY, CHARLES,** and others. Case for limited modification of cabotage to facilitate economical integration of Canadian and United States railroad and steamship transportation in the North Pacific. Portland, Ore., 1944. 2 p. l., 28 p. incl. tables. (North Pacific Planning Project. North Pacific Study. [No. 10]) mimeographed.

*Other authors:* J. C. Rettie, G. Sundborg, and S. Mirick.

Discussion (mainly) of exceptions to the enforcement of the policy of "cabotage" (restriction of the coasting trade to U. S. citizens), and history of the issue in relation to railroads. Concluding section shows how Alaskan trade suffers from "cabotage"; how shipping costs could be lowered appreciably by use of the Prince Rupert shipping route and Canadian railroads. Tabular data is

given on differentials in shipping costs from the Midwest and the East to Alaska via Prince Rupert as against the Seattle route. **Copy seen:** DI.

**24091. MCKINLEY, CHARLES, and others.** United States-Canadian post-war civil aviation relationships in the North Pacific. Portland, Ore., 1944. p. l., 48 p. incl. tables. (North Pacific Planning Project. North Pacific study. [No. 6]) mimeographed.

**Other authors:** J. C. Rettie and G. Sundborg.

Discussion and data (based on figures for 1939-41) on nature and volume of potential air traffic to and from Alaska (and eastern Asia); prospective competition, possible alternatives to uneconomic competition, maintenance and operation of the airway (needs and costs), and air routes. *Appendix* gives estimate of potential air passenger traffic between Alaska and the United States, 1945-49. **Copy seen:** DI.

**24094. McLACHLAN, ROBERT, 1837-1904.** Bemerkungen über europäische Phryganiden, nebst Beschreibung einiger neuer Genera und Species. (Stettiner entomologische Zeitung, 1867. Bd. 28, no. 1-3, p. 50-63) **Title tr.:** Notes on some European Phryganidae with descriptions of some new genera and species.

*Contains* Latin diagnoses of seven new species of caddis flies of the fam. Phryganeidae, including *Apatania frigida* n. sp., native to Alten in Norwegian Lapland, and to Great Slave Lake in Northwest Territories, with critical notes on some other species. **Copy seen:** MH-Z

**24095. McLACHLAN, ROBERT, 1837-1904.** Report on the Insecta (including Arachnida) collected by Captain Feilden and Mr. Hart between the parallels of 78° and 83° north latitude, during the recent Arctic Expedition. (Linnean Society, London. Journal; Zoology, 1879. v. 14, p. 98-122)

*Contains* introductory notes on circumstances of collecting on northern Ellesmere Island, and the unusual climatic conditions endured by the insects there; followed by annotated lists, with localities of 5 species of Hymenoptera, one beetle, 13 species of butterflies, about 15 species of flies, one Hemiptera, 7 bird lice, 3 springtails, 6 spiders and about 9 species of mites. The collections were made by the British Arctic Expedition under Nares which reached Robeson Channel and Lincoln Sea, wintering at Floeberg Beach 82°25' N. 62° W., and exploring the northern coast of Ellesmere as far west as Cape Alfred Ernest, 82°15' N. 86° W.

An abstract of this paper was published as Appendix no. 6, in Sir G. S. Nares'

*Narrative of a voyage to the polar sea during 1875-6, etc., pub. 1878 (see Arctic Bibliography, No. 12026A). Copy seen: DLC.*

**McLAREN, DIGBY JOHNS, 1919-**, see Harker, P., & D. J. McLaren. *Sciophyllum*, Canadian Arctic. 1950. No. 22428.

**24096. MACLEAN, J. H.** Marine navigation in the Canadian Arctic. Montreal (?) 1951. 7 l. mimeographed.

Contains text of an address presented to the Canadian Institute of Navigation in Montreal, May 29, 1951. Following a brief historical introduction, author sketches methods and aids to marine navigation in normal latitudes, then points out differences in navigating arctic waters: limited hydrographic data, lack of charts; absence of shore-based aids, incomplete sailing directions, uselessness of the magnetic compass, and dependence on gyro compass; limitations on astronomical observations; ice as a factor. Methods and aids in the Arctic; practice in the Arctic is described; use of soundings, importance of radar.

**24097. MACLURE, KENNETH C.** Air navigation in high latitudes. (Arctic, Dec. 1950. v. 3, p. 192-93)

Brief account of recent experience of U. S. Air Force and Royal Canadian Air Force weather reconnaissance flights to the North Pole, supplementing the basic paper of A. J. Haggard, *Air navigation in high latitudes*, 1950, q. v., based on the *Aries* flights in May 1945. MacLure reports here on: (1) the use of the 180th meridian as reference line, rather than the Greenwich meridian, for grid directions, (2) the use of Pfund sky compass to help overcome hazard of long twilight, and (3) the building of experience with radar returns from land and water.

**24098. MacMILLAN, MIRIAM (LOOK).** Far North with "Captain Mac." (National geographic magazine, Oct. 1951. v. 100, p. 465-513, incl. 28 p. of illus., map)

Popular account of the MacMillan Arctic Expedition in the *Bowdoin*, summer 1950, which coasted the Labrador to Cape Chidley, crossed Davis Strait to West Greenland, sailed northward into

Kane Basin, (where pack ice stopped the ship about 79° N. lat.), then returned along the west side of Baffin Bay-Davis Strait. Author reminisces on the numerous (28) earlier trips of her husband, D. B. MacMillan, describes the scenery and historic landmarks along the route and remarks on the Eskimos of Labrador, West and Northwest Greenland, and (in particular) on the MacMillan-Moravian School at Nain.

*Copy seen: DLC.*

**24099. MacMILLAN, WILLIAM.** A forty million dollar crop. (Forest and outdoors, Aug. 1948. v. 44, no. 8, p. 6-7, illus.)

The author states that the U. S. Government realized \$40,000,000 from the Pribilof Islands seal herd between 1912, when it took over control, and 1945. During this period the herd grew from 125,000 to 3,600,000 head. A brief description is given of this seal (*Otoca alascanus*), its fur, migrations, "harems", and commercial utilization.

*Copy seen: DA.*

**24100. MacMILLAN, WILLIAM.** Is the sea-otter coming back? (Forest and outdoors, July 1949. v. 45, no. 6, p. 18-19, 22, illus.)

Contains a history of the gradual decimation of this most valuable fur animal which occurs from the Bering Sea to California; protective measures of the U. S. A. and lack of such measures in Canada; indifference of the fur industry; description of the sea-otter, its food, reproduction, young. An appeal to save the animal from extinction closes the article.

*Copy seen: DA.*

**24101. MacMILLAN, WILLIAM.** Phantom giants of the far North. (Forest and outdoors, 1944. v. 40, p. 253-54, illus.)

Author stresses polar exploration, especially by airplane, as having revealed much about the polar bear. He offers data on: the size and weight of the animal, hibernation of the female, reproduction, swimming, resistance to cold (fur with air-spaces, oil glands and a fat layer under the skin); some anatomical peculiarities and its life in captivity.

*Copy seen: DA.*

**24102. MacMILLAN, WILLIAM.** The wolverine is going, going. (Forest and outdoors, Sept. 1949. v. 45, no. 9, p. 13, 26, illus.)

Contains information about the near-

ing extinction of this animal; its relationship with the weasels; its appearance, fur, habits and man's attitude, prejudices, etc., towards this species.

*Copy seen:* DA.

**24103. McMILLION, SHELBY A.** The strategic route to Alaska. (Military engineer, Nov. 1942. v. 34, p. 546-53, illus., 2 maps)

Notes on history of proposals for an Alaska highway, progress on an international plan, the alternative routes and final decision, construction and supply problems, and the direction and personnel involved in building the Alaska Highway.

*Copy seen:* DLC.

**24104. McMINIMY, DONALD J.** Preliminary report on tuberculosis incidence in Alaska. (Alaska's health 1947. v. 5, no. 10, p. 4-5, table)

Report based on an x-ray survey of over 15,000 people, made during 1946 and first half of 1947 with the aid of the motor ship *Hygiene*, a mobile-truck unit and a portable photo-roentgen outfit. The methods applied are given and the results tabulated according to stage of disease and race (White, Indian, Aleut, Eskimo). An analysis and discussion of the findings follows. *Copy seen:* DSG.

**24105. MacNEISH, RICHARD S.** An archaeological reconnaissance in the Northwest Territories. (Canada. National Museum. Bulletin 123, its Annual report for 1949-50, pub. 1951, p. 24-41, 8 plates incl. map, table)

Contains results of a summer 1949 trip to discover the culture complexes and their sequences in Great Bear, Great Slave Lakes, Mackenzie River, and Lake Athabasca environs. The itinerary (9000 miles) is outlined, sites (40) characterized, and the collected material analyzed. The specimens, (225 artifacts) mainly surface finds, indicate the existence of four cultural complexes in the general area, the oldest (perhaps 7000 years) the youngest extending almost to historic time. Excavations in the Mackenzie drainage and eastward are called for.

Knowledge of the area at present is too scant for application to problem of immigration of man and diffusion of culture from Asia into America.

**24121. MAKAROV, STEPAN OSIPOVICH, 1848-1904.** S. O. Makarov i zavoevanie Arktiki. "Ermak" vo l'dakh. Materialy i dokumenty o S. O. Makarove i ledokole "Ermak". [Sostavitel' sbornika D. A. Levonevskii] Leningrad, Izd-vo Glavsevmorputi, 1943. 332 p., illus., ports., map. **Title tr.:** S. O. Makarov and the conquest of the Arctic. The *Ermak* in the ice fields. Materials and documents on S. O. Makarov and ice-breaker *Ermak* [D. A. Levonevskii, editor].

*Contains* a selection of Admiral Makarov's works along with papers by the editor and others on his life and achievements in the following parts (titles translated and contents indicated):

1. Levonevskii, D. A., S. O. Makarov as an arctic explorer, p. 5-39. Biographical sketch stressing Makarov's achievements in arctic exploration; project to build a great ice-breaker supported by S. Ŭ. Vitte and D. I. Mendeleev; construction of the *Ermak*; its first successful tests in the Baltic Sea (spring 1899); plans for an arctic expedition; D. I. Mendeleev's refusal to participate; first and second arctic trips of the *Ermak* under command of S. O. Makarov in 1899 and in 1901, its failure to navigate through ice-covered arctic seas; removal of S. O. Makarov from command and transfer of the *Ermak* to service in the Baltic Sea.

2. Makarov, S. O. The *Ermak* in the ice fields, p. 41-162. Abridged reprint of Makarov's book "*Ermak*" vo l'dakh, 1901 (*see Arctic Bibliography*, No. 10759).

In the first part, chapter 2 by F. F. Vrangeli is omitted, also some technical details; from the second part only two articles by Makarov are reprinted, all articles by other authors are omitted.

3. Makarov, S. O. Navigation of the *Ermak* to Novaya Zemlya and Franz Josef Land in 1901, p. 163-86. Unpublished and unfinished account of the second arctic trip of the *Ermak* under Makarov's command; the tasks of expedition; its preparation, equipment, personnel; encounter with the ice of Barents Sea; the *Ermak* caught in the ice fields faces wintering in the Arctic; liberation and short trip to Novaya Zemlya (Krestovaya Guba); suggestions for some improvements in the construction of ice-breaker.

4. Makarov, S. O. Hydrographic photogrammetric surveying of the coasts of Novaya Zemlya, p. 183-86. Description of the survey work in the region of Krestovaya Guba, carried out during the second arctic trip of the *Ermak*, Aug. 22-29, 1901, using photogrammetric methods, with some technical remarks on instruments and method of work.

5. Veber, V. N. Diary, p. 187-92. Daily notes of the geologist of the second arctic trip of the *Ermak*, dated July 3-Aug. 30, 1901; describing the main events in this period, and supplementing the paper of S. O. Makarov.

6. Neupokoev, V. K. Notes on the study of marine ice, p. 193-97. Notes on the marine ice of Barents Sea along the route of the *Ermak* during its second arctic trip, July 6-Aug. 22, 1901; characteristics of the ice-fields, torosses, and icebergs met on the trip.

7. Makarov, S. O. Influence of ice-breakers on naval war operations, p. 198-202. Lecture delivered Dec. 4, 1899, before the Society Promoting War Sciences, stressing the importance of ice-breakers for naval offensive and defensive operations, especially in the Baltic Sea; the general part of the lecture, included in the paper "*Ermak*" *vo l'dakh*, is omitted here.

8. Materials and documents on S. O. Makarov and the ice-breaker *Ermak*, in two parts:

Levonevskii, D. A. Chronological survey, p. 205-317. Collection of documents and extracts or summaries of books, articles, letters, reports, memoranda and surveys concerning the origin of the idea, construction, equipment, voyages and achievements of the

*Ermak*, arranged in chronological order for each year 1897-1940; a summary of the *Ermak's* 40-year service (p. 315) shows not less than 3000 ships convoyed through ice.

Levonevskii, D. A. Bibliography, p. 318-28. Lists of publications of S. O. Makarov (49 items), also articles, etc., concerning Makarov or the *Ermak* (203 items) and survey of materials in archives.

Reviewed by A. F. Laktionov in *Problemy Arktiki* 1944, pub. 1945, no. 2, p. 123-26 (copy in DGS).

**24126. MAKSIMOV, I. V.** K opredeleniû porâdkovoi velichiny godovogo stoka vod Tikhogo okeana v Severnyi Ledovityi okean cherez Beringov proliv. (Problemy Arktiki, 1944, pub. 1945, no. 2, p. 51-58, tables, diagrs. sketch maps) **Title tr.:** On the determination of the relative volume of the annual flow of Pacific waters to the Arctic Ocean through Bering Strait.

On the basis of observations of more than 70 stations, working at various times during 1925-39 and at various points in Bering Strait, the author estimates the annual mass of water flowing from Pacific into the Arctic Basin as being 25 times less than that of the Gulf Stream. **Copy seen:** DGS.

**24127. MAKSIMOV, I. V.** O perspektivakh ispol'zovaniâ dannykh po prilivotlivnym kolebaniâm urovniâ moriâ dlia otsenki srednei ledovitosti morei Severnogo morskogo puti. (Problemy Arktiki, 1944, pub. 1945, no. 1, p. 56-63, diagr., map) **Title tr.:** On the prospects of using the data of tidal changes of the sea-level for estimating the average ice conditions in the seas of the Northern Sea Route.

The tidal waves of the arctic sea, moving from north to south, suffer deformation by the ice in the seas off the Asiatic coast, hence the changes in the

structure of these waves may be regarded as an indicator of ice conditions (ice masses) in these seas. This statement is illustrated by observations of tidal waves in Tiksi Bay in relation to ice conditions of Laptev Sea, and the author establishes principles of "ice-tides reconnaissance," p. 61. **Copy seen:** DGS.

*Contains* data on the ice-caves in the various regions of the U.S.S.R., including some in northern European Russia and Siberia (Yakut A.S.S.R.); discussion on methods of the ice classification based mostly on structure. "Cave ice may be divided into four classes: atmogenic, hydrogenous, anthropogenic and heterogenic. Atmogenic or sublimation ice is found in all caves. The crystals vary in configuration and form on the walls of the cave. The salinity of atmogenic ice ranges from 0.1 to 5.0 per cent. Hydrogenous ice usually forms as stalactites and stalagmites. Heterogenic cave ice refers to surface ice which may fill caves and tunnels. Anthropogenic ice is man-made and forms on the walls of cold storage caves. The distribution of caves in which the various types of ice were observed is discussed."—SIPRE. Bibliography (90 items).

**24146. MALMIO, BRUNO.** Über die Feuchtigkeit der Luft in Finnland während der Periode 1898-1907. Helsinki, 1914. 59 p., 7 plates (5 maps, 2 diagrs.), tables. (Suomalainen tiedeakatemia. Annales Academiae scientiarum fennicae, A5:7) **Title tr.:** On the humidity of the air in Finland during the period 1898-1907.

Contains report based on observations made at 41 stations located 59°-69° N. in Norway, Sweden, Finland and Russia, including five (Sodankylä, Inari, Sydva-ranger, Teriberka and Kola) north of the Arctic Circle. Data on distribution in January and July, annual means, distribution, annual course, deviations from monthly means and extreme values of annual means are given.

**Copy seen:** DLC.

**24147. MALOV, FED.** Novoe na Enisee. (Vokrug sveta, Oct. 1952. no. 10, p. 46-51, illus) **Title tr.:** New develop-ments on the Yenisey.

Contains an account of the advances in fruit growing, apiculture and fisheries in the subarctic and several arctic localities in the Yenisey valley. Apples and several kinds of berries grown at the experimental station of Yarfsevo (60° N.) are claimed to have been pushed north along the lower Yenisey and its tributaries to Igarka and even to Medvezhiy Ostrov, opposite Igarka. Bees, introduced primarily for pollination are claimed to have produced small amounts of honey as far north as the Taymyr tundra. In fresh-water fisheries, air transport becomes of great value for the development of isolated or hitherto inaccessible areas.

**24156. MANKER, ERNST MAURITZ, 1893-** . The study of preservation of the ancient Lapp culture: Sweden's contribution since 1939. (Man, 1947. v. 47, p. 98-100)

During the war period, Swedish investigation of Lapp culture was more intensive than ever before. A body of some 50 informants, representative of all Lapp communities was attached to the Lapp Department of Nordiska Museet in Stockholm, of which the author is curator. Questionnaires concerning both the material side of Lapp culture and certain traits on the social and psychological side were sent to those informants, and results were obtained above all expectation. A study of language and folklore has been started under supervision of Prof. B. Collinder, an expedition, equipped with recording machines, visiting market centers and other localities, has recorded much of the Lappish folklore. A Lapp open-air museum at Tärnaby is expected to be completed in 1947. New Lapp collections have been organized at the museums in Gothenburg and Umeå, and new publications *Acta Lapponica* and others launched. In many quarters the Lapps have kept their ancient culture almost intact, though in most cases they are eager to try out the modern improvements from "outside." It is now quite normal for a Lapp family to have a fixed dwelling, a farm consisting of modern buildings where part of the family lives all the year round, while only the actual reindeer-herders, properly equipped, follow the herds. **Copy seen:** DLC; InU.

**24157. MANKER, ERNST MAURITZ, 1893-** . Swedish contributions to Lapp ethnography. (Royal anthropological Institute of Great Britain and Ireland. Journal, 1952. v. 82, pt. 1, p. 39-54, map on plate)

Contains review of research done in the 17th and 18th centuries; outline of the debate since mid-19th century, on the origin of the Lapps. The extensive investigations of material culture: domestication of reindeer, dwellings, sleds and skis are summarized. Study of social and spiritual culture (less extensive) is outlined and current work noted. An extensive bibliography of research papers

is appended. Map shows the pasture areas of Lapp communities.

**24158. MANNERMAA, K. H.,** Suomen-maan korkeussuhteet. (Terra, 1915. 27, p. 39-66, plate, illus., tables) **Title tr.:** Elevations in Finland.

*Contains* data on places in northern Finland (among other localities) where accurate altitude mapping had been done by 1914, and on methods used.

**Copy seen:** DLC.

**24159. MANNINEN, ILMARI, 1894-1935.** Die dämonischen Krankheiten im finnischen Volksglauben; vergleichende volksmedizinische Untersuchung. Helsinki, Suomalainen tiedeakatemia, 1922. 253 p. (Folklore Fellows, communications no. 45) **Title tr.:** The demonic diseases in Finnish folk beliefs; a comparative study in folk medicine.

*Contains* analysis of the folk beliefs relating to disease chiefly among the recent Finns with, however, many comparative references to the similar attitudes and practices among the Lapps, Ostyaks, Voguls, Zyryans and Indo-European peoples. Diseases, according to these folk beliefs, can be caused by the dead, by spirits living in the earth, forest and water; by the wind and fire; by the spirits living in the household and bathhouse; by the special disease demons which cause the pests, smallpox and undulant fever; by the demonic possession and bewitching. Such agents are also considered responsible for unexplained swellings and red flush, the stroke and lumbago. Peculiar popular ideas concerning infection are noted and a strong prevailing belief that to find out the origin of a disease means often to heal it.

**24160. MANNINEN, ILMARI, 1894-1935.** Die nord-eurasischen Torsions-fallen. (Eurasia septentrionalis antiqua, 1931. v. 6, p. 1-14, 20 illus.) **Title tr.:** The North-Eurasian torsion-traps.

*Contains* description of Uralo-Siberian traps of this type found among the Samoyeds, Tungus, Zyryans, Chukchis, with references to Eskimos and Ob-Ugrians.

**Copy seen:** DLC.

**24161. MANNINEN, ILMARI, 1894-1935.** Über die Moxibustion in der Volksmedizin der Nordvölker. (Suomalais-ugrilainen seura. Toimituksia, 1933. no. 67, p. 256-66, 5 illus.) **Title tr.:**

On moxibustion in the popular medicine of northern peoples.

*Contains* account of this therapy practiced against all kinds of pains by burning of a piece of dried birch fungus close to the ailing spot as a counter-irritant. The painful practice once had a wide dissemination, from China and Japan to Europe, and is still in use among the northern Eurasian peoples, especially popular with the Russian Lapps.

**Copy seen:** DLC; InU.

**24162. MANNINEN, ILMARI, 1894-1935.** Überreste der Sammlerstufe und die Notnahrung aus dem Pflanzenreich bei den nordeurasischen, vorzugsweise den finnischen Völkern. (Eurasia septentrionalis antiqua, 1931, v. 6, p. 30-48) **Title tr.:** Survivals of the gathering-stage economy and the plants used for food in emergency among the northern Eurasian, particularly Finnish peoples.

*Contains* essay on wild plants used as food especially at times of starvation among the Finns, Chukchis (23 kind of plants), Lapps, Zyryans, and Voguls. Use of herbs, roots, tree bark, and berries, their names and preparation are described; the stomach contents of slain reindeer or squirrel are shown to be regarded as delicacies. These primitive peoples have long recognized non-poisonous plants and discovered those most fit for eating.

**24163. MANNING, THOMAS HENRY, 1911- , and A. H. MacPHERSON.** Birds of the east James Bay coast between Long Point and Cape Jones. (Canadian field-naturalist, Jan.-Feb. 1952. v. 66, p. 1-35, 4 plates, sketch map)

*Contains* field notes and some data on population densities, of over 100 species of birds, observed during June-Sept. 1950.

**Copy seen:** DGS.

**24164. MANNING, THOMAS HENRY, 1911- .** Birds of the west James Bay and southern Hudson Bay coasts. Ottawa 1952. 2 p. 1, 114 p. incl. 7 plates, fold. map. (Canada. National Museum. Bulletin 125; Biological series 43)

*Contains* report on birds seen and collected (incidentally to other work) by author and party along these coasts in 1947 and near the Moose River estuary in 1949; with addition of records (published and unpublished) for the coast from Moose Factory to Nelson

River and inland 15 miles. Field notes are given on about 250 species and subspecies observed in the coastal, barrens, deciduous scrub, and spruce areas: numbers seen and collected are noted, habitats described, and records from museum files and published literature included. Bibliography (about 150 items). **Copy seen:** CaMAI; DGS.

**24165. MANNING, THOMAS HENRY, 1911-** . Eskimo stone houses in Foxe Basin. (Arctic, Aug. 1950. v. 3, p. 108-112, illus., map)

Notes on dwellings, tent rings, etc., seen by the author (or excavated) during the period 1938-49, on Foxe and Melville Peninsulas, the Baffin Island shores between Hantzsch River and Piling Bay, and in the Igloolik region. These remains appear to be of early 19th century origin, some of them older. Bibliography (7 items). **Copy seen:** DAI; DLC.

**24166. MANNING, THOMAS HENRY, 1911-** . A mixed Cape Dorset - Thule site on Smith Island, East Hudson Bay. (Canada. National Museum. Bulletin 123, its Annual report for 1949-50, pub. 1951, p. 64-71, illus.)

Contains notes on 12 Eskimo stone house ruins investigated (partly excavated during a day's sojourn on this small island) during the Canadian Geographic Bureau expedition on the *Nauja*, summer 1949. Specimens (harpoon heads, and other implements and ornaments of antler, stone, etc.) are described, illustrated, and correlated with previous finds. They are of Cape Dorset and Thule types and "it seems probable that some Cape Dorset traits survived in this region . . . into Thule times." **Copy seen:** DLC.

**24167. MANNING, THOMAS HENRY, 1911-** , and D. F. COATES. Notes on the birds of some James Bay islands. (Canada. National Museum. Bulletin 126, its Annual report for 1950-51, pub. 1952, illus., map)

Contains notes, arranged in systematic order, on birds collected in 1947 and 1949 on 11 barren and near-barren islands of central James Bay (ca. 53° N., 80° W.). The account is preceded by a description of the islands visited, their soil, flora, and times spent on them. The notes include some data on nests and nesting, morphology, etc. Bibliography (10 items). **Copy seen:** CaMAI.

**24168. MANNING, THOMAS HENRY, 1911-** . Remarks on the tides and driftwood strand lines along the east coast of James Bay. (Arctic, Sept. 1951. v. 4, p. 122-30, illus., map, diag.)

Contains notes and observations on tides and driftwood strand lines made incidentally to other work during a canoe trip (Moosonee to Long Island) in summer 1950, the measurements being taken at irregular intervals and only in the daytime. Reference is made, and eyewitness accounts are quoted regarding the unusually high tide of October 1949, the highest in the memory of the James Bay residents. This is supplemented by observations on the driftwood strand lines of the locality. Bibliography (8 items). **Copy seen:** DLC.

**24169. MANNING, THOMAS HENRY, 1911-** , and R. W. RAE. Tidal observations in arctic waters; notes. (Arctic, Aug. 1950. v. 3, p. 95-104, illus., map)

Manning's notes on tides along the southern Hudson Bay and western James Bay coasts are those made by him in 1947 while canoeing from Moosonee to York Factory and around Akimiski Island; tidal observations at Resolute Bay on Cornwallis Island, July-Aug. 1949, and at Isachsen (78°47' N., 103°32' W.) Aug. 31-Sept. 6, 1949 were made by R. W. Rae; editorial note supplements the Resolute Bay observations by mentioning measurements made in 1850-51 at Assistance Bay on Cornwallis Island during a Franklin search voyage and reported by P. C. Sutherland (in his *Journal of a voyage*, 1852). **Copy seen:** DAI; DLC.

**24170. MANNING, THOMAS HENRY, 1911-** . The varying lemming in captivity in Ottawa. (Arctic circular, Feb.-Mar. 1950. v. 3, p. 20-21)

Notes on several shipments of *Dicrostonyx groenlandicus* from various localities in northern Canada, and their breeding, eating and mortality records in captivity. Bibliography: (2 items).

**Copy seen:** CaMAI.

**24172. MANTEIFEL, B. P.** K biologii krylonogogo mollŭska *Clione limacina* Phipps. (Moskovskoe obschestvo ispytatelei prirody. Bŭlleten', 1937. Otdel. biol. Novaiā seriā, t. 46, vyp. 1, p. 25-35) **Title tr.:** On the biology of *Clione limacina* Phipps.

Contains a study of the biology of a marine mollusc, *Clione limacina*, widely distributed in the Barents Sea and considered a stenothermic form adapted to fixed temperature. Tabular data are offered to show its ability to stand great fluctuations of temperature. Summary in English. **Copy seen:** DLC; MH-Z.

**24173. MANTEIFEL', B. P.** Plankton odnol iz gub v zapadnoi chasti Murmansko poberezh'ia. (In: Sbornik N. M. Knipovicha, 1939, p. 87-98, diagr.) **Title tr.:** The plankton of one of the bays on the western part of the Murman coast.

Contains the results of the author's study of the plankton of some small inlets and harbors in the Motovski and Kola Bay regions. The explored localities are characterized, their phyto- and zooplankton divided into four seasonal-ecological groups; data are presented on fluctuation in the abundance of planktonic biomass in this typical coastal zone. Summary in English.

**24174. MANVILLE, IRA A., and E. B. CHASE.** The influence of nutritionally produced anemia on the ability of experimental animals to withstand low temperatures. (American journal of physiology, Mar. 1937. v. 118, p. 549-61)

Contains a study on rats made anemic by a diet deficient in vitamin-B complex. A loss of weight preceded the drop in body temperature, characteristic of this deficiency; coincident with the drop in

body temperature, there was a decrease of the number of erythrocytes and amount of hemoglobin followed by anhydremia; the latter is explained as being due to a shift of water from the blood to the tissues, and caused by cold. With the increase of the severity of the anemia the resistance to low temperatures decreased. Bibliography (15 items).

**24176. MARCHAND, JOHN F.** Tribal epidemics in the Yukon. (American Medical Association. Journal, 1943. v. 123, p. 1019-1020)

Indian villagers at Teslin Lake, speaking the Tlingit language, had little outside contact since the 1896 gold rush. In 1942 construction of a highway began nearby and the contact with an urban population brought soon an outbreak of measles (affecting 121 out of 130 Indian villagers) and was followed by dysentery. In 1943 jaundice, German measles, mumps, tonsillitis and meningococcic meningitis followed; with 3 fatalities from measles, 4 from meningitis.

**24184. MARKOV, SERGEĬ.** Letopis' Aljaski. [Izd. 2.] Moscow-Leningrad, Izd-vo Glavsevmorputi, 1948. 220 p., illus., ports., maps (part fold.) *Title tr.:* Annals of Alaska.

*Contains* a (somewhat exalted) narrative of the Russian occupation, colonization and administration of Alaska based on ten years' work on Russian archival

sources. The account centers on explorers and pioneers, beginning with the 18th century and continuing to the exploits of Soviet airmen, but dealing mainly with the period from Bering's voyages to the end of the Russian régime in 1867. It gives descriptions of expeditions and their course, the lands discovered, their animals, plants and natural resources; native peoples and their ways of life, etc.; the fur trade and the Russian American Co. The book is fully illustrated and (geographically) indexed. In addition a briefly annotated list of about 400 Russian travelers and explorers of Alaska, government and public figures mentioned in the text is appended.

**24187. MARR, N. IÄ.** Suomi-karel'skie i somekh-kartskie äzyki; predvaritel'nyi otechet. (Akademiä nauk SSSR. Doklady, Seriä B, 1929, no. 2, p. 29-33) **Title tr.:** The Suomo-Karelian and Somech-Kartvelian languages; a preliminary report.

Contains linguistic discussion in which the Finno-Karelian languages are compared with the Grusian (a Georgian) language and the so-called sibilant group of the Armenian, from a purely formal point of view, as standing at the same stage in the evolution of language. The Karelian language has preserved the phonetic sibilant peculiarities better than Finnish. The author used three Karelian soldiers as native speakers for his investigation.

**Copy seen:** DLC.

**24188. MARSCHALEK, OTTO.** Österreichische Forscher, ein Beitrag zur Völker- und Länderkunde; mit einem Geleitwort von Martin Gusinde. Wien, Druck und Verlag St. Gabriel, [1949]. 172 p., parts., 2 fold maps. **Title tr.:** Austrian explorers, a contribution to ethnology and geography; with an introduction by Martin Gusinde.

Contains an account of Austrian exploration told in the form of biographies of explorers and narratives of their exploits. A brief historical review is followed by accounts of travelers for trading and colonizing companies; missionary organizations and those of the royal family and research institutions (p. 1-66). The remainder of the work is organized according to geographical areas and includes a chapter on the Arctic (67-82). The latter begins with C. L. Giesecke (1761-1833) and his mineralogical journey in Greenland, 1806-1813, and includes sketches of the life and exploits of: Weyprecht and Payer, Wegener and several others.

**Copy seen:** DLC.

**24189. MARSH, DONALD B.,** Bishop of the Arctic. Life in a snowhouse. (Natural history, Feb. 1951. v. 60, p. 64-67, illus.)

Brief text to accompany photographs showing winter life of Caribou Eskimos of the Padlemiut tribe.

**Copy seen:** DGS; DSI-M.

**24190. MARSH, DONALD B.,** *Bishop of the Arctic.* White whales in the Arctic. (Canadian geographical journal, July 1950. v. 41, p. 34-40, illus.)

The author describes hunting with Eskimos for beluga in Beaufort Sea, noting the Eskimos' preparation and use of the flesh, organs, skins, etc., of the whale. **Copy seen:** DGS; DLC.

**MARSH, G. H.,** *see* Laughlin, W. S., & G. H. Marsh. New view history Aleutians. 1951. No. 23685.

**24191. MARSH, GORDON, and M. SWADESH.** Kleinschmidt centennial V: Eskimo Aleut correspondences. (International journal of American linguistics, 1951. v. 17, no. 4, p. 209-216)

Contains linguistic study, listing 140 comparisons for which the authors were able to reconstruct the Proto Eskimo-Aleut form. The authors have little doubt of the common origin of the both languages, although the specific vocabulary correspondences are not too easy to find; this indicates that Eskimo and Aleut have been diverging for a long time. **Copy seen:** DLC.

**24192. MARSHAK, M. E.** Fiziologicheskie osnovy zakalivaniia organizma. (Sem'ia i shkola, Sept. 1952. v. 7, no. 9, p. 32-33) **Title tr.:** Physiological basis of hardening the organism.

Contains an article on the importance of developing resistance to cold for general health; the effects of local cooling on remote regions of the body and the way this is effected; thermal regulation of the nervous system; ways of acquiring cold resistance, etc. **Copy seen:** DLC.

**24193. MARSHALL, A. J.** Non-breeding among arctic birds. (Ibis, 1952. v. 94, no. 2, p. 310-33, plate 1)

Contains results of a study, carried out by the author on Jan Mayen. Data are given on the environmental conditions and his observations on various species of casual visitors, passerines, migratory waders and sea birds and laboratory examination of gonads of both breeders and non-breeders. The conclusion is that non-breeding in sexually mature birds may be caused variously, by lack of safe nest-sites due to fox persecution, lack of breeding cover and food shortage, the cause differing from species to species. **Copy seen:** MH-Z.

**MARSHALL, R. J.,** *see* Greenfield, A. D. M., & others. Heat loss from toes in cold water. 1951. No. 22204.

**24194. MARTI, IŪ.** Promyslovaia razvedka ryby. Moskva, Pishchepromizdat, 1948. 139 p., illus. **Title tr.:** Commercial reconnaissance of fishes.

Following an outline of physical, chemical and biological factors, which determine the abundance of fish and formation of shoals, the author analyses the distribution, shapes, direction and other general characteristics of the shoals. This is followed by a description of reconnaissance methods (biological, echometric, from airplanes, etc.) and organization; preparation of charts and prognoses. A separate section deals with individual species of commercial fish and mammals, including such arctic forms as seals, cod, haddock, Murman herring, crabs, etc. Bibliography (about 80 items). **Copy seen:** DLC.

**24195. MARTIN, FREDERICKA I.** Three years of Pribilof progress. (American Indian, Spring 1950. v. 5, no. 3, p. 17-26)

Author outlines the "feudalistic paternalism" under which, she states, the Aleuts of the seal islands lived previous to their wartime evacuation in 1942; notes change in administrative policy 1946-47, improvements in education and health facilities, nutrition, civil rights of the Pribilof Islanders; then discusses in detail the wage scale and employee rights of sealers in government service on the Islands, and closes with a critical review of the U. S. Dept. of the Interior, Pribilof Islands Survey Group reports, 1949, q. v.

Following this paper (p. 26-29) is an abstract of the Pribilof Islands Survey Group's Observations and recommendations. **Copy seen:** DLC.

**24196. MARTIN, FREDERICKA I.** Wanted, a Pribilof bill of rights. (American Indian, Fall, 1946. v. 3, no. 4, p. 15-25)

Critical discussion of social and economic rights of the (roughly) 500 Aleuts of the Pribilof Islands, administered (since 1941) by U. S. Fish and Wildlife Service, and of these natives' treatment as non-citizen wards of the government; inequities of their year-round wages: cash for work in the brief sealing season, rations and social services for maintenance work. Need for improved educational and health facilities, and for

recognition of Aleuts' rights as American citizens in voting and in managing community affairs, etc. Based in part on the author's observations while resident on the Islands 1941-42, as wife of U. S. Public Health doctor.

**24198. MARTIN, JEAN, and A. JOSET.** Sondages sismiques. (In: Victor, P.-É., and others. Rapport préliminaire de la campagne au Groenland 1949, pub. 1950, p. 44-58, diags.) **Title tr.:** Seismic soundings.

"Sounding studies of the Greenland ice cap, the form of the covered ground, the underground water level and the mechanical properties of firn, ice, and bed rock are reported and the equipment used is listed. The research site was located at 1800 m. alt. Installation of the equipment is described and the working plan outlined. Charges from 50-500 gm. were used for reflections and charges below 10 kg. for refractions. Experiments with different charge dispositions resulted in the use of a long-distance device for the registration of reflected waves. The distance between the explosion and the seismograph at which the reflected longitudinal waves are received before the Rayleigh waves is derived from an equation. Results obtained with the refraction and reflection methods are described and compared. It is concluded that the seismic soundings were successful, but further research is required to explain the ground roll, investigate the weak-velocity layer, and determine wave velocity variations as affected by depth."—SIPRE. **Copy seen:** CaMAI.

**24199. MARTIN, P. R.** Vulkanische Aktivität kein Klima-Faktor! (Naturwissenschaftlicher Verein für Schleswig-Holstein. Schriften, 1951. Bd. 25, p.

50-57) **Title tr.:** Volcanic activity is not a climatic factor.

Author discusses long range meteorologic effects from major volcanic eruptions (including Katmai, Kamchatka) for which there are records; and gives his opinion that no strong weather or climatic effects may be claimed. Bibliography (12 items). **Copy seen:** DGS.

**24200. MARTIN, PAUL F.** Surface features of the Matanuska valley, Alaska. [Abstract]. (Association of American Geographers. Annals, 1942. v. 32, p. 127-28)

Sketch of bed rock geology and of the "primary or reworked glacial deposits, with minor features due to wind action" which account for practically all of the surface features of the valley today.

**Copy seen:** DGS; DLC.

**24201. MARTIN, PAUL SIDNEY.** 1899- , and others, Indians before Columbus; twenty thousand years of North American History revealed by archeology. Chicago, Ill., University of Chicago Press, [c1947]. xxiii, 582 p., incl. front., illus., tables. **Other authors:** G. I. Quimley and D. Collier.

"A contribution of the Chicago Natural History Museum. This book has been written for the interested layman and for students taking introductory courses in anthropology." It includes (in chap. 30) a précis of the archeology of the Northwest Coast Indians (Haida, Tlingit and others) and in chap. 31-33 (p. 473-509), that of "Northwestern" (Okvik, Old Bering Sea, Ipiutak, etc.), "Southwestern" (Early, Middle and Late Aleut, etc.) and "Eastern" (Dorset, Thule, and Inugsuk) Eskimo areas.

"The heat-loss rate of the human body in northern Manchuria at temperatures of -20° to -30° C. was measured with an alcohol Kata-thermometer. The heat-loss rate is expressed empirically in terms of temperature and wind. The physiological reactions to frostbite are described. Acclimatization to cold and resistance to frostbite are effective when the numerical

product of temperature and wind velocity is low, but becomes ineffective when the number exceeds a critical value. Death from cold exposure is discussed, and some dietetic relationships are reviewed. Ten minutes of vigorous exercise daily in the open without clothing are recommended practices to increase cold endurance."—Abstract by Ukitirô Nakaya for SIPRE. Bibliography (7 items).

"The durability and stability of structures erected upon permafrost are discussed in relation to the temperature, heaving of frozen ground, and action of external forces. It is observed that freezing ground expands even at a temperature of -17.0° C. The swelling due to crystallization exerts a force of up to 21.8 kg./sq. cm. in loamy soils, with a moisture content of 19.1 percent, at tem-

peratures about  $-3.1^{\circ}$  C. Studies of permafrost conditions prior to construction should include the determination of the depth of the active layer, thermal regime of the permafrost, physical characteristics of the soils, the extent of ground ice, the hydrology of the surrounding area, the type of natural cover, and climatic factors. Some types of buildings can be erected without disturbing the permafrost table by using pile foundations, or by anchoring insulated foundations in the permafrost."—SIPRE.

Contains a study on two species of adult frogs exposed to cold air ( $0^{\circ}$  to  $-5.5^{\circ}$  C.); the course of rectal temperature, heartbeat, breathing, movements of body and limbs, and ice formation in various organs were investigated. Bibliography (14 items). **Copy seen:** DLC.

**24230. MAT'SKO, S. N., and A. T. ZHMEĬDO.** Protseess l'doobrazovaniia i osobennosti krivoi temperatury tela pri zamerzanii pozvonochnykh zhivotnykh. (Zoologicheskii zhurnal, 1949. t. 28, vyp. 3, p. 269-76, tables) **Title tr.:** The process of ice formation and features of the body temperature curve of vertebrates during freezing.

Contains a report on experiments with adult frogs exposed to cold air of  $-3.5^{\circ}$  to  $-5.5^{\circ}$  C. Ice appeared first in the eyes, then in the muscle of the extremities, in the body cavity, on the brain and in the heart; through-freezing of the brain and of the blood in the heart marks the final phase. The body temperature curve and its relation to ice formation in the organism are discussed. Bibliography (17 items). **Copy seen:** DLC.

**24231. MAT'SKO, S. N., and A. T. ZHMEĬDO.** Vliianie, okazyvaemoe nekotorymi veshchestvami na protseess zamerzaniia i na vosstanovlenie zhiznennykh funktsii u podvergnutykh zamorazhivaniu pozvonochnykh zhivotnykh. (Akademiia nauk SSSR. Doklady, novaiia seriia, 1949. t. 69, no. 5, p. 703-706, fig., table) **Title tr.:** The influence exerted by certain substances upon the process of freezing and upon the restitution of vital functions in vertebrate animals subjected to freezing.

Contains a study on male frogs injected with 40 per cent alcohol, exposed to air temperatures of  $-4^{\circ}$  to  $-6^{\circ}$  C. and rewarmed in water of  $20^{\circ}$  C. In the experi-

mental animals, the amount of water frozen in the body at a temperature of  $-1.5^{\circ}\text{C}$ . was  $2\frac{1}{2}$  - 8 times smaller than in controls. The lag in ice formation was made pronounced in the alcohol-treated animals than in partly desiccated ones used for comparison. Bibliography (7 items). **Copy seen:** DLC.

**24232. MATŠKO, S. N.** Vosstanovlenie zhiznennykh funktsii u podvergnutykh zamorazhivaniū pozvonochnykh zhivotnykh v zavisimosti ot soderzhaniā v tele vody. (Akademiā nauk SSSR. Doklady, novaia seriā 1948. t. 59, no. 2, p. 401-404, 2 fig., table) **Title tr.:** Restoration of vital functions of frozen vertebrates, depending on the water content of their bodies.

Contains a report on experiments with several species of partly dehydrated (ca. 30 per cent) frogs; a decrease in the initial freezing temperature, and a sharper expression of the fall of body temperature during supercooling were observed; freezing in the dehydrated frogs was quicker and they withstood the most intense freezing. Bibliography (8 items). **Copy seen:** DLC.

**24233. MATŠKO, S. N., and others.** Vosstanovlenie zhiznennykh funktsii u podvergnutykh zamorazhivaniū pozvonochnykh zhivotnykh v zavisimosti ot stepeni zamerzaniā i tempa otogrevaniā. (Akademiā nauk SSSR. Doklady, novaia seriā, 1948. t. 59, no. 4, p. 817-20, 2 fig., 2 tables) **Title tr.:** Restitution of vital functions of vertebrates subjected to freezing and its dependence on the degree of freezing and the speed of thawing.

Other authors: A. T. Zhmeldo and V. M. Selivanova.

Contains a study on adult, male frogs exposed to temperatures of  $0^{\circ}$  to  $-1^{\circ}\text{C}$ . Data on the degree of freezing of various organs, length of life, etc., are given. When animals were cooled down to  $-0.6^{\circ}\text{C}$ , the speed of re-warming had no effect on restitution of vital functions; with cooling down to  $-0.9^{\circ}\text{C}$ , the degree of restitution of vital functions was much lower when re-warming was slow. Bibliography (4 items). **Copy seen:** DLC.

**24234. MATŠKO, S. N., and V. M. SELIVANOVA.** Vosstanovlenie zhiznennykh funktsii v zavisimosti ot vremeni ikh ischeznoveniā u podvergnutykh zamorazhivaniū pozvonochnykh zhivotnykh. (Akademiā nauk SSSR. Doklady, Novaia

seriā, 1949. t. 69, no. 3, p. 469-72, table) **Title tr.:** Restoration of vital functions dependent on the period of their disappearance in vertebrates exposed to freezing.

Contains an account of experiments with male frogs cooled with air of a minimal temperature of  $-6^{\circ}\text{C}$ . and re-warmed with water of  $20^{\circ}\text{C}$ . Stoppage of heartbeat for  $1\frac{1}{2}$  - 2 hours was followed with irreversible vital changes; some animals, partly frozen for many hours had their vital functions restored. During mild freezing (at an air temperature not lower than  $-1.2^{\circ}\text{C}$ ) heartbeat persisted up to 20 hours, much longer than in cases of freezing at  $-4^{\circ}$  to  $-6^{\circ}\text{C}$ . Bibliography (3 items). **Copy seen:** DLC.

**24235. MATSON, G. ALBIN, and H. G. ROBERTS.** Distribution of the blood groups, M-N and RH types among Eskimos of the Kuskokwim basin in western Alaska. (American journal of physical anthropology, 1949. (n. s.) v. 7, p. 109-122, tables)

Contains data on the area investigated; materials and methods; summary; conclusions: of 341 putatively full-blooded Eskimos, 36.95 percent were found to belong to group O, 44.87 percent to group A, 11.73 percent to B, and 6.45 percent to AB. Subgroup  $A_2$  is absent, as among Blackfoot Indians, Hawaiians and other "primitive and isolated" races. The difference between the Eskimos examined and the Alaska whites is not great as far as distribution of blood groups is concerned. With regard to M-N factors 47.80 percent belonged to type M, 41.64 to MN and 10.56 percent to N. There were no Rh negative (ede) bloods found among 315 specimens examined, in agreement with the situation among primitive people generally. The distribution of Rh sub-groups, though not clear, are in agreement with the distribution of these types among Mexican and Ute Indians. Bibliography (38 items). **Copy seen:** DSG.

**24236. MATTHES, FRANÇOIS ÉMILE, 1874-1948, and A. D. BELMONT.** The glacial anticyclone theory examined in the light of recent meteorological data from Greenland—Part 2. (American Geophysical Union. Transactions, Apr. 1950. v. 31, p. 174-82, illus.)

"Evidence collected before his death by Matthes (in the form of notes), edited and arranged by Belmont, shows that although cyclones are frequently diverted

by Greenland to the west or east, they occasionally cross the icecap both in summer and winter. Records made at Eismitte (1930-31) by the Germans, and by two British expeditions (1930-1931 and 1934) across the icecap, indicate that bad weather occurs over half of the time, and that the sequence of events (cloud, wind, precipitation, temperature) is not appreciably different from that which occurs elsewhere when cyclones pass. The outflowing of cold air which Hobbs cites as proof of a glacial anticyclone is only a very thin skin of cold air and prevents (rather than proves) the formation of an anticyclone. Other arguments presented to refute Hobbs' theory: passage of deep cyclones over other and higher mountain masses, depth of snow falling on ice cap many times greater than would occur from anticyclonic alimentionation of ice crystals."—*Meteorological abstracts and bibliography*, Aug. 1950. v. 1, no. 8, p. 496-97.

**24238. MATTHEWS, WILLIAM KLESMANN, 1901-** . Languages of the U.S.S.R. Cambridge [Eng.], University Press, 1951. ix, 178 p., 5 maps, 13 diagrs.

*Contains* a short and comprehensive review of languages spoken in the Soviet Union, divided into six large groups: Paleoasiatic, Uralic, Altaic, North Cau-

casian, South Caucasian and Indoeuro-pean. The first two of these groups include the languages of peoples native to the European Russian and Siberian North. Not considered, however, are those languages, of which the homeland lies outside the borders of the U.S.S.R., despite their wide dissemination in that country. Controversies on the relationship of different linguistic groups are not dealt with in any detail, but existing theories are stressed briefly. Tabular statistics are given for each people. Extensive bibliography is appended. This work is reviewed by A. Burgmann in *Anthropos, Ephemeris*, 1952, Bd. 47, no. 3-4, p. 691. **Copy seen:** MH.

**24239. MATTICK, FRITZ.** Die Flechte *Tholurna dissimilis* in Nordamerika? (Svensk botanisk tidskrift, 1950. Bd. 44, häfte 2, p. 473) **Title tr.:** The lichen *Tholurna dissimilis* in North America?

*Contains* a report of the author on finding in 1939, a specimen of *Tholurna dissimilis* with a Labrador label in the Herbarium of Botanical Museum in Berlin. The specimen was destroyed during the war; the same lichen was reported recently to be in the Herbarium in Geneva, Switzerland, marked as native to North America.

**Copy seen:** DSI-M; MH-A.

**24240. MATTICK, FRITZ.** Die Flechten Spitzbergens. (Polarforschung, 1949, pub. 1950. Bd. 2, Jahrg. 19, p. 261-73) **Title tr.:** The lichens of Spitsbergen.

On the basis of a study of available literature and his own observations on the north and west coasts of West Spitsbergen, 1938 (his collections were destroyed), the author traces the lichenological research in Svalbard from 1773 to 1940; then discusses the history of post-glacial dispersion and present-day distribution of lichens, indicates the families represented on Svalbard, discusses their relation to climate, underlying rock and biotic factors, the lichen associations and topographic considerations. Bibliography (30 items).

**Copy seen:** DGS.

**24241. MATTICK, FRITZ.** Das Problem der bipolaren Flechten. (Polarforschung, 1950, pub. 1951. Bd. 2, Jahrg. 20, p. 341-45) **Title tr.:** The problem of the bipolar lichens.

Discussion of plant migration, current paleobotanical and paleogeologic theories

which might explain (specifically) the existence at both poles of certain species of lichens, but generally the whole problem of bipolarity. Bibliography (12 items). **Copy seen:** DGS.

**24242. MATVEEVA, T. A.** *Biologičeskaja Mytilus edulis* L. Vostochnogo Murmana. (Akademicheskaja nauka SSSR. Murmanskaja biologicheskaja stantsija. Dal'niye Zelen'sy. Trudy, 1948. t. 1, p. 215-41, illus., map) **Title tr.:** The biology of *Mytilus edulis* L. of the eastern Murman.

Studies on the biology of this common and widespread sea-mussel led to the conclusion that its biomass occupies the first place, exceeding many times that of other common species. Population densities on various substrates are given, together with age analyses. Reproduction rates are quoted in relation to age (size) and to annual weather variations. The seasonal growth-rate is studied and analyzed. Bibliography (25 items).

**Copy seen:** DLC.

**24243. MATVEEVA, T. A.** Sezonnyye izmeneniya litoral'nogo naseleniya na kamenistoi fashii v gube Dal'ne-Zelen'skoi. (Akademicheskaja nauka SSSR. Murmanskaja biologicheskaja stantsija. Dal'niye Zelen'sy. Trudy, 1948. t. 1, p. 123-45, tables) **Title tr.:** Seasonal changes of the littoral population on the rocky grounds in Dal'niye Zelen'sy Bay.

Following an outline of the local climate, six different levels of the bios are analyzed; the seasonal fluctuation is demonstrated by quantitative analyses of the plants and animals in February, May, August and November; qualitative aspects and the problem of distribution are included. Bibliography (12 items).

**24244. MAUPERTUIS, PIERRE LOUIS MOREAU de, 1698-1759.** La figure de la terre, déterminée par les observations de Messieurs de Maupertuis, Clairaut, Camus, Le Monnier . . . & de M. l'abbé Outhier . . . accompagnés de M. Celsius . . . faites par ordre du Roy au cercle polaire, par M. de Maupertuis. Paris, Imprimerie Royale, 1738. xxiv, [4], 184 p., ix fold. plates (diags.) map. **Title tr.:** The shape of the earth, determined

by the observations of M. de Maupertuis, Clairaut, Camus, Le Monnier and Abbé Outhier, accompanied by M. Celsius, made by order of the King, at the Arctic Circle.

Preface (p. iii-xxiv) is resumé of the historic controversy on, and practical importance of the shape of the earth; the problem of determining to what extent this spheroid is flattened at the poles; the sending of two French expeditions one to the Equator and the other to the Arctic Circle to make meridian and gravity measurements. Preface is followed (p. 1-78) by de Maupertuis' lecture before the French Academy of Sciences, Nov. 13, 1737, on the measuring of the meridian degree at the Arctic Circle. It includes a brief account of the French scientists' expedition June 1736-June 1737 to the Torneå region of northern Sweden and (in detail) their work. Appended (p. 79-152) are their observational data and calculations. Finally (p. 153-84) author summarizes results of their pendulum measurements at Pello 66°48' N. (noting effect of temperature on instruments).

This work was recently noted by G. Schindler in his *Polarforschung von Mehr als 200 Jahren*, 1950, q. v.

**24259. MEDICAL RESEARCH COUNCIL (Great Britain).** Vitamin-C requirement of human adults, experimental study of vitamin-C deprivation in man; a preliminary report by the Vitamin C Subcommittee of the Accessory Food Factors Committee, Medical Research Council. (Lancet, June 5, 1948. v. 254, p. 853-58)

Contains a study on volunteers (19 men and one woman) aged 21-34, conducted for 15 months. The experimental group was deprived of vitamin C and given graded doses of it when signs of deficiency appeared; the controls had supplements of the vitamin given from the start, in addition to the basal diet containing about 1 mg. vitamin C, taken by both groups. First symptoms appeared in the 18th week and were followed by others, affecting all or only some individuals, and are presented in detail together with supplementary observations, tests, etc. Vitamin C content of blood and plasma and other blood examinations in the various control groups are also presented. Studies on healing of experimental wounds, were also conducted on all groups. The "minimal protective dose" against scurvy under the conditions of the experiment, including protection against abnormal wound healing, was about 10 mg. daily. However, this should not be considered as optimal dose. Bibliography (over 20 items).

**24276. MELANDER, G.** Is it possible to study directly the nature of the auroral rays? Helsinki, 1931. 5 p. (Suomalainen tiedeakatemia. Annales Academiae scientiarum fennicae, A33:12)

Author suggests new method of investigating nature and effects of auroral

rays, e. g. to test if they are of same nature as cathode rays by sending aloft "a little piece of very sensitive photographic film . . . enclosed in a small and light-proof wooden film holder which would be fixed to a balloon sonde of great dimensions. A piece of . . . platinum in front of the film holder could be the solid exposed to the cathode rays which emanate Röntgen rays."

**24281. MELDGAARD, JÖRGEN.** The Paleo-Eskimo culture of west Greenland. (American antiquity. Jan. 1952. v. 17, no. 3, p. 222–30, illus.)

Contains a description of 182 stone artifacts, collected in 1948 by Hans Mosegaard at Sarqaq, Ritenbenk District, Disko Bay. The artifacts include blades, burins, scrapers, lamps, etc. An analytical review of the finds suggests important differences from the Dorset culture and close similarity with types found in Alaska. The Sarqaq material probably represents an Eskimo culture "closely related to the earliest Eskimo cultures in Alaska, which appeared in West Greenland after wanderings without lengthy stops;" the relative position, with regard to other Eskimo cultures is also discussed. Bibliography (21 items).

**24289. MENARD, HENRY W., and R. S. DIETZ.** Submarine geology of the Gulf of Alaska. (Geological Society of America. Bulletin, Oct. 1951. v. 62, p. 1263-85, illus., incl. 5 charts, diagrs., 2 plates (diagrs.), fold. chart)

Authors distinguish two topographic provinces in 35 submarine mountains of the gulf: (1) volcanoes with flat tops produced by wave action near sea level, and (2) long low ridges of irregular shapes and relating to Pliocene-Pleistocene orogenic belt, thought to be orogenic mountains. Suggest that eastern Aleut-

ian Trench originated in early Tertiary time, and that its unusual V-shaped profile probably indicates a deep filling of sediment; also that "an earlier trench, now filled with sediment, existed in Mesozoic time at the present site of Kodiak Island and the Kenai Peninsula. Bibliography (31 items).

**24326. MIETTINEN, LEEVI.** Tutkimuksia harmaalepiköiden kasvusta. Helsinki, 1932. 100 p., incl. 2 illus. plates, map, tables, diagrs. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 18:1) **Title tr.:** A study of the growth of gray alder.

Contains data on gray alder (growing to 70°30' N. lat.), its appearance and development in Finland, its distribution, growth, production; amount of alder trees, length, diameter at breast height, and volume of dominant alders and of alder in general. Bibliography (50 items). **Copy seen:** DLC.

**24327. MIGAI, K. V.** Spetsodezhda dlia zashchity cheloveka ot nizkikh temperatur vozdukh. (Gigiena i sanitariā. June 1952. no. 6, p. 23-29, diagrs., table) **Title tr.:** Special clothing for protecting man from low air temperatures.

Contains a study of work clothes made of certain kinds of fur and of clothes padded with cotton-wool. Only sheepskins gave better protection than the latter. Experiments with net-like jerseys worn directly on the body showed the eye-size and thickness of the "net" to be the decisive factors, the kind of material having no effect. Such full length jerseys closed at the neck, wrists and ankles, and made of cotton 3-3.5 mm. thick, with meshes 10 x 10 mm., were almost as efficient as cotton-padded clothes, and were more comfortable, permeable to perspiration, etc.

**Copy seen:** DLC.

**24328. MIKHAILOV, A. F.** Zhertvo-prinoshenie u Khristian; prazdnovanie dnia sv. Frola i Lavra v der. Kochakh Ukseevskoi volosti, Cherdinskago u. (Kazan' Universitet. Obschestvo arkhologii, istorii i étnografii. Izvestiā, 1898. t. 14, vyp. 4, p. 441-44) **Title tr.:** Offering among the Christians; celebra-

tion of St. Frola and Lavra's day in the village of Koch, Ukseevsk county, Cherdinsk district [gov. of Perm].

*Contains* account of the festival (Aug. 18) of these saints, considered as protectors of domestic animals: the assembling of several thousand Permians (Zyryans), the sacrifice of oxen (by bleeding to death), division, blessing and eating of the meat; a ritual bathing in the river, etc. The author was present at one feast and witnessed the sacrifice of 70 oxen.

*Copy seen:* DLC; InU.

**24329. MIKHAILOV, S.** Arkhipelag Shpitsbergen. (Vokrug sveta, Feb. 1952. no. 2, p. 44-48, illus., maps) *Title tr.:* The Spitsbergen archipelago.

*Contains* brief description of the general features, area, climate, animal life, etc., of Svalbard and of Bjørnøya to the south of it. The discovery of Svalbard, its subsequent exploitation, the struggle for its possession, the settlement in 1920 of sovereignty on Norway, Russia's agreement to it in 1924, are sketched. An account is added of Russian exploration since 1912, of the coal fields on West Spitsbergen, their importance, exploitation and present conditions.

**MIKHALEV, P. F.,** see Semiaikin, F. M., & P. F. Mikhaev. On the probable mechanism of the formation of periodic ice streaks. 1937. No. 26037.

**24333. MIKHALEVSKIĬ, L.** Zagotovki i tovarosnabzhenie Murmana. (Leningradskaya oblast', May 1928. v. 1, no. 5, p. 74-80) *Title tr.:* Stocks and commodity supply of the Murman.

The report deals with conditions in the fishing, forest and fur industries and transportation problems of the northern part of Kola Peninsula. Overlapping, parallelism and fragmentation in the industries coupled with insufficient financing are criticized and means of improvement recommended. *Copy seen:* DLC.

**24334. MIKKELSEN, EJNAR, 1880-** The Eskimos of East Greenland. (Canadian geographical journal, Aug. 1951. v. 43, p. 88-98, illus.)

Summary account for general readers of the history, early customs, changes wrought by Danish administration, present settlements, economic and social conditions, and change in culture of the East Greenland Eskimo, especially at Angmagssalik. *Copy seen:* DGS; DLC.

**24335. MIKKELSEN, EJNAR, 1880-** Øst-Grønland. (In: Birket-Smith, K., and others. Grønlands bogen, 1950. v. 2, p. 251-68, incl. 4 p. of illus.) *Title tr.:* East Greenland.

Author notes traces of early Eskimo habitation north of Scoresby Sound, lack

of such signs south of Scoresby Sound to Angmagssalik; sketches 19th century development of settlements in southeast Greenland; overcrowding in recent times at Angmagssalik and the establishment of the Scoresby Sound colony following 1924; remarks throughout on Europeans' enterprises related to East Greenland colonies and on weather and radio stations on East Greenland. Bibliography (4 items). **Copy seen:** DSI-M.

**24336. MIKKOLA, AIMO.** The Vähäjoki iron ore in Tervola, northern Finland. (Finland. Geologiska kommission. Bulletin, 1947. 140, p. 261-80, illus., tables)

Contains geologic data on the area which was investigated by means of drilling and magnetic measurements following report of strong compass disturbances, and geological mapping by the author in 1945. The ore was determined to be not practical but geologically interesting. Author describes the general geological features, magnetic disturbances, rocks, ore types, chemical composition, genesis of the ore. A comparison with the magnetite ores of Kareliides is added.

"The iron ore of the Vähäjoki district . . . is not of magmatic origin. It occurs in pre-Cambrian phyllites and in the zone along their contact with dolomite. The district was subjected to low-grade metamorphism during which iron present in the phyllites, which were originally chemical sediments, migrated and was concentrated and recrystallized as magnetite."—Geological Society of America, *Bibliography and index of geology* v. 15, 1950, p. 193. **Copy seen:** DLC.

**24337. MIKKOLA, ERKKI, and T. G. SAHAMA.** The region to the south-west of the "granulite series" in Lapland and its ultrabasics. (Finland. Geologiska kommission. Bulletin, 1936. no. 115, p. 357-71, tables, map, diagrs.)

Account of zone between rocks of southern Lapland and the granulite area in the North, special tectonic features of the latter being prevalent in the zone under study; geological data on the varied rocks of this zone, comparison with those of the granulite series, chemical analyses of the rocks are given. **Copy seen:** DLC.

**24338. MIKKOLA, ERKKI.** Ueber den Nattangenranit im Finnischen Lapplande. Helsinki, 1928. 22 p. plate, illus., diagr., map. (Fennia, v. 50, no. 12)

**Title tr.:** On the Nattanen granite in Finnish Lapland.

Contains an account of a study of four granite massifs occupying parts of the Sodankylä, Inari and Petsamo districts, and called "Nattanen" by the author after the highest peak of the group, Nattastunturit. Discussion of the divisions and morphology of the area, mineralogy and chemistry of the rocks, fissures and veins, intrusion mechanics of the Nattanen-granite; observations on individual massifs and comparison with other granite massifs. Bibliography (17 items). **Copy seen:** DLC.

**24339. MIKKOLA, ERKKI.** Ultraemäksisten kivilajien vaikutus kasvillisuuteen Lapissa. (Luonnon tutkija, 1938. v. 42, no. 1, p. 21-27, illus., map) **Title tr.:** The effect of ultra-basic rock types on vegetation in Lapland.

Contains data on the relationship between the occurrence of certain flora and the chemical content of some rock types in Finnish Lapland. **Copy seen:** DLC.

**24340. MIKOLA, PEITSA.** Koivunvesomisesta ja sen metsänhoidollisesta merkityksestä. Helsinki, 1942. 102 p., illus., tables, diagrs. (Acta forestalia fennica, 50:3) **Title tr.:** The sprouting of birch and its significance to forest care.

This study, covering areas over all Finland, including Pera Pohjola and Sodankylä in the North (1938-40), gives data on sprouting as a plant physiological factor, and on conditions, etc. affecting sprouting. Summary in German. **Copy seen:** DLC.

**24341. MIKOLA, PEITSA.** On the physiology and ecology of *Cenococcum graniforme* especially as a mycorrhizal fungus of birch. Helsinki, 1948. 104 p., illus., tables, diagrs. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 36:3)

A study carried out at the Institute of Physiological Botany, University of Uppsala in 1947, on this fungus which occurs on spruce, birch, and pine in the North. Bibliography (100 items). Summary in Finnish. **Copy seen:** DLC.

**MIKOLA, PEITSA, see also Hustich, I., ed.** Recent climatic fluctuations Finland; symposium. 1952. No. 22755.

**24342. MILITARY ENGINEER.** Alaskan plans and projects. (Military engineer, June 1949. v. 41, p. 213)

"Since 1911, considerable work has been done in Alaska by the Corps of Engineers. They have currently authorized a comprehensive survey of the territory to study the needs of the rapidly expanding population beyond the present total of 100,000 inhabitants. Projects now in progress include: (1) straightening and deepening the channel at Wrangell Narrows, (2) provision of small boat harbors, and (3) building projecting jetties and a breakwater at Nome."—SIPRE.

*Copy seen:* DLC.

**24343. MILITARY ENGINEER.** American forces in the Aleutians (illustrations), (Military engineer, July 1943. v. 35, p. 347-51)

Reproductions of official U. S. Navy photographs of units of the American armed forces, showing some landscapes, shore lines and local terrain of the Aleutian Islands.

*Copy seen:* DLC.

**24344. MILITARY ENGINEER.** Arctic clothing problems. (Military engineer, Nov.-Dec. 1950. v. 42, p. 479, illus.)

*Contains* note of special requirements in construction equipment designed for use by men in bulky arctic clothing: wider doors and seats, etc., more widely spaced pedals; hand levers, latches, control knobs, etc., designed to permit operation by men wearing clumsy heavy mittens and outsize footgear. Standard commercial construction equipment is not always designed for this use; designers at the U. S. Army Engineer Research and Development Laboratories have studied the problem, with view to incorporating these requirements in specifications for construction equipment to be used in the North.

*Copy seen:* DLC.

**24345. MILITARY ENGINEER.** Arctic housing. (Military engineer, Sept.-Oct. 1950. v. 42, p. 399, illus.)

"A new prefabricated building, designed to withstand arctic winds of 100 mph and temperatures of  $-65^{\circ}$  F, has been completed by the Engineer Research and Development Laboratories, Fort Belvoir, Virginia. The building is of stressed skin aluminum construction. It was designed primarily for troop occupancy and the unit contains its own heating and sanitation facilities." (Item 1260, bibliography prepared by Purdue University).—SIPRE.

*Copy seen:* DLC.

**24346. MILITARY ENGINEER.** Improved ice harvesting. (Military engineer, July-Aug. 1949. v. 41, p. 290-91)

"The Bureau of Yards and Docks has converted a lightweight timber tractor saw to an ice saw by the substitution of tires with metal cleats and a thicker blade adjusted to cut to a designated depth. The device is of importance because harvested ice constitutes the main water supply in many areas of the Arctic. Forty tons of ice can be cut and stored in 48 man hours. The tractor saw can be readily converted to a timber saw or used for digging postholes by the addition of special attachments."—SIPRE.

*Copy seen:* DLC.

**24347. MILITARY ENGINEER.** Machinery in the Antarctic. (Military Engineer, Sept. 1948. v. 40, p. 428)

"Seven years of exposure to sub-zero Antarctic temperatures had little effect upon the operation of four "Dieselectric Plants" made by Witte Engine Works of Oil Well Supply Company, U. S. Steel subsidiary. Two of the units operated continuously during the 1947 winter night to provide steady electric light and power for radio, scientific equipment, and other electrical appliances."—SIPRE.

*Copy seen:* DLC.

**24348. MILITARY ENGINEER.** Navy Arctic talkie films. (Military engineer, May-June 1950. v. 42, p. 218)

*Contains* note of films entitled "U. S. Naval Operations in Alaska" made available for loan to engineering societies by U. S. Navy Bureau of Yards and Docks. Made at Point Barrow, Alaska, beginning in 1947, they are on 16-mm. film, in full color with complete narration.

*Copy seen:* DLC.

**24349. MIL'KOV, F. N.** K analizu landshaftnykh (fiziko-geograficheskikh) rubezhei na russkoĭ ravnine. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1952. t. 84, no. 1, p. 11-25, text map) *Title tr.:* On the analysis of landscape (physico-geographical) boundaries of the Russian plain.

*Contains* a study of the zones or lines where a sharp transition between two physico-geographical regions occurs. These boundaries are classified and discussed as: climatic-zonal, the meridional, orographic, geological, limits of post glaciation; geomorphological boundaries, and river valleys as landscape boundaries. The arctic areas of European Russia are

included and are best delimited in the climatic-zonal and orographic classes; the tundra and taiga are discussed in the chapter dealing with the latter (p. 16-17). Bibliography (34 items). This paper was immediately challenged by A. G. Isachenko, q. v.

**Copy seen:** DLC.

**24350. MILLER, ALBERT J.** Physical fitness for strenuous work in relation to the survival situation in a cold environment. (Journal of aviation medicine, Feb. 1949. v. 20, p. 65-67, 72, table)

Results of tests given to 18 men in good health, who lived outdoors under simulated survival circumstances, and on differing diets. Results showed that "young healthy men who lived in a severely cold environment for ten days on a high dietary allotment, maintained or even improved their ability to do strenuous work." Also showed that "the higher the control physical fitness index of the subject, the greater is the fall shown after 6.5 days of starvation in an extremely cold environment."

**Copy seen:** DLC.

**24351. MILLER, ALBERT J.** Study of certain blood properties in healthy men transferred from a sub-tropic to a sub-arctic environment. (Journal of aviation medicine, June 1949. v. 20, p. 201-206)

Thirty subjects who had moved from Texas to Alaska were studied and found to exhibit no marked changes. No evidence is offered for occurrence of acclimatization to cold. Bibliography (12 items).

**Copy seen:** DLC.

**24352. MILLER, DON JOHN, 1919-** . Geology at the site of a proposed dam and reservoir on Power Creek near Cordova, Alaska. [Washington, D. C.] 1951. 8 p. illus., 2 fold. plates (1 map). (U. S. Geological Survey. Circular 136) Process printed.

Contains the report of a geologic investigation of Power Creek in Chugach National Forest, Alaska. Folded and slightly metamorphosed argillite, sandstone, lava, tuff and volcanic breccia, comprise the bedrock; a fault zone passes through the dam site and produces the only area of intense deformation and fracture, which renders part of the reservoir and dam site insufficiently water tight and strong to provide foundation and floor of the proposed structures.

**24353. MILLER, E. WILLARD.** Agricultural developments in interior Alaska. (Scientific monthly, Oct. 1951. v. 73, p. 245-54, illus., 3 sketch maps)

Contains a survey of climatic features, land ownership and clearing, crops and livestock in the Fairbanks region of the Tanana valley, central Alaska, based on field research in 1948 and 1950. Maps show relief, vegetation, and cleared land of the region. **Copy seen:** DGS; DLC.

**24354. MILLER, FERDINAND FERDINANDOVICH, 1837-1900.** Unter Tungusen und Jakuten. Erlebnisse und Ergebnisse der Olenek-Expedition der Kaiserlich russischen geographischen Gesellschaft in St. Petersburg. Leipzig, F. A. Brockhaus, 1882. x, 326 p., front., 3 pl., fold. map. **Title tr.:** Amongst Tungus and Yakuts. Experiences and results of the Olenek expedition of the Imperial Russian Geographical Society of St. Petersburg.

An account of the expedition to the Lower Tunguska, Olenek and Lena Rivers 1873-75, headed by Chekanovskii, in which Miller participated making astronomical topographic and magnetic observations. He deals here mainly with the later phase of the expedition which concerned the valley of the Olenek River (see also *Arctic Bibliography*, No. 3032, 3036). He gives a detailed itinerary (also shown on map); regular weather observations; accounts of animal and plant life; reindeer; the population, its life, habits and occupations; geological observations; notes on the sea, fishing and hunting; astronomical observations; auroras; detailed account of towns and settlements.

*Appendix* (p. 292-326) contains: (1) a survey of the flora of the Olenek River; (2) survey of the geological conditions of the Lower Tunguska; (3) observations on the temperature at various heights above the snow. **Copy seen:** DLC.

**24355. MILLER, HARVEY, and L. MEYERS.** The sinking of the *Vermay*. (Alaska sportsman, Jan. 1951. v. 17, no. 1, p. 6-11, 30-32, illus.)

Graphic account (as related to L. Meyers by one of the two survivors) of a storm and shipwreck off Cape Muzon, Dall Island, Southeast Alaska in Aug.

1950, in which Rev. Verne Swanson, pastor of the church at Craig, Alaska and captain of the *Vermay* was lost.

**24356. MILLER, L. A.** Observations on the bionomics of some northern species of Tabanidae (Diptera). (Canadian journal of zoology, June 1951. v. 29, p. 240-63, illus., 2 plates, table, diagrs.)

Results of studies carried out during spring-summers of 1948-49 for the Division of Entomology, Dept. of Agriculture, Ottawa, on the deerflies and horseflies of the Churchill, Man. region. Ten species are recorded, three for the first time, taxonomy is discussed. Author describes "methods of rearing the immature stages, of collecting adults, emerging in the field, of estimating larval and adult populations, and of correlating adult activity and weather conditions." "It is established that Tabanidae in this region overwinter in the larval stage and that most species have at least a three-year life cycle." Certain parasites and predators are recorded. Bibliography (23 items).

**Copy seen:** DGS; DLC.

**24357. MILLER, MAYNARD MALCOLM.** Drifting ice islands of the North. (Harvard alumni bulletin, Apr. 19, 1952. v. 54, no. 14, p. 592-94, 596, 600, illus., map)

Contains a detailed account of a flight, Aug. 1-2, 1951, in search for the so-called "ice islands." The route was from Fairbanks, via Prince Patrick to northern Ellesmere Island thence to the vicinity of the Pole and back to Fairbanks. The ice islands  $T_1$  and  $T_2$  were located and studied. Their similarity with, and probably origin from the "ice shelf" found fringing large land areas during this trip, is stressed.

**Copy seen:** DLC.

**24358. MILLER, MAYNARD MALCOLM, and W. O. FIELD.** Exploring the Juneau ice cap. (Research reviews, Apr. 1951. p. 7-15, illus., map)

**24359. MILLER, MAYNARD MALCOLM.** Four seasons on the Juneau Ice Field, Alaska. (Explorers journal, Winter-Spring 1951. v. 29, p. 1-16, illus., sketch maps)

Contains an account of field research begun in 1948 and continued through the summer seasons of 1949 and 1950. Includes information on the location of the area and of the main base camp, personnel, the five-week reconnaissance expedition of 1948; organization of summer 1949 expedition, transport and field work of the team, including meteorological, geophysical and seismic-depth studies, ecology, ice movements, micro-ice research, surveying, bed-rock geology, etc., construction of the main research station. Field work in 1950 included studies on snow and glacier ice, meteorology, geology, botany, mapping, and continuation of other investigations including food and equipment testing. The account closes with note of an eight-man party going into the ice field for Jan.-Feb. 1951, and list of the project's personnel for each of the four seasons.

**24360. MILLER, MAYNARD MALCOLM.** Glacier tunnel observations in Alaska. (Journal of glaciology, Mar. 1952. v. 2, no. 11, p. 69-70)

Contains notes on observations of englacial temperature and movement, made by an untrained observer in prospecting tunnels in an unnamed glacier near Hyder, Southeast Alaska.

**Copy seen:** DLC.

**24361. MILLER, MAYNARD MALCOLM.** Instruments and methods: Englacial investigations related to core drilling on the upper Taku Glacier, Alaska. (Journal of glaciology, Oct. 1951. v. 1, p. 579-80, plate)

"Samples of névé and undisturbed ice cores at a depth of nearly 300 ft. were obtained from the Taku Glacier, Alaska as part of the Juneau Ice Field Research Project [summer 1950]. A rotary Pioneer Straitline Drill Rig was used and various experiments in ice-drilling methods were undertaken. Mineralogic and petrofabric analyses of ice cores indicated a preferred orientation of crystals at low angle to the horizontal. Englacial rates of flow were measured by means of aluminum pipe lengths lowered into drill holes and a determination of the initial alignment was made with a single-shot bore hole survey instrument. Englacial

temperatures were measured by spaced thermistors."—SIPRE. Full report on results is to appear later.

**24362. MILLER, MAYNARD MALCOLM.** The Juneau ice field, Alaska, 1948-51. (American alpine journal, 1951. v. 8, p. 113-18, 4 plates)

Résumé of scientific program for the Juneau Ice Field Research Project, initiated in 1948 under auspices of the American Geographical Society, U. S. Office of Naval Research, and a number of other agencies. **Copy seen:** DLC.

**24363. MILLER, MAYNARD MALCOLM.** Preliminary notes concerning certain glacier structures and glacial lakes on the Juneau Ice Field. (*In his & others:* Scientific observations of the Juneau Ice Field Research Project, Alaska 1949 Field Season, p. 49-86, incl. tables)

"The relationship of shearing in the upper and more rigid layers of glaciers to the surficial expression of arcuate banded features on peripheral glaciers are discussed. Successive layering of annual accumulation and related horizontal *blue bands* in the névé of the upper Taku Glacier was analyzed and measured on walls of crevasses and on profiles examined in pits dug into the firn. Sub-vertical and sub-cylindrical ice columns and related ice dikes and lenses were studied in the firn at several locations on the ice field. The relation of the horizontal ice bands to vertical ice columns is a part of the meltwater problem. The metamorphism of firn snow into glacier ice is discussed."—SIPRE. **Copy seen:** CaMAI.

**24364. MILLER, MAYNARD MALCOLM.** Preliminary report of field operations, the Juneau Ice Field Research Project, 1949 season. New York, American Geographical Society, Jan. 20, 1950. 36, [13] p. map, diagrs. on 3 plates. (J. I. R. P. report no. 2)

Contains account of "what in general was done and how the details of the program were placed in effect," but not scientific results. Logistics and air operations are summarized: supplies dropped by parachute and free-drop, heavier equipment transported by ski-wheeled aircraft. Fourteen camps throughout the ice field were occupied and a network of routes and observations stations established over approx. 500

square miles of terrain, in the period July-Sept. The scientific programs are presented from party members' field notes: glaciology, meteorology, plant ecology (high and low level investigations), geophysics (seismic soundings directed by Dr. Thomas Poulter), bed-rock geology, mapping and survey; and (p. 29-32) medical report: supplies, general health of expeditionary personnel, test of anti-sunburn preparation, exercise tolerances. *Appendices* [13 p.] give: (A) personnel; (B) flight operations and air supply data; (C) ablation-accumulation records; (D) record of sunshine at Taku camp 10; (E) meteorological synopsis, daily record of: wind direction and force, precipitation, average daily and minimum night temperatures, humidity, and overcast for Camp 10 (4000' elevation) July 4-22.

This report is summarized in *Polar record*, Jan. 1951. v. 6, no. 41, p. 99-101. It is superseded by J. I. R. P. report no. 5 *infra*. **Copy seen:** CaMAI.

**24365. MILLER, MAYNARD MALCOLM.** Progress report of logistical operations Juneau Ice Field Research Project, Alaska 1949-1950 and 1951. New York, American Geographical Society, 1951. 4\* p. l., 45 p. 19 illus., and map on 9 plates. (Juneau Ice Field Research Project. Report no. 5) mimeographed.

Contains report (p. 1-8) on supply of 15 main camps and a half dozen additional sites in an area of 700 sq. miles, mostly glaciated and extremely rugged, necessitating aerial supply. 96 per cent of equipment and supplies (67 tons) were delivered by parachutes, free-air-drops or by ski-plane (breakdown given). Types of aircraft and their effectiveness under specific conditions, and parachutes types are noted. Free-fall bundles varying from a few to several hundred pounds, representing 18¾ tons of supplies, were dropped with less than 6 per cent loss; flight and drop conditions are commented on. In pt. 2 (p. 9-45) items of equipment and supply tested for various U. S. Government agencies are reported on: food rations, sleds, toboggans, skiing equipment, snow goggles, articles of clothing, tents, etc., stoves, radio, engineering and medical equipment, oversnow vehicles (weasels), etc. This report was prepared by Mr. Miller with suggestions and comments by other members of the Project. **Copy seen:** CaMAI.

**24366. MILLER, MAYNARD MALCOLM, and others.** Scientific observations of the Juneau Ice Field Research Project. Alaska 1949 field season. New York, American Geographical Society, July 1952. vi, 163 p., 51 illus. incl. sketch maps, diagrs. on 18 plates. (Juneau Ice Field Research Project, Report no. 6)

Contains a fuller account of the field work reported in J. I. R. P. no. 2 (*supra*) which is hereby superseded. Following (1) introductory summary of plans, personnel, support, logistics, ground operations, the various programs are reported: (2) glaciology; (3) meteorology; (4) ecology; (5) geophysics; (6) bedrock geology; (7) mapping and survey. *Appendices* present data on personnel, flight operations and air supply, meteorological summaries, duration of sunshine, botanical specimens.

The glaciological report includes: Investigations in the Taku Glacier firn, by F. B. LEIGHTON, q. v.; and Preliminary notes concerning certain glacial structures . . . by M. M. MILLER, q. v.

R. B. Forbes contributed to the Bedrock geology report; and R. G. Merritt to Mapping and survey.

A report of the snow and ice project, prepared under contract No. W-21-018-eng-676, U. S. Army Corps of Engineers. Minneapolis, Minn., January, 1950. Litho-

printed. Edwards Brothers Inc., Ann Arbor, Mich., 1951. v. 62 p., 12 charts, fold. map. (SIPRE report no. 1)

"This report was written to analyze the requirements for and recommend an orderly program for research in snow, ice and permafrost, including the use of existing facilities and the recommendation of any new facilities to accomplish the research. Military end points and corresponding problems are enumerated and the problems in turn reduced to fundamental operations, environmental factors, and properties. Twenty-seven research projects are listed with priority, and briefly described as to nature and scope. Among the appended information [p. 17-62] is a summary of the present status of knowledge of snow, ice, and frozen ground. The report is particularly complete in an appraisal of snow and ice. Frozen ground is treated much less thoroughly."—Abstract by SIPRE Project, Library of Congress.

**24384. MIROV, NICHOLAS TIHO, 1893-** . Geography of Russia. New York, Wiley, [1951]. xii, 362 p., sketch maps, diagrs.

Written primarily for college students and general readers, this survey is based on 20th century Russian sources, and presents first generally then regionally the geography of the U.S.S.R., in its physical rather than economic or human aspect. Pts. 1-2 (p. 3-81) describe briefly the geology, topography, climate (including permafrost, p. 38-42), rivers and lakes, historical geography, the peoples, their languages and religions.

Pt. 3 (p. 85-347) describes the climate, topography, soils and vegetation, animal life and peoples of twenty regions, including the tundra (p. 85-99), mountains of northeastern Siberia (p. 277-88), Okhotsk coast and the island of Sakhalin (p. 305-315), Kamchatka Peninsula and neighboring islands (p. 316-32), and the arctic islands (p. 333-47). Includes full bibliographic footnotes and an index.

**24397. MOBERG, ADOLF, 1813-1895.** Fenologiska iakttagelser i Finland åren

1750-1845. Helsingfors, Finska litteratur-sällskapets tryck., 1894. xi, 165 p. (Bidrag till kännedom af Finlands natur och folk, Häft. 55) **Title tr.:** Phenological observation in Finland, 1750-1845.

Though termed a "supplement," this is rather a second edition, with a few additional data, of the author's original work *Naturalhistoriska daganteckningar gjorda i Finland åren 1750-1845*, q. v.

**Copy seen:** DLC; MH-Z.

**24398. MOBERG, ADOLF, 1813-1895.** Naturalhistoriska daganteckningar gjorda i Finland åren 1750-1845. (Societas pro fauna et flora fennica. Notiser ur förhandlingar, 1857. t. 3, p. 95-250) **Title tr.:** A natural-history diary for the years 1750-1845 in Finland.

Contains phenological data for the years 1750-1845 compiled by the author from a variety of records and his own observations, covering various regions of Finland including localities in Kuusamo (66° N.), Sodankylä (67°30' N.), Utsjoki (69°55' N.), Rovaniemi (66°30' N.), and Inari (69° N.). The data comprise tables of the blossoming time of about 200 plants (p. 113-89) including some woody species and such economic plants as wheat, rye, barley, potatoes; observations on migratory habits of over 60 species of birds; spawning time of some amphibians and fishes; observations on annual appearance of 15 species of various insects; time of the ice break-up on rivers in Finland and of the first snowfall.

**Copy seen:** MH-Z.

**24399. MOBERG, ADOLF, 1813-1895.** Sammandrag af de klimatologiska anteckningarna i Finland år 1878. (Finska vetenskaps-societeten, Helsingfors. Översigt af förhandlingar, 1879. Bd. 21, p. 261-84) **Title tr.:** Summary of climatological notes from Finland for the year 1878.

Contains animal and plant phenological observations from a series of stations including Rovaniemi, Sodankylä, Utsjoki in the North. Dates of arrival of migratory birds; appearance of leaves and blossom on common trees, shrubs and cultivated plants are offered, as well as data of ice formation and break-up. Air temperatures and precipitation represent only the more southerly localities. These climatological summaries with more limited scope were a feature of this journal from 1862. They continued through 1893 (Bd. 36, p. 199-229) and included data from a few other northern stations.

They were presented by Moberg except those of 1879 by G. H. Ohmman, 1882 and 1886 by N. K. Nordenskiöld.

**2425. MOLCHANOV, A. A.** Promerzanie i ottaivanie pochvy. (Lesnoe khozaiŭstvo, 1950, t. 3, no. 1, p. 27-31, tables) **Title tr.:** Freezing and thawing of soil.

"On the basis of some detailed but fragmentary data made by the Institute of Forestry of the Akademiâ nauk, on the temperature of snow and soil at various depths (0 to 60 cm.) at 7, 13 and 19 h. (1945-1948), the author confirms recent ideas about the connection between the character of the snow cover, etc. and the depth of freezing of soil. Determination of depth of freezing cannot be precise when thermometers are used, because the freezing point varies with physical and chemical composition of soil. Heavy lime soils do not freeze even at temperatures much below the usual ( $-0.1$  to  $-0.5^{\circ}$  C.). The speed of spring thawing also varies, the daily mean ranging from a speed of 8 cm. to 0.1 cm. The highest speed occurs in pine forests and the lowest in bare fields."—*Meteorological abstracts and bibliography*, Oct. 1950, v. 1, no. 10, p. 651. **Copy seen:** DLC.

**24428. MOLNAR, GEORGE WILLIAM, 1914-** . Energy expenditure and endurance of men in an arctic bivouac. Fort Knox, Ky. April 1950. 58 p., illus., tables, diagrs., mimeographed. (U. S. Army. Medical Dept., Field Research Laboratory, Project no. 6-64-12-03-(13))

*Contains* report on seven men studied in a 14-day temperate bivouac exercise during November, and in a 13-day arctic bivouac exercise during the following February. Methods, materials and results of study are given in detail. The results indicate physiologically significant similarities and differences between the two environments. Following variables were present only in the Arctic: ketonuria; an unidentified, reducing substance in the urine, probably a glycerinate, and an unidentified urinary pigment, possibly a hemoglobin degradation product. Psycho-physiological aspects are also discussed. Bibliography (39 items). Appendices give list of clothing worn, etc. **Copy seen:** DSG.

**24429. MOLNAR, GEORGE WILLIAM, 1914-** , and **E. F. ADOLPH.** Heat exchanges of man in cold outdoor environments. (Federation proceedings, Feb. 1946. v. 5, p. 74)

*Contains* an abstract of observations on men exposed to cool outdoor environments for one to four hours. Surface and rectal temperatures, heat production and loss are recorded and analyzed. **Copy seen:** DLC.

**24430. MOLNAR, GEORGE WILLIAM, 1914-** . Survival of hypothermia by men immersed in the ocean. (American Medical Association. Journal, July 27, 1946. v. 131, p. 1046-50, diagrs.)

"The recorded times of immersion of shipwreck survivors, on file in the Bureau of Medicine and Surgery, U. S. Navy, were plotted against the seawater temperatures," and the resultant curve is said probably to represent a limit of tolerance. The literature on survival of experimental survival is discussed and description given of physiologic reactions to cold, leading to death. **Copy seen:** DLC.

Moskva, Partinoe izd-vo, 1932. 95 p. **Title tr.:** On the second five-year plan; reports of the 17th conference of the VKP (b) [All-Union Communist Party (bolshevik)] on the directives for completion of the second five-year plan of the national economy of the U.S.S.R.

This general report includes sections on the development of arctic areas both in Europe and Asia. **Copy seen:** DLC.

**MOLTREKHT, A.,** *see* Bianki, V. L. Spisok ptits r. Anadyra. 1908. No. 20676.

**24433. MONCHADSKIĬ, ALEKSANDR SAMOILOVICH.** Aktivnost' napadeniia komarov na cheloveka v prirodnykh usloviakh. (Akademiia nauk SSSR. Izvestiia. Otdelenie biologicheskikh nauk. Seriiã biologicheskaiã, 1946. no. 2-3, p. 233-50) **Title tr.:** Mosquito attacks on man as observed under natural conditions.

*Contains* data on environmental factors (temperature, relative humidity, wind, light, etc.) influencing the activity of mosquitoes against man, based partially on observations in the northern regions (*see* p. 243) of the U.S.S.R.; bibliography (38 items). Summary in English. **Copy seen:** MH.

**24434. MONCHADSKIĬ, ALEKSANDR SAMOILOVICH.** Lichinki komarov (sem. Culicidae) SSSR i sopredel'nykh stran. Moskva-Leningrad, Izd-vo Akademii nauk SSSR, 1936. 383 p., illus.

(In: Akademiia nauk SSSR. Opredeliteli po faune SSSR. no. 24) **Title tr.:** Larvae of mosquitoes (fam. Culicidae) of the U.S.S.R. and adjacent countries.

**Contains** in the general part (p. 1-84) data on external and internal morphology, coloring, movements and growth of the larvae of culicine mosquitoes (Culicidae), their evolution and the methods of determination; bibliography (over 120 items) p. 79-84. The special part (p. 85-375) contains the tables for the determination of the larvae of the families of Diptera nematocera, families, subfamilies, tribes, genera and species of Culicidae, with descriptions, synonymy and data on ecology and geographic distribution in the U.S.S.R. and other countries. Many species native to northern regions are included.

The paging of the work is defective: p. 177-80 follow p. 174; p. 185-88 follow p. 192. Another edition was published: *Lichinki krovososushchikh komarov SSSR*, 1951, q. v. **Copy seen:** DLC; MH-Z.

**24435. MONCHADSKII, ALEKSANDR SAMOILOVICH.** Lichinki krovososushchikh komarov SSSR i sopredel'nykh stran (podsem. Culicinae). 2-e ispravlenoe i dopolnennoe izdanie. Moskva-Leningrad, Izd-vo Akademii nauk, 1951. 290 p., illus. (142 figs.). (In: Akademiia nauk SSSR. Opredeliteli po faune SSSR. no. 37) **Title tr.:** Larvae of blood-sucking mosquitoes of the U.S.S.R. and adjoining countries (subfamily Culicinae). Second revised and enlarged edition.

This edition differs considerably from the first (*Lichinki komarov* 1936, q. v.). New data accumulated during the fifteen-year interval are added, larvae of some oriental species included, determination tables are rewritten, many illustrations changed; an article on the evolution of the family Culicidae is dropped, the bibliography is drastically curtailed (37 items) and some African and southern Asian species excluded.

**24443. MONTGOMERY, MARGARET R.** Climate. (In: Baird, P. D., and others. *Baffin Island Expedition*, 1950. Pub. in: *Arctic*, Dec. 1950. v. 3, p. 144-46)

Brief discussion of weather, May 25-Aug. 31, the expedition's Camp B situated at the head of Clyde Inlet where conditions are "more favorable than at the heads of the more exposed fiords," also inland weather. Remarks on sunshine, temperature, precipitation and wind, with comment "that Camp B enjoyed a more favorable climate than was typical of the area as a whole [east Baffin coast between about 69°30'-70°35' N. 69°40'-72°15' W.]. The aridity, the high daytime temperature and the diurnal range of temperature . . . stress its continental character."

Copy seen: DAI; DLC.

**24444. MONTGOMERY, MARGARET R.** Does the Bay freeze? (Beaver, June 1951. Outfit 282, no. 1, p. 12-15, illus.)

Discussion of winter ice conditions on Hudson Bay as studied since 1948 by McGill University, and the Canadian Meteorological Service parties using Royal Canadian Air Force planes for regular air reconnaissances.

Copy seen: DSI-M.

**24445. MONTGOMERY, MARGARET R.** Further notes on ice islands in the Canadian Arctic. (*Arctic*, Oct. 1952. v. 5, no. 3, p. 183-91, illus., map)

Contains account of ice islands discovered since those discussed by L. S. Koenig, q. v. 31 new islands are indicated on a map as well as changes in location of the islands previously reported, all the data assembled from air photographs. The distribution, position, drift, etc. of the islands are discussed. Some unexplained features ("lakes") of the inland-ice on Ellesmere are noted (from recent photographs) in relation to features of northern Ellesmere shelf ice.

Copy seen: DLC.

**24446. MONTGOMERY, MARGARET R.** Hudson Bay ice reconnaissance 1949-50. (*Arctic circular*, Oct. 1950. v. 3, no. 4, p. 40-46)

Results of four flights arranged by the Defence Research Board of Canada, Nov., Dec., Jan. and Mar., "to observe dates of freezing-up in various parts of the Bay and to note the characteristics of the

winter ice cover over the areas as a whole." The data are summarized for James Bay, and for the east coast, center and north, west coast and south Hudson Bay. **Copy seen:** CaMAI; DLC.

**24465. MOORE, EDWARD W.** A summary of available data on quality of arctic waters. National Research Council, 1949. 14 p. incl. tables. (Its: Committee on Sanitary Engineering and Environment, Division of Medical Science)

*"Data compiled by the USGS, U. S. Army, and AAF were examined to determine the characteristics of arctic waters which might have a bearing on their treatment and use as water supplies. It was found that the surface waters of the northwest Canadian Arctic, northern and central Alaska possess high pH values, which reduce the efficiency of chlorination at low temperatures. The silt in larger arctic rivers necessitates coagulation and filtration. Ground waters of the northwest Canadian Arctic were found unsatisfactory; those of northern Alaska were somewhat better but required special treatment. The surface and ground waters of eastern Canada and southern Alaska were adequate for water supply."—SIPRE.*

**24476. MORIN, G.** Médullo-surrénale et régulation thermique, 1. Action calorigène de l'adrénaline: démonstration; signification. (Revue canadienne de biologie, 1946. v. 5, no. 2, p. 211-34, 3 fig., 3 tables) **Title tr.:** The adrenal medulla and thermal regulation, 1. Caloric action of adrenalin: demonstration; significance.

Contains a study indicating that adrenalin injected into the hind leg muscle of amyelated, not narcotized dogs increases heat production; when the animals are placed in a temperature around thermal neutrality, the calorogenic action is the function of the given dose, but is not sufficient to overcome thermoregulatory mechanisms and is not accompanied by hyperthermia. The elevation of heat production, definitely around thermal neutrality, decreases in the cold zone. The significance of the findings in the warming-up thermogenesis is discussed. Bibliography (45 items). Summary in English.

**Copy seen:** DLC.

**24477. MORIN, G.** Médullo-surrénale et régulation thermique, 2. Action adrénalino-sécrétrice du froid. (Revue canadienne de biologie, 1946. v. 5, no. 4, p. 388-99, 2 fig., 2 tables) **Title tr.:** The adrenal medulla and thermal regulation, 2. Reaction of adrenal secretion to cold.

Contains an account of experiments with non-anesthetized dogs exposed to cold, with precautions taken to exclude emotional factors; evidence is offered that cold produces increased delivery of adrenalin by the adrenal medulla; the results are ascribed to a specific action of cold and confirm the hypothesis that the medulla plays a part in heat regulation. Bibliography (20 items). Summary in English.

**Copy seen:** DLC.

**24478. MORIN, G.** Médullo-surrénale et régulation thermique, 3. Thermogénèse de réchauffement en l'absence de sécrétion adrénalinique. (Revue cana-

dienne de biologie, 1947. v. 6, no. 5, p. 715-23, fig., 3 tables) **Title tr.:** The adrenal medulla, and thermal regulation, 3. Thermogenesis of warming up, in the absence of adrenal secretion.

*Contains a study on dogs in which adrenal secretion was either deprived of nervous regulation by enervation or abolished by removal of one adrenal, enervation and medulla curettage of the other. Heat production curves for ambient temperatures between 2° and 18° C., and heat production changes at temperatures not exceeding 16° C. were studied. No differences were observed between experimental and control animals. Bibliography (17 items). Summary in English. Copy seen: DLC.*

**24479. MORITZ, ALAN R., and J. R. WEISIGER.** Effects of cold air on the air passages and lungs; an experimental investigation. (Archives of internal medicine, April 1945. v. 75, p. 233-40, 7 fig., 2 tables)

*Contains an account of experiments with dogs made to breathe very cold air (-28° to -50° C.), for 20-133 minutes. Some disturbances and focal destruction of the epithelium in the upper trachea were observed but there was no injury in the lower trachea, bronchi or lungs; an explanation of the rapid warming of the inhaled air, as well as practical suggestions as applied to man, are offered. Copy seen: DLC.*

**24480. MOROZOV, A. I.** Gelfery na Kamchatke. (Priroda, Aug. 1951. v. 40, no. 8, p. 34-35) **Title tr.:** Geysers on the Kamchatka Peninsula.

*Contains a description of a group of 22 active geysers discovered in 1941 by T. I. Ustinova in the region of Kronotskiy Bay, on the eastern coast of the Kamchatka Peninsula. Data are offered on the geological structure of the valley on the southwestern slope of the volcano Kikhpinyeh where the 22 active and many old extinct geysers are located, as well as the author's observations on the activity of these geysers, intervals between and heights (12-40 m.) of the eruptions.*

**24486. MOSKVA. VESOŪZNYĖ NA-UCHNO-ISSLEDOVATEĖLSKIĖ INSTITUT MORSKOGO RYBNOGO KHOZĖYSTVA I OKEANOGRAFIĖ.** Promyslovye ryby SSSR. Moskva, Pishchepromizdat, 1949. ix p., 230 col. plates. Opisanie ryb (tekst k atlasu tsvetnykh risunkov ryb). 787 p., illus., 10 plates.

**Titles tr.:** The commercial fishes of the U.S.S.R. [Atlas. Description of the fishes (text for the atlas of colored illustrations of the fishes).

Atlas contains 230 plates, illustrating fishes, arranged in taxonomic order and reproduced in natural colors and morphological details. The illustrations were painted by 10 artists under the art editorship of N. N. Kondakov and supervision of biologists and ichthyologists. Whenever possible the fish are represented in natural size.

The text volume is a monograph of encyclopedic character and proportions, and is arranged in taxonomic order. Each species is illustrated with a black and

white pen-sketch, usually with additional drawings of mouth-parts, gills, scales, eggs, etc. Ten color plates depict the economically more important forms. The descriptive section on each species is preceded by a list of local Russian names, the names in the languages of Soviet minorities, neighboring and foreign countries. The description itself is arranged under three headings: general information, biology, fishing industry. General information contains data on morphology, local or regional variations and geographical distribution. The sections on biology deal with the habitat (river, sea, brook, etc.); spawning periods and conditions; number of eggs, etc.; growth of young in size and weight; growth in general, often classified in relation to age and locality; food and food habits; competitors and enemies; migration. The sections on the industry offer data on the economic value of the species; fishing methods; seasons, etc., use of fish (food, oil extraction, etc.).

**Appendix** contains illustrated technical glossary, index of names occurring in Russian and those in Latin transcription. Bibliography (56 items).

**24489. MOTORSHIP, New York.** Super ferry in Island service. (Motor-ship, Sept. 1948. v. 33, p. 38-41, illus.)

Description of the 372-ft. *Abegweit* "largest ice-breaking ferry in the world", noting engines, bow construction, navigation equipment, etc. The ship built for year-round service across Northumberland Strait to Prince Edward Island [Canada] is "designed to overcome resistance of ice in three ways: with her bulk which can be moved at a speed of almost 16 knots and her cutaway bow which has been designed to part ice packs; secondly, her trimming and heeling tanks will enable her to be rocked laterally and longitudinally against the threat of becoming ice-locked; finally, the bow propellers will suck water from beneath the ice or push water under the ice directly in front of the ship's bows. The weight and shape of the bows will then smash ice which has been robbed of under-support or has been lifted instead of ice that is firmly supported by the water underneath it."

**24491. MOULD, WARD L.** Corneal opacities in the Alaskan Eskimo. (Archives of ophthalmology, 1940. v. 24, p. 972-74)

Contains report on a study of 800 natives (Eskimos and Eskimo-white persons) made in 1938 in northwestern Alaska. Bilateral opacities of the cornea, covering extensive portions, were found to be relatively common among the natives. Epiblepharon, a "fold of skin horizontal to the margin of the lower lid" is also common and in some cases turns the cilia of the lower lid backward against the eye

ball. Further study will be required to verify whether a connection between the two facts exists. Bibliographical footnotes.

**24492. MOWAT, FARLEY M., 1920?-. People of the Deer.** Boston, Little, Brown and Co., 1952. viii, 344 p. illus., map on lining papers.

Narrative of the author's sojourn in the Windy River region of the Barren Grounds west of Hudson Bay in the spring-summer months of 1947 and 1948, living among the Ihalmiut, he states, a rapidly dwindling group of Caribou Eskimos. Includes descriptions of caribou migrations, information on their fawning grounds in the North and the wintering grounds below Nueltin Lake, author's travel on the Kazan River and adjacent waters, southward to Reindeer Lake and finally eastward by Thlewiazza River to Hudson Bay. Throughout are an amateur observer's detailed accounts and sympathetic interpretation of deer-hunting Eskimos' way of life, character, traditions and history; study of an old shaman; description of the complex of beliefs-fears-and illness as experienced by two of the author's Eskimo companions; notes on the diminishing caribou, the decimation (he claims) of the Ihalmiut by starvation, tuberculosis, and the recent poliomyelitis epidemic; denunciation of the white man's (fur trader, and missionary) effect on Eskimo life and of government's ineffectiveness in stabilizing Eskimo economy.

*Illustrated* with many pen sketches, mainly of individual Eskimos, by Samuel Bryant, and author's sketch map showing waterways (with Eskimo names), caribou routes, etc., in the Ihalmiut country. Reviewed by A. E. Porsild in *Beaver*, June 1952. Outfit 283, p. 47-49.

Brief historical review of early balloon flight plans and efforts, and subsequent well-known airplane flights in the polar regions.

**Copy seen:** DSI-M.

**24507. MÜNSTER, THOMAS GEORG, 1855-1938.** *Agonum aldanicum* Popp. and *A. consimile* Gyll. (Col., Car.). (Notulae entomologicae, 1934, v. 14, no. 3, p. 78-80) **Title tr.:** *Agonum aldanicum* Popp. and *A. consimile* Gyll. (Col. Car.)

Contains a comparative taxonomic study of two closely related ground beetles, *Agonum aldanicum*, described by B. Poppius from a specimen collected by him in Lena River valley (eastern Siberia) and later found in Russian and Finnish Lapland, and *A. consimile* known from Swedish Lapland and northern Norway.

**Copy seen:** DLC; MH-Z.

**24508. MÜNSTER, THOMAS GEORG, 1855-1938.** *Arpedium* (Col. Staphylinidae), a revision of the Norwegian species. (Norsk entomologisk tidsskrift, 1933. Bd. 3, hefte 4, p. 257-66, illus.)

Contains a table for the determination of 4 species and 4 varieties and forms of rove beetles of the genus *Arpedium*, occurring in Norway, a diagnosis of *A. norvegicus* n. sp. with 2 varieties, *v. kittilense* and *v. saalasi*, native to arctic Eurasia, *A. brachypterum* with var. *gyllenhalsi* found in northern Norway and also known from Bear Island, Kola Peninsula and Siberia, and *A. puncticolle* described from the arctic Siberia and occurring in Finnmark, Norway and Kola Peninsula.

**Copy seen:** DA; MH-Z.

**24509. MÜNSTER, THOMAS GEORG, 1855-1938.** *Bembidiini*, I. (Norsk entomologisk tidsskrift, 1932. Bd. 3, hefte 1-2, p. 80-82) **Title tr.:** Species of *Bembidion*.

Contains a table for the determination of 5 species and 2 varieties of coleopterous genus *Bembidion* and descriptive notes on them with data on distribution; includes *B. macropterum*, *B. nitidulum* and *B. graepi*, native to northern Norway. Only pt. I was published.

Contains Latin diagnoses of *Rhagocneme* n. sub-gen. og coleopterous genus *Atheta*, *A. (Rhagocneme) fractipes* n. sp. native to central and northern Norway (Tromsø, Alten), and *A. (Dimetrota) sparreschneideri* n. sp. found in Saltdalen, Vesteraalen and Sydvaranger. For continuation see the author's Bidrag om *Atheta*, 3-4, 1925.

**Copy seen:** DA; MH-Z.

**24511. MÜNSTER, THOMAS GEORG, 1855-1938.** Bidrag til kjendskaben om slekten *Atheta* Thoms. (Col., Staph.) 3-4. (Norsk entomologisk tidsskrift, 1924, pub. 1925. Bd. 2, hefte 1, p. 5-30) **Title tr.:** A contribution to the knowledge of the genus *Atheta* Thoms. (Col., Staph.) 3-4.

Contains a study of various types of microsculpture of the species of the genus *Atheta*, a table for the determination

of the subgenera (one new) and species and notes on their general and Scandinavian distribution; includes at least eleven species native to northern Fennoscandia and Kola Peninsula: This is a continuation of the item above. Summary in English. **Copy seen:** DA; H-Z.

**24512. MÜNSTER, THOMAS GEORG, 1855-1938.** Bidrag till kjendskaben om slekten *Atheta* Thoms. (Col., Staph.) 5-8. (Norsk entomologisk tidsskrift, 1932. Bd. 3, hefte 1-2, p. 5-16) **Title tr.:** A contribution to the knowledge of the genus *Atheta* Thoms. (Col., Staph.) 5-8.

Contains a comparative study of rove beetles, *Atheta procera* and *A. subglabra*, both native to northern Norway; a table for the determination of six species of the subgenus *Aloconta*, of which two are occurring in northern regions; a Latin diagnosis of *A. taxiceroides* n. sp. found in Målselv and Nordreisen; and critical notes on two other species from northern Norway. This paper is a continuation of the item above. Summary in English.

**24518. MÜNSTER, THOMAS GEORG, 1855-1938.** Index Coleopterorum Norvegiae, 1. Fortegnelse over de i Norge hittil iaktatte arter av familierne Clambidae, Corylophidae, Trichopterygidae, Erotylidae, Phalacridae og Lathridiidae. Christiania, A. W. Brøgger, 1901. 43 p. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1901, no. 1) **Title tr.:**

Index of Coleoptera of Norway, I. A list of species of the families Clambidae, Corylophidae, Trichopterygidae, Erotylidae, Phalacridae and Lathridiidae, previously observed in Norway.

Contains a systematic list of 148 species of beetles in six families, with localities and data on total distribution; includes at least 25 species native to northern provinces of Norway.

**Copy seen:** MH-Z.

**24519. MÜNSTER, THOMAS GEORG, 1855-1938.** Norske Ptinidae og Anobiidae. (Norsk entomologisk tidsskrift, 1933. Bd. 3, hefte 3, p. 155-62) **Title tr.:** Norwegian Ptinidae and Anobiidae.

Contains a table for the determination of the genera of coleopterous families Ptinidae and Anobiidae, another table for nine species of the genus *Ptinus* and critical notes and data on distribution of various species, including at least 4 species native to northern regions of Norway; apparently an unfinished work.

**Copy seen:** DA-MH-Z.

**24520. MÜNSTER, THOMAS GEORG, 1855-1938.** Northern *Olophrum* (Col. Staph.). (Norsk entomologisk tidsskrift, 1935. Bd. 4, hefte 1-2, p. 22-30, illus.; 1936, hefte 3, p. 97-102) **Title tr.:** Northern species of *Olophrum* (Col. Staph.).

Contains a critical study of six northern species of coleopterous genus *Olophrum* and some of their intermediate forms (varieties, aberrations, etc.) with data on their Scandinavian and general distribution. Some of these species, like *O. boreale* are widely distributed in northern Scandinavia, northern Europe and Asiatic Russia and Alaska.

**Copy seen:** DA; MH-Z.

**24521. MÜNSTER, THOMAS GEORG, 1855-1938.** Norwegian Chrysomelids. (Norsk entomologisk tidsskrift, 1935. Bd. 4, hefte 1-2, p. 1-17, illus.)

Contains a critical revision of Norwegian Chrysomelids of the genera *Phyllodecta*, *Phaedon* and *Haltica* with tables for the determination of the species, critical notes on 15 species and data on their habitat, host plants and Norwegian and general distribution (Europe and Asia). Includes at least four species native to northern Norway.

**Copy seen:** DA; MH-Z.

**24522. MÜNSTER, THOMAS GEORG, 1855-1938.** The Norwegian *Cryptypnus*

(Col. Elateridae). (Norsk entomologisk tidsskrift, 1935. Bd. 3, hefte 6, p. 362-69)

*Contains* a critical revision of Norwegian species of snapping beetles of the genus *Cryptynus*, split by the author into two genera (*C.* and *Hypnoidus*) with a table for the determination of eight species in two genera), critical notes on them and data on Norwegian and general distribution. Includes six species native to northern Scandinavia.

*Copy seen:* DA; MH-Z.

**24523. MÜNSTER, THOMAS GEORG, 1855-1938.** *Notiophilus* Dumeril (Coleoptera). De norske arter. (Norsk entomologisk tidsskrift, 1922. Bd. 1, hefte 3, p. 138-44) *Title tr.:* Norwegian species of *Notiophilus* Dumeril (Col.).

*Contains* a table for the determination of six Norwegian species of coleopterous genus *Notiophilus*, including critical notes and data on distribution of four species native to northern region of Norway, as well as description of *N. aquaticus* v. *spæthi* n. var. from Tromsø. Summary in English.

*Copy seen:* DA; MH-Z.

**24524. MÜNSTER, THOMAS GEORG, 1855-1938.** Nova etc. ex Norvegia. (Norsk entomologisk tidsskrift, 1923, pub. 1924. Bd. 1, hefte 6, p. 288-94, illus.) *Title tr.:* New etc. [Coleopters] from Norway.

*Contains* Latin diagnoses of three new species of beetles, including *Elaphrus tumidiceps* n. sp. from Lakselv in Porsanger, Finnmark, and *Anaspis s. str.* *norvegica* occurring in extreme southern and northern Norway (Karasjok), and critical notes on three other species (previously unrecorded in Norway) collected in northern regions.

*Copy seen:* DA; MH-Z.

**24525. MÜNSTER, THOMAS GEORG, 1855-1938.** Nye fund og findesteder B. Coleoptera. (Norsk entomologisk tidsskrift, 1923. Bd. 1, hefte 6, p. 257-74) *Title tr.:* New finds and new localities B. Coleoptera.

*Contains* an annotated list of about 175 species of beetles new to the fauna of Scandinavia, Norway or some regions of Norway, including some species native to northern provinces of Scandinavia.

*Copy seen:* DA; MH-Z.

**24526. MÜNSTER, THOMAS GEORG, 1855-1938.** Quediini (Coleoptera), de

norske arter. (Norsk entomologisk tidsskrift, 1922. Bd. 1, hefte 4, p. 183-204)

*Title tr.:* Norwegian species of Quediini (Coleoptera).

*Contains* a critical revision of Norwegian species of beetles of the group Quediini in the rove beetle family Stephylinidae, with a table for determination of the genera, subgenera and species of Fennoscandia, brief characteristics of the species and their distribution in Norway. Includes at least twelve species native to northern regions of Norway. Summary in German.

*Copy seen:* DA; MH-Z.

**24527. MÜNSTER, THOMAS GEORG, 1855-1938.** Some Norwegian *Phytonomus* (Col., Curc.). (Norsk entomologisk tidsskrift, 1935. Bd. 4, hefte 1-2, p. 17-21)

*Contains* a table for the determination of eleven species of coleopterous genus *Phytonomus* with brief data on their distribution in Norway and critical notes on *P. ornatus* and *P. pedestris* native to northern Norway.

*Copy seen:* DA; MH-Z.

**24528. MÜNSTER, THOMAS GEORG, 1855-1938.** Tillaeg og bemaerkninger til Norges koleopterfauna. (Norsk entomologisk tidsskrift, 1926, pub. 1927, Bd. 2, hefte 3, p. 158-68; 1927, pub. 1928, hefte 4, p. 169-200; 1928, pub. 1929, hefte 5, p. 262-98) *Title tr.:* Additions to and notes on Norwegian Coleoptera.

*Contains* a list of Norwegian beetles including species the distribution of which is essentially altered since its publication; 77 species and more noteworthy varieties new to the fauna of Norway (19 are new to Fennoscandia); and 28 species to be excluded from the Fennoscandian fauna. Many species are native to northern regions of Fennoscandia. For continuation see the author's *Tillaeg II-III*, 1930-35. Summary in English.

*Copy seen:* DA; MH-Z.

**24529. MÜNSTER, THOMAS GEORG, 1855-1938.** Tillaeg og bemaerkninger til Norges koleopterfauna, II-III. (Norsk entomologisk tidsskrift, 1930. Bd. 2, hefte 6, p. 353-57; (III) 1932, Bd. 3, hefte 1-2, p. 83-96; 1933, hefte 3, p. 163-64, hefte 4, p. 267-78; 1935, hefte 6, p. 370-79) *Title tr.:* Additions to and notes on Norwegian Coleoptera, II-III.

*Contains* a list of Norwegian beetles,

the distribution of which is essentially altered since the time of their description, including 60 species and more noteworthy varieties not hitherto found in Norway (14 are also new to Fennoscandia and 8 are new varieties and races); and 82 species to be excluded from the fauna of Norway. Many species in these works are native to northern regions of Norway. This paper is a continuation of the author's *Tillaeg*, 1927-29, q. v.

**Copy seen:** DA; MH-Z.

**24530. MÜNSTER, THOMAS GEORG. 1855-1938.** *Tillaeg til Norges coleopterfauna.* (Norsk entomologisk tidsskrift, 1922. Bd. 1, hefte 3, p. 118-35) **Title tr.:** Additions to coleopterous fauna of Norway.

*Contains* a list of 172 species of beetles hitherto unknown in Norway, including a few native to northern regions of the country. Summary in English.

**Copy seen:** DA; MH-Z.

**24531. MÜNSTER, THOMAS GEORG, 1855-1938.** *To nye Staphylinider (Coleopt.) fra det nordligste Norge.* (Norsk entomologisk tidsskrift, 1920, pub. 1921. Bd. 1, hefte 1, p. 55-58) **Title tr.:** Two new Staphylinidae (Coleopt.) from northernmost Norway.

*Contains* Latin diagnoses of two new species of rove beetles (Staphylinidae): *Philonthus finmarkicus* n. sp. native to Alten and Sydvaranger, Norway, Torne Lappmark, Swedish Lapland, and Kola Peninsula; and *Quedius (Sauridus) arcticus* n. sp. from northern Norway, Torne Lappmark, Sweden, and Kola Peninsula, also comparison with some related species.

**Copy seen:** DA; MH-Z.

**24532. MÜNSTER, THOMAS GEORG, 1855-1938.** *Verdens nordligste Cicindela.* (Norsk entomologisk tidsskrift, 1923, pub. 1924. Bd. 1, hefte 6, p. 283-288) **Title tr.:** Northernmost *Cicindela*.

*Contains* some notes on ecology and geographic distribution of three species of tiger beetles, *Cicindela campestris* found in Tromsø (69°39' N.), *C. silvatica* encountered near Svanvik in Sydvaranger (69°28' N.) and *C. maritima* spreading to Elvestrand, near Bossekop in Alten (69°58' N.). The latter species is described from arctic Siberia and as occurring also in Finnmark, Norway, and Kola Peninsula.

**24534. MUIRHEAD, E. E., and others.** *Experimental freezing shock; changes in body fluids and tissues.* (Archives of surgery, Dec. 1942. v. 45, p. 863-89, 15 fig., 3 tables) *Other authors:* C. T. Ashworth, L. A. Kregel, and J. M. Hill.

*Contains* a study on dogs whose entire hind limb was deeply frozen under anesthesia, and then thawed at room temperature. The greatest loss of plasma occurred 2.5 hours following the freeze; no generalized drainage to the visceral capillaries, nor interstitial and cellular changes were observed at this period, the only pathologic change being in the frozen limb and in the adrenal cortex. After four hours, loss of plasma decreased greatly, but generalized capillario-venous dilatation, and capillary hemorrhages, pulmonary edema, leucocytosis and cellular changes of the parenchymatous organs became evident. Passage of water into body cells was also indicated. Bibliography (42 items).

**24548. MURPHY, HUGH L.** Frost-bite: treatment by passive vascular exercise; report of cases. (American journal of surgery, 1937. n. s. v. 36, p. 370-75, 7 fig.)

Contains an account of treating frost-bite by "alternate negative and positive environmental pressure within a glass boot, into which the affected extremity is placed"; best results are obtained in early cases; restoration of circulatory balance, and epithelialization are quick. Bibliography (11 items).

**Copy seen:** DLC.

**24549. MURZAEV, P. M.** Mestorozhdeniia pirrotina ūzhnykh sklonov Khibinskogo massiva. (Leningrad. Tsentral'nyi nauchno-issledovatel'skii geologorazvedochnyi institut. Materialy; poleznye iskopaemye. Sbornik, 1935. no. 2, p. 83-93, 2 plates, fold. map, fold. diag.) **Title tr.:** Pyrrhotite deposits on the southern slopes of the Khibiny massif.

"Small accumulations of pyrrhotite occur in hornstones bordering the Khibina nepheline massif, Kola Peninsula. Their genesis is considered to be related to thermal pneumatolytic processes associated with emanations from the nepheline massif, rather than to contact metamorphic processes associated with intrusion of basic rocks which occur as sills within the metamorphosed sediments."—Geological Society of America, *Bibliography and index of geology*. Summary in English. **Copy seen:** DGS.

**24550. MUSACCHIA, XAVIER J.** The effect of elevated temperatures upon the tissue chemistry of the arctic sculpin, *Myoxocephalus quadricornis*. A terminal research report presented to the Board of Governors of the Arctic Institute of North America. AINA Project no. 16 (ONR-32) Saint Louis, 1951. 33 p., tables. Mimeographed.

Contains report of study made at the Arctic Research Institute at Point Barrow, Northern Alaska, aided by the Arctic Institute of North America and U. S. Office of Naval Research. Phospholipid, total cholesterol, cholesterol esters, total fatty acids and total lipids of the liver and skeletal muscle were determined both

in controls and in fish kept at a water temperature of 20° C. There was a marked increase in total cholesterol and cholesterol esters of the liver of the animals kept at 20°, suggesting that with changed temperature a major part of fat turnover in the liver is accomplished by the cholesterol esters. The skeletal muscle showed a decrease in phospholipid at 20° C., which was correlated to a decrease in spontaneous activity. Bibliography (27 items). **Copy seen:** DAL.

**24551. MUSACCHIA, XAVIER J., and CHARLES G. WILBER.** Studies on the biochemistry of *Citellus*. (Federation proceedings, Mar. 1951. v. 10, no. 1, pt. 1, [1] p.)

Contains note on *Citellus barrowensis*, an arctic squirrel, as part of work in progress on the biochemical characterization of arctic mammals. Blood sugar values are given for well-fed, starving and hibernating animals. Blood nitrogen was considerably higher than in man and other mammals; the amount of excreted nitrogen was not correspondingly high.

**Copy seen:** CaMAI.

**24552. MUSACCHIA, XAVIER J., and G. WILBER.** Studies on the biochemistry of the arctic ground squirrel. (Journal of mammalogy, Aug. 1952. v. 33, p. 356-62, tables)

Contains a study on various chemical constituents of *Citellus parryi barrowensis*, under different environmental conditions, in order to ascertain the effects of hibernation and of fasting. Blood and urinary nitrogen; blood sugar; lipids of the blood, liver and kidney were determined and data compared with those of other animals and of man. Determinations were made both on free-living animals, and on such kept in captivity for various periods. Bibliography (16 items). The specimens were collected from Teshekpuk Lake and Anaktuvuk Pass, Alaska.

**24561. NAGATA, TAKESI.** Development of a magnetic storm: The southward shifting of the auroral zone. (*Journal of geophysical research*, June 1950. v. 55, p. 127-42, illus., tables)

"Data from a number of observatories on the auroral and magnetic disturbance of April 30, 1933 (during the 2nd International Polar Year) are analyzed and

interpreted theoretically. The southward movement of the auroral zone shows a strong correlation with the hourly increase in intensity on a world-wide basis. This may be due to increase in intensity of the equatorial current-ring, (Störmer) not to the increase in intensity of the corpuscular stream. Other theories (of Chapman, Ferraro and of Alfén) are considered."—*Meteorological abstracts and bibliography*, Aug. 1950, v. 1, no. 8, p. 515.

"Frost action on roads includes the primary process of freezing, the secondary process of thawing, and the effects of freezing-and-thawing on pavements and their foundations. A review of the literature from 1765-1951 is summarized chronologically. The review, covering about 750 articles, appraises and abstracts the literature under the following headings: definition of frost action; the physical processes of soil freezing and thawing; magnitude of frost heave and increase in soil moisture; bearing value of ice and frozen soils; magnitude of reduction in load bearing capacity; factors influencing magnitude, rate, and nature of frost action and reduction in load carrying capacity; penetration of frost; design methods for preventing detrimental frost action; construction practices relative to frost action; permafrost; and hoar frost. The thermal properties of materials are covered in an appendix."—SIPRE.

**24584. NATVIG, LEIF REINHARDT, 1894-** . Entomologien ved Det Kongelige Frederiks Universitet, et bidrag til norsk entomologisk historie, I. Tidsrommet 1813-1907. (Norsk entomologisk tidsskrift, 1944, pub. 1943. Bd. 7, hefte 1-2, p. 1-73, illus., 18 ports.) *Title tr.*: Entomologists at the Royal Frederiks University, and contribution to the history of Norwegian entomology, I. Period 1813-1907.

*Contains* an historical review of the progress of the study of entomology until 1907, at the (present) University of Oslo, with biographical sketches of professors and entomologists (including collectors) connected with University, bibliographies of their works, data on travels and collections and portraits; bibliography (45 items). A list of 87 entomological collections deposited in Zoological Museum of the University is included. The travels and collections of some of the biographees concern the northern regions

of Norway, as do some of the works in their bibliographies.

**24593. NAUMOV, S. P., and N. P. LAVROV.** Biologiya promyslovykh zverei i ptits SSSR. Dopushecheno Upravleniem

uchebnymi zavedeniĭami Ministerstva zagotovok Soĭūza SSR v kachestve uchebnogo posobiĭa dlia zootekhnikumov. Pod redaktsiei A. M. Kolosova. Moskva, Gosudarstvennoe izd-vo tekhnicheskoi i ekonomicheskoi literatury po voprosam zagotovok, 1948. 357 p., illus., tables, maps. **Title tr.:** Biology of commercially important wild animals and birds of the U.S.S.R. Authorized by the Board of Education in the Department of Supplies of the U.S.S.R. as a textbook for zootechnical schools. Edited by A. M. Kolosov.

The book deals with wild mammals (p. 11-219) and birds (p. 220-323), and is organized in a taxonomic order. For each taxonomic group, including species, data are given on: morphology (size and color included); ecology; duration of pregnancy; size of litter; food and geographical distribution. In addition, the economic value, relative abundance and often numbers killed, are discussed. A final section (p. 324-52) deals with: general biological problems of the annual cycle, distribution and fluctuations in numbers; economic-geographic zones (tundra, forest, forest-steppe, semi-desert, and desert) of the U.S.S.R. Arctic species, both aquatic and terrestrial are included.

28-30 incl. table) *Title tr.*: Thermal soundings.

"Thermal soundings are made with a heating device at the base of a brass cylinder which melts the ice and facilitates the gradual penetration of the sounding cylinder into the ground. The heating device used during the expedition was a chromed Ni resistance wire, coiled to a cone, powered by a generator of 110 v. direct current of 10 kw. The conductors were 45-mm. thick cables. Soundings reached a depth of 50 m. after 30 hrs. Difficulties encountered are described. Improvements suggested include a heating element in the upper sounding body, resistances fit for air and water operation, and an increase to 220-440 v. to diminish the cable weight. Temperatures at 14, 25 and 36-m. depths are tabulated for the period Aug. 8-28."—SIPRE.

**24624. NEVSKIIĬ, V. V.** Pervoe puteshestvie Rossiian vokrug sveta. Moskva, Gos. izd-vo geograficheskoi literatury, 1951. 272 p., illus. tables, maps (1 fold.)

Contains an account and analysis of the first Russian round-the-world voyage made by I. F. Kruzenshtern and Ū. F. Lisianskii on the *Nadezhda* and *Neva* in 1803-1806, with an evaluation of its importance to Russian science. The itinerary included calls in the Russian possessions in the North Pacific region. Following areas were visited and are dealt with: Kamchatka (p. 144-54, 155), Kodiak Island and Novo-Arkhangelsk (now Sitka) (p. 158-74), and Sitka (now Baranof) Island (p. 174-83). Bibliography (around 100 items, nearly half of them, separately listed, by the participants of this expedition.)

**Copy seen:** DLC.

**24625. NEWBURGH, LOUIS HARRY, 1883-**, editor. Physiology of heat regulation and the science of clothing. Philadelphia, Saunders, 1949. xiii, 457 p. illus.

Prepared at the request of the Division of Medical Sciences, National Research Council, by a civilian committee under the auspices of several agencies of the U. S. government.

**Contents:** Pt. 1. Human response to the climatic environments.

1. WULSIN, F. R. Adaptations to climate among non-European peoples.
2. YAGLOU, C. P. Thermometry.
3. HARDY, J. D. Heat transfer.
4. BAZETT, H. C. The regulation of body temperatures.
5. ROBINSON, SID. Physiological adjustments to heat.
6. SPEALMAN, C. R. Physiologic adjustments to cold.
7. DAY, RICHARD. Regional heat loss.
8. HERRINGTON, L. P. The range of physiological response to climatic heat and cold.
9. YAGLOU, C. P. Indices of comfort.

Pt. 2. *Clothing a thermal barrier.*

10. FOURT, L., and M. HARRIS. Physical properties of clothing fabrics.

11. Forbes, W. H. *Laboratory and field studies.* General principles. (This is a recapitulation of the general principles mentioned in the preceding chapters of this monograph and serving as introduction to the following laboratory and field studies. Specifically it shows by examples what part each factor is likely to play in special situations. Fundamental points in heat loss; effect of clothing and various climatic conditions, including arctic, are brought forward).

BELDING, H. S. . . . Protection against dry cold.

SPEALMAN, C. R. . . . Wet cold.

SPEALMAN, C. R. . . . Water.

VAN DILLA, A. M., and others. . . . Special problems of hands.

12. SIPLE, P. A. . . . Clothing and climate.

Appendix: Forbes, W. H. Definitions, miscellaneous figures and conversion factors. (Presents information on basic concepts, measures and measuring units used in studies of climate, clothing, physiology (especially metabolisms), thermic problems, etc., including those of arctic nature).

This work includes also papers on Desert and Tropics not listed here. Each paper listed (excepting Forbes') appears in this Bibliography under its author's name. The whole work was previously listed as *Arctic Bibliography*, No. 12223.

Data on the nomad Skolt Lapps; the area they occupy in the Petsamo region (shown on map); their history, mode of life and reindeer; suggestions for the protecting and preserving of their culture. Includes many photographs, illustrative of their way of life and activities, with detailed annotations. Summary in German. *Copy seen:* DLC.

**24640. NICKUL, KARL.** The Finnish Lapps in wartime and after. (Man, 1950. v. 50, p. 57-60, 3 illus., map)

There are about 2,500 Lapps (.06 per cent of the total population) in Finland, and the Finns take good care of them. During Finland's winter war (1939-40) the Skolt Lapps were evacuated to the county of Tervola (between Kemi and Rovaniemi), and the Lapp fishermen of eastern Inari were moved to Muonio, on the Swedish frontier. The effects of the Second World War were more serious. The Germans held northern Finland and had to be driven out by force in the winter of 1944-45. The Lapps were swiftly evacuated to Sweden and to Pohjanmaa in northernmost Finland. In the spring and summer of 1945, the Lapps returned home to find only ruins left by the Germans and the pursuing Finnish forces. The health of the Lapps suffered very much from the war and evacuation: tuberculosis, venereal diseases, and alcoholism increased definitely. The Lapps in military service had casualties amounting 2 per cent of their population. The stock of reindeer was seriously depleted: in 1938 the Lapps owned 47,000 head, in 1946 about 26,000. Post-war relief came from U.N.R.R.A. (-U.S.A.), England, and Sweden. The Suenjel Skolts had to be resettled in northeastern Inari, because their territory fell to the U.S.S.R. The Finnish government built houses for the Skolts spending about 60 million Finnish marks. The Lapps of Finland are not a dying race.

*Map* shows evacuation areas for Finnish Lapps (1939-45) and the Skolts' new pasture lands (1947).

**24641. NICKUL, KARL.** Petsamon eteläosan koltankieliset paikannimet kartografiselta kannalta. Helsinki, 1934. 81 p., 2 fold. maps. (Fennia, 60:1) *Title tr.:* Skolt language place names in southern Petsamo from a cartographic viewpoint.

Alphabetical list of 1543 place names with some annotations, and locations shown on map. Prefatory remarks (p. 5-31) on the names as cultural indicators, etc. Summary in German.

*Copy seen:* DLC.

**24642. NICKUL, KARL.** Petsamon tutkimus ja Suomen Maantieteellinen Seura. (Terra, 1938. 50: 1-2, p. 154-60) *Title tr.:* The scientific exploration of Petsamo and the Geographical Society of Finland.

Discussion of the role of the Geographical Society of Finland in the investigation of the Petsamo area, 11,000 sq. km., ceded to Finland in 1920, then virtually unknown territory excepting the coastal region. Author notes briefly 19th century work of Finnish scientists in Kola Peninsula and their visits to Petsamo. Government- and private institution-sponsored work there after 1920; the Geographical Society's proposal in 1926 to coordinate this work under direction of a Petsamo Committee drawn from several learned societies. The committee's program of investigations 1927-30 on a state grant, and its published results are indicated, also lines along which further investigations (sociological and ethnological) could be made in future. Summary in English.

**Copy seen:** DLC.

**24643. NICKUL, KARL.** Suenjel, Kolt-tain maa. (Terra, 1933. 45:1, p. 68-85, illus., maps) **Title tr.:** Suenjel, the land of the Skolt Lapps.

Contains description of the natural characteristics of this area drained by the Lutto (about 68°30'-50' N. 30°-31° 25' E.); the nomadic Skolt Lapps, their persisting traditional culture; their new winter village with school, government-sponsored at Suenjel (Finnish: Suonikylä, Russian: Songel'sk); their reindeer and fishing economy and the nomadic way of life it entails. Author notes probable effects of the winter village in modifying the traditional social organization and nomadic customs of these Lapps.

Summary of text and notes to ten photographic illus. in English.

*Contains* a review of the more important Lapp dictionaries since 1780, including plans for author's own dictionary then in progress (see *Arctic Bibliography*, No. 12272).

*Copy seen:* DLC; InU.

**24655. NIELSEN, KONRAD, 1875- .** Lappisches Wörterbuch nach den Dialekten von Polmak, Karasjok und Kautokeino. Heft I. Helsingfors, 1913. 56 p. (Suomalais-ugrilainen seura. Lexica Societatis Fennougricae I) *Title tr.:* Lapp dictionary according to the dialects of Polmak, Karasjok, and Kautokeino.

*Contains* an explanation of transcription and arrangement (on the covers), and Lappish words starting with a, ä, and b (to "bad'dadäd'dät"). This is a German edition (no more published) of the first part of the author's *Lappisk ordbok*, 1932-1938 (see *Arctic Bibliography*, No. 12272).

*Copy seen:* InU.

**24656. NIELSEN, KONRAD, 1875- .** Lappiske studier. Oslo, Brøggers, 1945. 6 p. 1., 231 p. illus. port. (Studia Septentrionalia, v. 1) *Title tr.:* Lapp studies.

*Contains* a selection of 15 of Nielsen's minor papers previously published (in Finnish, Norwegian, Hungarian, German or English) in various periodicals. The first two articles (in Finnish) deal with Lapp dialects: a survey of investigations of Lapp dialects prior to 1902 (p. 1-13) and (p. 14-36) an account of author's stay in Finnmark in 1903 with the chief results of his investigations. A third dialect study (in Norwegian, p. 143-61) concerns the mountain dialect in Varanger, and is based upon material collected in 1926. Two studies on loan words deal with: (one, p. 57-64) a group of primitive Scandinavian trisyllabic words, which have become bi-syllabic in Lapp; and (the other, p. 178-84) a group of words from the terminology of the reindeer and its herding. Further there are two studies on place names (p. 84-104, 115-42) and four philological papers dealing with various themes: the origin of attributive forms (in English, p. 199-209), the third person singular pres. (in German, p. 105-114), the relatively long stem-consonant in a special group of verbs (in Hungarian, p. 210-18), and the partitive in Finnmark-Lapp (p. 162-77). An article dealing with the history of Lapp lexicography (p. 185-98) gives detailed information regarding author's own works. A survey is given (in Norwegian, p. 65-84) of scientific investigation of the Lapps as a whole. Two ethno-linguistic papers investigate: the origin of the Lapp turf hut (in Norwegian, p. 37-56, 8 illus.), and the Finnmark-Lapp *lainas*, a linguistic contribution to the history of the Lapp shoe (in English, p. 219-28).

*Copy seen:* DLC; InU.

**Copy seen:** DLC; InU.

**24658. NIELSEN, KONRAD, 1875-** . The use of pronominal adverbs of place with the termination *-ggo* in Finnmark Lapp. (Finnisch-ugrische Forschungen, 1946. Bd. 29, p. 32-36)

Adverbs of this category show a peculiar duality of meaning, signifying partly *along which way* the movement goes, and partly *where* a certain object is placed.

**Copy seen:** DLC; InU.

**24659. NIELSEN, KONRAD, 1875-** . Die wissenschaftliche Bedeutung des Lappischen. (Finnisch-ugrische Forschungen, 1913. Bd. 13, p. 186-206) **Title tr.:** The scientific importance of the Lapp language.

*Contains* remarks on the importance of Lapp phonetics to the linguistic research; the stage shift in the Lapp language and its importance to the Finno-Ugric linguistics. The Lapp language of today is close to the Finnish; many place names and Lapp words connected with reindeer breeding, however, are unknown to any other Finno-Ugric language and they are considered as belonging to the "proto Lappish" language (Wiklund). Lapp loanwords from the old Nordic, Germanic and Baltic languages preserved very old forms and mythological ideas. "Proto Lappish" was probably a Samoyedic dialect which the Lapps brought together with their technique of reindeer breeding from the East to Fennoscandia.

**24667. NIKIFOROV, A. I.** Chukotskii skazochnik i russkaya skazka. (*In:* Akademika nauk SSSR. Institut étnografii. Pamfati V. G. Bogoraza, 1865-1936, pub. 1937, p. 207-212) *Title tr.:* Chukchi storyteller, and Russian fairy tale.

In spite of the Chukchis' contact with the Russians since the 17th century, less than five percent of Chukchi fairy tales are borrowed from the Russian, the rest being typically Paleo-Asiatic, and the borrowed Russian material strongly modified. The author offers as an example a tale, a literary vignette, where a kind of protest against borrowing appears, as an act of dissimulation instead of assimilation.

The geography of the polar regions, consisting of a general characterization of polar nature, by Otto Nordenskjöld, and, a regional geography of the Arctic and the Antarctic, by Ludwig Mecking. New York, American Geographical Society, 1928 [i. e. 1950]

vi, 359 p., illus., maps. (American Geographical Society of New York. Special publication no. 8) Originally published by the Society in 1928, "reproduced by the Intelligence Division, Department of the Army. October 1947," and reissued by the Society in 1950. Pt. 1 is a translation by Ernst Antevs of Otto Nordenskjöld's *Polarnaturen*, Stockholm, 1918 (xii, 143 p., illus. copy at MH, NN); pt. 2 is a translation by W. L. G. Joerg and Marion Hale of Ludwig Mecking's *Die Polarländer*, Leipzig, 1925 (see *Arctic Bibliography*, No. 11164).

A comprehensive, authoritative monograph. Part I, *Polar nature: a general characterization*, has chapters on: climate, ice, and the causes of polar conditions; soils and land forms; vegetation and animal life; limits and natural divisions of the arctic areas. Bibliography (24 items).

Pt. II, *The polar regions, a regional geography*, has sections on the region as a whole (p. 95-125): its exploration, structure — horizontal and vertical, surface cover, climate, plant cover, animal life, man. Then follows (p. 126-281) a description of the individual regions of the Arctic: the arctic seas, Svalbard, Russian arctic islands and mainland, Bering Sea, Alaska, Canadian mainland and islands, Greenland, Jan Mayen. Finally (p. 282-325) the Antarctic is treated similarly and an extensive bibliography added.

**24699. NORDMAN, ADOLF FR.** *Sophronia gelidella* n. sp. from Kilpisjärvi in Finnish Lapland. (Lepidoptera, Gelechiidae). (Notulae entomologicae, 1941. v. 21, no. 1, p. 21-22, illus.)

**Contains** a diagnosis of a new moth, *Sophronia gelidella* n. sp. found in Kilpisjärvi, in the Enontekis region of Finnish Lapland (Lapponia enontekiensis); male and female specimens.

**Copy seen:** DLC; MH-Z.

**24700. NORDMAN, ADOLF FR.** En sydlig fyndort för orthopteren *Podisma frigida* Boh. (Notulae entomologicae, 1942. v. 22, no. 3-4, p. 174-75) **Title tr.:** A southerly locality for an orthopteran, *Podisma frigida* Boh.

**Contains** a survey of geographic distribution of *Podisma frigida*, an orthopteran known from Finnish and Russian Lapland, Obdorsk region in western Siberia, and Verkhoyansk in eastern Siberia, found by M. Ivashintsev in Kuolemajärvi, Russian Karelia, a southerly location for this arctic species.

**Copy seen:** DLC; MH-Z.

**24701. NORDMAN, ADOLF FR.** Till kännedomen om utvecklingsstadierna hos nordiska lepidoptera. (Notulae entomologicae, 1942. v. 22, no. 1-2, p. 87-96; no. 3-4, p. 97) **Title tr.:** A contribution to the knowledge of developmental stages of northern lepidopters.

**Contains** descriptive notes on larvae and pupae of seven species of northern lepidopters, occurring in Finnish and Swedish Lapland, and data on their biology; supplementary to the author's *Bidrag till kännedomen om Utsjoki lepidoptera*, 1941, q. v.

**Copy seen:** DLC; MH-Z.

**24702. NORDMAN, ADOLF FR.** *Tinagma dryadis* Sign. och *Adela rufifrontella* Ir. från Le Kilpisjärvi. (Notulae entomologicae, 1938. v. 18, no. 3, p. 116) **Title tr.:** *Tinagma dryadis* Sign. and *Adela rufifrontella* Ir. from Kilpisjärvi, Lapponia Enontekiensis.

Contains a report of the find of two lepidoptera, *Tinagma dryadis* and *Adela rufifrontella* in the Kilpisjärvi region of Finnish Lapland, with data on habitat; the latter species is also known from Petsamo and Kola Peninsula.

**Copy seen:** DLC; MH-Z.

**24703. NORDMANN, ALEXANDER von, 1803-1866.** Erstes Verzeichniss der in Finnland und Lappland bisher gefundenen Spinnen, Aranea. Helsingfors, 1862. 39 p. (Bidrag till Finlands naturkännedom, etnografi och statistik, 1863. Häft. 8) **Title tr.:** First list of spiders (Aranea) found in Finland and Lapland.

140 species belonging to 6 families are listed and localities (including many northern ones) are given.

**Copy seen:** DLC.

**24704. NORDMANN, ARTHUR von.** Uebersicht der bis jetzt in Finnland und Lappland vorgekommenen Voegelarten. (Moskovskoe obshchestvo, ispytatelei prirody. Büfleten', 1860. t. 38, no. 1, p. 1-54) **Title tr.:** A survey of birds hitherto known from Finland and Lapland.

Contains a systematic list of birds collected or observed by the author during his trips to the Muonioniska region of Finnish Lapland in 1853, and to Karelia and Solovetskiye Islands in the White Sea; with data on geographic distribution in Finland, Scandinavia and adjoining regions of Russia; includes many species native to Lapland and Kola Peninsula.

**Copy seen:** DLC; MH-A.

**24705. NORDQVIST, OSCAR FRITHIOF, 1858-** Die Calaniden Finlands. (Bidrag till kännedom af Finlands natur och folk, 1888. Heft 47, p. 191-275, plates 1-10) **Title tr.:** Calanidae of Finland.

Contains data on the distribution of crustaceans of the fam. Calanidae in the Baltic Sea and in 29 lakes of Finland (see table on p. 211-12), including 18 in the North (Kuusamo). Thirteen species are described with synonymy and critical notes; bibliography (37 items).

**24706. NORDQVIST, OSCAR FRITHIOF, 1858-** Laxens uppstigande i Finlands och norra Sveriges elfvar. Statistiskt bidrag till laxens biologi. Helsingfors, 1904-1905. 58 p., 27 fold. plates (tables, diagrs.). (Fennia, 22:2) **Title tr.:** The ascent of salmon into the Rivers of Finland and northern Sweden. Statistical contribution to the biology of the salmon.

Report on observations from several stations, on the connection between air and water temperatures, water level, wind and sky, and the salmon run. None of the above factors was found to have any direct effect except the water level; the amount of fish caught increasing with the rise of the water. The problem of homing of salmon in the Baltic is also discussed.

**24730. NORTHWEST TERRITORIES. LAWS, REGULATIONS, etc.** New game regulations in the Northwest Territories, 1949. (Polar record, July 1950. v. 5, no. 40, p. 627-30)

*Contains* a short summary of "An Ordinance Respecting the Preservation of Game in the Northwest Territory" which came into effect on July 1, 1949 on the repeal of the "Northwest Game Act"; includes: prohibitions and regulations on certain firearms; use of traps; waste of game and furs; sale and use of caribou and moose meat, etc.; game preserves and sanctuaries; closed seasons; licenses and certificates; trade and traffic in game; fur farms, etc.; administration and enforcement.

*Copy seen:* DLC.

**24731. NORTHWEST TERRITORIES. LAWS, REGULATIONS, etc.** New ordinances affecting scientists and explorers in the Northwest Territories, 1949. (Polar record, July 1950. v. 5, no. 40, p. 630-33)

*Contains* the text of two ordinances, which supersede similar earlier regulations of June 1926: (1) The Scientists and Explorers Ordinance deals with licenses and conditions for exploration; submission of programs, logs, results, reports, etc., of explorations; penalties, etc. (2) Archeological Sites Ordinance, dealing with: definitions, permits to excavate, collect, export, etc. antiquities; reports and other information to be furnished to the authorities; submission of

specimens, etc., for examination of authorities; violations and fines.

**Copy seen:** DLC.

**24732. NORTHWEST TERRITORIES. LAWS, REGULATIONS, etc.** Ordinances of the Northwest Territories, passed by the Northwest Territories Council in the year 1949. Ottawa, King's Printer, 1950. 196 p.

*Contains* text of 34 statutes mostly relating to civil life and property in the area, but including several of special interest to explorers and scientists, e. g. laws relating to archeological sites, fur export, game preservation, scientists and explorers, public health, etc.

A consolidation of the ordinances passed from the time of the Territory's administrative reorganization of 1905 to 1930 was published in 1931 (see *Arctic Bibliography*, No. 12556). On publication of statutes passed 1931-48 information is in *Arctic Bibliography*, v. 5.

**Copy seen:** CaMAI.

**24733. NORTHWEST TERRITORIES. LAWS, REGULATIONS, etc.** Ordinances of the Northwest Territories, passed by the Northwest Territories Council in the year 1952. Ottawa, King's Printer, 1952. Mimeographed, each chapter paged individually.

*Contains* chapters 1-19, assented to July 10, 1952. Notable are chap. 18, The School Ordinance, (27 l.+forms A-I) and chap. 20, Workman's Compensation Ordinance (20 l.+schedule 1-2)

**24734. NORWAY. METEOROLOGISKE INSTITUTT.** Nedbøren i Norge 1895-1943: I, Middelverder og maksima; II, Nedbørhøyder for måneder, årstider og år. Oslo, Aschehoug, 1949. 2 pt.: xxvii, 114 p. (tables), 16 maps; 302 p. (tables). Text in Norwegian and English. **Title tr.:** Precipitation in Norway 1895-1943: I, Mean and maximum values; II, Monthly, seasonal and annual amounts of precipitation.

*Contains* (in pt. I) data on the precipitation in Norway from 1895 to 1943 collected from 825 observation stations and presented in the form of tables and maps. Approx. 100 of the stations are north of the Arctic Circle. Mean monthly and annual amounts of precipitation are related to the normal period 1901-1930. Data are given on maximum amounts and intensity of, and on mean monthly and annual days with precipitation. In

pt. 2 are tabular data of monthly seasonal and annual amounts of precipitation presented station-by-station.

**Copy seen:** DLC.

**24735. NORWAY. METEOROLOGISKE INSTITUTT.** Nedbøriakttagelser i Norge, årgang 53, 1947. Oslo, Aschehoug, 1950. 54 p., fold. chart, tables **Title tr.:** Precipitation observations in Norway, 53d year, 1947.

"Rainfall data for Norway has been published in yearbooks for the period 1895—date, but with some irregularities. Summarized data for 1895-1943 and "normal" data for 1901-30 were published in 1949. In this volume, the daily precipitation data for about 500 stations in Norway are tabulated for the year 1947. Snow depth in cm. is tabulated for each 5 day period during the months from Oct.-May, for about 50 stations. Monthly and annual summaries of precipitation and snow depth are given by districts for each station. Percentage of "normal" for each month and the year is also given for 55 stations and, finally, a large colored chart shows actual precipitation (mm.) at each station and percent of normal (1901-30) for year 1947. Variation was from <50% in SE to >130% in N."—*Meteorological abstracts and bibliography*, Nov. 1951. v. 2, no. 11, p. 883. About 25 per cent of the stations reporting are located north of the Arctic Circle.

**Copy seen:** DWB.

**24736. NORWAY. METEOROLOGISKE INSTITUTT.** Norsk meteorologisk årbok, 1949. Oslo, 1951. 141 p., tables **Title tr.:** Norwegian meteorological yearbook.

Text in English and Norwegian. "Chart shows location of 206 stations operating in Norway and arctic islands during 1949. Table gives exact data as to location, height of instruments and time of observations, names of observers, etc. Detailed observational data, in some cases bi-hourly and in others thrice-daily, are given for each element for 150 stations. Monthly and annual summaries, departures from the normal period (1901-30), sea surface temperatures (12 stations), actual observations for Arctic stations for 1948, and for Oslo, Bergen, Trondheim and Tromsø for 1949, and data from recording instruments at Oslo (Bindern) for 1949 (pressure, temperature, precipitation, wind, relative humidity) are included in this model year-book."—*Meteorological abstracts and bib-*

liography, Nov. 1951. v. 2, no. 11, p. 883. For earlier years (1867-1948) see *Arctic Bibliography*, No. 12563. Isfjord Radio, Hopen, Bjørnøya, Jan Mayen, and Myggbukta (East Greenland), report regularly, as well as the northern mainland stations. **Copy seen:** DWB.

**24737. NORWAY. NORSK POLARINSTITUTT.** Norwegische Expeditionen im Jahre 1948-49. (Polarforschung, 1948-1949, pub. 1950. Bd. 2, Jahrg. 18, p. 37-38, i. e. p. 233-34; Jahrg. 19, p. 282-83) **Title tr.:** Norwegian expeditions in 1948-49.

Brief notes on the work of parties on West Spitsbergen and in Svalbard waters, including hydrographic surveys, setting up of beacons, geologic research, ornithologic studies (which incidentally established the certainty of a musk-ox population), botanical and glaciological investigations; also photogrammetric work on Hopen. **Copy seen:** DGS.

**24738. NORWAY. SJØKARTVERKET.** Tidevanntabeller; tide tables for den norske kyst. 12. Årgang. Oslo, 1949. 132 p. (12th edition).

Daily tables, referred to nine standard ports including five above the Arctic Circle: Vardø, Hammerfest, Tromsø, Narvik, and Bodø, with harmonic tidal constants. **File seen:** DLC.

**NORWEGIAN GEOGRAPHIC SURVEY,** see Norway. Norges geografiske opmåling.

**24739. NOR' WEST MINER,** Edmonton, Alta., 1933?-1950. By-monthly edited by F. S. Wright, ceased publication with v. 18, no. 5, Sept-Oct. 1950. "Devoted to development descriptive of the Northwest Territories, northern British Columbia and the Yukon—along the trail of the Alaska Highway."

Contained articles on oil and resources, transport, administration, advertisements of services, etc.

**File seen:** CaMAI (1948-50).

**24740. NOR' WEST MINER.** Settlements in the Northwest Territories. (Nor'west miner, Jan.-Feb. 1950. v. 18, no. 1, p. 12-15)

Alphabetical list of 80 populated places of Mackenzie, Keewatin and Franklin Districts with brief note on status (trading post, missions, police or other governmental station, post office, radio or meteorological station, etc.).

**Copy seen:** CaMAI.

**24741. NOVAKOVSKIĬ, A. IŪ.** Havok of the Okhotsk fisheries. (Russian Far East; economic monthly (Tokyo) Oct. 1920. no. 1, p. 40-42) Issued also in Russian (with title: *Razgrom Okhotskoĭ rybopromyshlennosti*) in the first (Russian) section of this magazine, p. 51-52.

Note on destruction by the Bolsheviks of fishing and fish-manufacturing plants on the northern and western coasts of the Sea of Okhotsk, with statistical data on catch, taxes paid and number of plants in 1910-13, and 1919.

**Copy seen:** DGS.

**24742. NOVAKOWSKY, STANISLAUS.** Arctic or Siberian hysteria as a reflex of the geographic environment. (Ecology, Apr. 1924. v. 5, p. 113-27)

On the basis of study of the literature on the subject, author suggests *Hysteria siberica* as a name for the nervous disorder; enumerates seventeen symptoms; disassociates the hysteria from neurasthenia and epilepsy; categorizes its causes as: the natives' concept of evil spirits, heredity, racial differences, and geographical environment; gives an analysis of the latter, including climate, length of winter darkness, monotony of season and lack of variability. Bibliography (20 items). **Copy seen:** DGS.

**24743. NOVIKOV, G. A.** Elovye lesa Kol'skogo poluostrova kak sreda obitaniia mlekoopitaushchikh i ptits; opyt ekologicheskogo analiza landshtafta. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1952. t. 84, no. 2, p. 154-65) **Title tr.:** The fir forests of the Kola Peninsula as habitats of mammals and birds; attempt at an ecological analysis of the landscape.

*Contains* a study based on field work done during 1937-1939, with sections on the general ecological conditions of these forests, including climate, species of mammals and birds found in them, conditions of shelter, food resources, distribution of the mammals and birds according to biotopes and seasons, feeding, etc. These mammals and birds are considered to represent a specific complex, differing from others surrounding it, and from those of fir forests of lower latitudes. Bibliography (27 items).

**Copy seen:** DLC.

**24744. NOVIKOV, G. A.** Sutochnaia zhizn' lesnykh ptits v Subarktike. (Zoologicheskii zhurnal, 1949. t. 28, vyp. 5, p. 461-70) **Title tr.:** Day and night life of forest birds in subarctic regions.

*Contains* the results of the author's study in 1937-39, of the biology and ecology of forest birds in the Lapland sanctuary, Kola Peninsula; with tabulated data for various months and comparison with other subarctic regions.

**Copy seen:** DLC; MH-Z.

**24745. NOVIKOV, P. A.** Akademik S. P. Krashennnikov kak pervyi issledovatel' zhivotnogo mira Kamchatki. (Akademiia nauk SSSR. Institut istorii estestvoznaniia. Trudy, 1949. t. 3, p. 262-96) **Title tr.:** Academician S. P. Krashennnikov as the first explorer of the fauna of the Kamchatka Peninsula.

*Contains* a biography of Krashennnikov and data on his exploration of Kamchatka (Oct. 22, 1737-May 28, 1741) as a member of Bering's second expedition, with special reference to his role in the study of the peninsula's fauna. Includes lists of mammals, birds and fishes (130 specimens in all), and data on their biology and ecology, extracted from chapters VI-X of his *Opisanie zemli Kamchatki*, 1755 (Arctic Bibliography, No. 9265) and a list of his zoological papers (incl. manuscripts) p. 272-78.

**Copy seen:** MH.

**24746. NOVITSKIĬ, GRIGORIĬ IL'ICH.** Kratkoe opisanie o narodnĕ ostiâskom,

v. 1715 gody. Izdal L. Malkov. S. Peterburg, Tip. V. S. Balasheva, 1884, vi, 116 p. **Title tr.:** A brief description of the Ostyak people in 1715. Edited by L. Malkov.

*Contains* description of Siberia, its geography, inhabitants, government and Russian conquest of the area; the life and habits of the "civil population and others"; paganism, the "beginning of religion" and eradication of paganism. The Ostyaks are treated in some detail in regard to their life and customs; birth and name-giving, food and tobacco smoking, dwellings, implements and utensils, reindeer and dog sledges, clothing; sex attitudes and marriage; religion and idols (*sheitan*), mourning customs, taking an oath; conversion to christianity. The text is printed from an apparently unfinished manuscript preserved in Tobolsk. Very little is known about Novitskii who apparently was in Siberia as a deportee. His account was previously published (without acknowledgement of its real authorship) by Johan Bernhard Müller as *Leben und Gewohnheiten der Ostaken* (Life and customs of Ostyaks), Berlin, 1720, 75 p. (copy at MH). It was also translated into French, *Les mœurs et usages des ostiackes*, and published in I. F. Bernard's *Recueil de voyages du Nord*, 1725-38, t. 8, p. 375-429 (copy in DLC).

**24747. NOVOSELOV, N. S., and others.** Lesa i lesnaia promyshlennost' DVK. (Akademiia nauk SSSR. Dal'nevostochnyi filial, Vladivostok. Vestnik, 1938. no. 30 (3), p. 33-54, illus., plate) *Other authors:* Kozhevnikov, F. A., and S. N. Moiseenko. **Title tr.:** Forests and lumber industry of the Far Eastern Region.

*Contains* sections on (1) forests of the Far East; (2) utilization of the forest of the region; (3) lumbering at the present time; lumber-cutting centres, mechanical equipments, production; (4) forest management; (5) forest industry. Includes data on the forests and various commercial trees of the Kamchatka Peninsula and Okhotsk region, although the forest industry is concentrated in the Amur and Ussuri regions of the southern Far East.

**Copy seen:** DLC; MH-A.

**24748. NOVOZHILOV, N. I.** Ob ostatkakh neizvestnogo pozvonochnogo v permskikh otlozheniiaakh ūzhnogo berega Khatangskogo zaliva. (Akademiia nauk SSSR. Doklady, 1948. t. 59, p. 743-46, illus.) **Title tr.:** Concerning remains of

an unknown vertebrate from the Permian deposits on the south shore of Khatanga Bay.

Description of "vertebrate remains from Permian deposits of the south shore of Khatanga Bay" (about 73°35' N. 108° E.); with conclusion "that they probably are reptilian," and constitute a new genus and species *Estheriophagus chatangensis*.—Geological Society of America. Bibliography and index of geology. **Copy seen:** DLC.

**24749. NOVYE MATERIALY O NARODNOSTIAKH SEVERA.** (Akademii nauk SSSR. Dal'nevostochnyi filial, Vladivostok. Vestnik, 1932, no. 3-4, p. 80) **Title tr.:** New materials on the peoples of the Asiatic North.

Summary account of a study of the anthropology, ethnology and ethnography of the Lamuts and Orochi (Tungus or Evenki) of the Okhotsk coastal region carried out in 1931-32 by V. I. and M. G. Levin of the Moscow Institute of Anthropology. **Copy seen:** DLC; MH-A.

**24750. NOZIKOV, NIKOLAI NIKOLAEVICH.** Russkie krugosvetnye moreplavatel'i. Pod redaktsiei i v vstupitel'noi stat'se M. A. Sergeeva. Izd-ie vtoroe. Moskva, Voennoe izd-vo ministerstva vooruzhennykh sil soiuza SSR, 1947. 294 p. illus., 2 fold. maps. **Title tr.:** Russian round-the-world navigators.

Contains a semi-popular account of the life and exploits of: I. F. Kruzenshtern and I. F. Lisianskii, their voyage around the world on the *Nadezhda* and *Neva* (1803-1806), which included calls at Kamchatka and Alaska; V. M. Golovnin and his cruise on the *Diana* (1807-1813) and *Kamchatka* (1817-19) with visits to Kamchatka, the Aleutians and Alaska; F. P. Litke and his round-the-world cruise on the *Seniavin* and *Moller* (1826-29), which, like the two previous ones, included the Russian lands bordering Bering Sea and the North Pacific. The account contains descriptions of the places visited, their history, geography, climate, flora, fauna, population, etc. The first edition of this book appeared in 1941. Bibliography (58 items).

Arkhangel'sk, 1925. 2 pt. 97, 65 p. tables, diagrs. incl. fold. **Title tr.:** Control figures on the national economy of the Northeastern province for five years.

Though the area concerned is not arctic, its fishing industry work is based

on the arctic seas and (especially) the White Sea. **Copy seen:** DLC.

**24774. OBRUCHEV, D. V.** Devonian fishes of Siberia and Central Asia. (Akademiā nauk SSSR. Comptes rendus (Doklady), 1940. nouv. ser., v. 27, no. 8, p. 889-92, illus.)

**A brief review of all the available materials and data on Devonian fishes of Siberia and Central Asia and description of specimens from a few localities including Taymyr Peninsula, Kureyka and Bakhta River basins, Krasnoyarsk-Kansk region, etc. **Copy seen:** DLC.**

**24775. OBRUCHEV, SERGEĪ VLADI-MIROVICH, 1891-** . Geomorfologicheskoe issledovanie r. Kolymy v 1929 g. (Akademiā nauk SSSR. Izvestiā, seriā 7. Otdelenie fiziko-matematicheskikh nauk, 1930, no. 6, p. 559-84, fold. map) **Title tr.:** Geomorphological investigation of the Kolyma River in 1929.

**Contains** a general account of the exploration of the Kolyma River region in eastern Siberia, by the Kolyma geomorphological party of the Yakut Expedition of the Academy of Sciences, in the summer of 1929. The work included a geomorphological survey of the southeastern Cherskiy Range area, (61°-66° N. 144°-154° E.), with a hypsometric study, a geological outline and a detailed survey of the rivers of this area (the upper Kolyma and its left tributaries), their course, length, shores, watersheds, etc. Considerable deviations from earlier surveys were found. A schematic map of the upper Kolyma as prepared by the party's geodesist, K. A. Salishchev, is given.

**24782. OBRUCHEV, VLADIMIR AFANAS'EVICH, 1863-** . Zemlia Sannikova. Moskva, Gos. izd-vo geograficheskoi literatury, 1951. 294 p. illus., map. *Title tr.*: Sannikov Land.

First published in 1924.

Contains a fictional story of an expedition to Sannikov Land at the beginning

of the 20th century, by a party of political exiles in the Indigirka region, led by a scientist interested in the Arctic. Some actual islands, as well as the real conditions and difficulties of exploration and travel in the East Siberian Sea are described according to the scientific knowledge of the time when the book was written. An appendix (p. 283-92) gives a factual account of the repeated searches for the island *Ākov Sannikov* claimed to have sighted northeast of the New Siberian Islands about 1805-1806, in which he was confirmed by some later explorers. The author advances some theories about the failure to find the island, the existence of which, he suggests is not precluded. *Copy seen:* CaMAI.

**24783. OBRUCHEV, VLADIMIR AFANAS'EVICH, 1863-** . *Zolotonosnye raiony Ākutii. (In: Akademiā nauk SSSR, Leningrad. Poleznye iskopaemye i transportnā problema Ākutii, 1930. p. 3-32, fold. map) Title tr.: The gold fields of Yakutia.*

Characteristics of Yakut ASSR as a gold-producing province; historical summary of gold prospecting and mining in the area; its general geological outlines; division of the gold-producing areas into nine districts shown on fold. map, scale 1:12,600,000: (1) in the upper basin of the Olekma River; (2-6) in the upper basin of the Aldan River (especially in the Timpton River valley about 57° N. 126° E.); (7) in the central basin of Vilyuy River; (8) in the upper basin of the Indigirka River; and (9) in the upper basin of the Kolyma River. Statistics of gold production for each district, indicating that the richest gold deposits (developed by the All-Union State Trust "Aldanzoloto") with gold production to 1927 of over 20,000 kg., are situated in the basin of the Timpton River (right tributary of the Aldan, about 58°46' N. 127°06' E.). Prospects for the gold mining industry. Bibliography (4 items).

**24784. O'BRYAN, DERIC.** Archeological investigations on Mill Island, 1951. (Arctic circular, Mar. 1952. v. 5, no. 3, p. 28-29)

*Contains* the log, and report on the excavation by the author and Daniel von H. Rogers of an old Eskimo winter house on Mill Island in Hudson Strait (63°59' N. 78° W.) of which a preliminary study had been made in 1927. 350 artifacts representative of Dorset Culture were

collected, including harpoon heads, knife handles, sledge runners, toys and ornaments, all of ivory, bone or antler; stone tools and implements; some wooden and leather implements preserved in the permafrost. These together with refuse, appear to represent a 2-3 year sojourn by two families of late Dorset Eskimos who had had some contact with advancing Thule culture. Collecting of botanical and geological specimens and map work is noted.

On the basis of previous investigations author describes the bedrock in the so-called "Lapland triangle," the area (about 66°-67°30' N. 24°-25° E.) between lower Tornio and Kemi Rivers in northern

Finland. Noting moraine drift as the most common Quaternary deposit of the area, he classifies petrographic composition of the moraine deposit into types comparable with the rock ground types. These types form habitats of different values for vegetation and the characteristic vegetation of each is determined.

The formation and composition of ground water is discussed and its effect on vegetation, particularly the fact that its mineral components favor the development of *Saxifraga hirculus* birch bogs, termed the most luxuriant peat bogs. Author comments on Finnish localities (in the "Lapland triangle" and elsewhere) of such peat bogs. Bibliography (15 items). Summary in English.

**24811. OKLADNIKOV, ALEKSEĬ PA-VLOVICH.** Iz istorii obshchestvennykh otnoshenii u Yakutov v XVII. veke. (Legendy o Tygyne i istoricheskaiia del'svitel'nost'). (Sovetskaiia etnografiia, 1949. no. 2, p. 98-118, map) **Title tr.:** History of relations among Yakuts in the 17th century. (Legends of Tygyn and historical facts).

*Contains* an historical sketch of the Yakuts of the 16-17th century especially of the reign of the "Yakut Czar" Tygyn. Based on native legends and on notes of a contemporary, I. A. Lindeman, it includes the reign of Tygyn's father and deals largely with the wars which he waged against the neighboring Yakut tribes. At the end of these campaigns, Tygyn extended his rule over the Yakut tribes along the lower Lena.

**24812. OKLADNIKOV, ALEKSEĬ PA-VLOVICH.** K voprosu o naznachenii neoliticheskikh kamennykh ryb iz Sibiri. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Materialy i issledovaniia po arkheologii SSSR, 1941. no. 2, p. 193-202, illus.) **Title tr.:** On the question of the purpose of the neolithic stone fish in Siberia.

*Contains* discussion on the naturalistic stone-carvings of fish, found in burial places and neolithic sites in Siberia and North America. Formerly these stone-carvings were considered as objects of cult; the author, however, attempts to prove them to be practical in purpose, used as lures in fishing. Such a fishing technique is said to have been used by Yakuts, Tungus, Aleuts, Samoyeds, Orochi, Eskimos and Algonkins. 17 examples of the neolithic and later forms are shown in illus. Summary in French.

**Copy seen:** DLC.

**24813. OKLADNIKOV, ALEKSEĬ PAVLOVICH.** Kul't medvedia u neoliticheskikh plemen vostochnoi Sibiri. (Sovetskaiia arkheologiia, 1950. t. 14, p. 7-19, 3 illus.) **Title tr.:** The bear cult among the neolithic tribes of Western Siberia.

*Contains* account of the prehistoric art of Siberia in which stone and wood carvings of reindeer and bear are the common figures. The cult and rites of the bear are noted especially in regard to its importance to shamanistic ideology. In the social organization, the two phratries of reindeer and bear are quite

obvious; parallels of the bear head sculptures in the Lake Baykal region and in North America.

**24814. OKLADNIKOV, ALEKSEĬ PAVLOVICH.** Lenskie drevnosti. Vypusk pervyi. Otechet ob arkhéologicheskikh issledovaniakh v nizov'akh reki Leny (Ākutsk-Zhigansk) v 1942-1943 gg. [Ākutsk,] 1945. 94 [5] p., illus., maps. (Materialy po drevnei istorii Ākutii) *Title tr.:* Lena antiquities. Part 1. Report on archeological research on the lower section of the Lena River (Yakutsk-Zhigansk) in 1942 and 1943.

Following a general outline of the difficulty and paucity of archeological work in the area, due mainly to the severe climate, author reviews past achievements and nature of the country; describes investigations carried on by the Lena Historical Archeological Expedition at 15 points along a route of 760 km. Remains were found from the neolithic, bronze, and the early, middle, and late iron age. Summary in English.

*Copy seen:* DLC.

**24815. OKLADNIKOV, ALEKSEĬ PAVLOVICH.** Pervyi neoliticheskii pamiatnik Chukotskogo poluostrova. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1950. vyp. 31, p. 196-98) *Title tr.:* The first neolithic monuments of the Chukotsk Peninsula.

Contains a classification (4 types described) and evaluation of the flint artifacts found in the summer of 1947 in central Chukotka by N. N. Levoshin, q. v. It is stressed that these are the only archeological remains so far found in the interior (as contrasted with the coast) of the peninsula. They represent the only relics found in this area of an ancient, continental culture of migrant tundra hunters, akin to those of the lower Lena and Kolyma; these artifacts are the oldest traces of man on this peninsula, which is considered to have been inhabited by sea-animal hunters probably not earlier than 500 A. D.

**24816. OKLADNIKOV, ALEKSEĬ PAVLOVICH.** Proiskhozhdenie ākutskogo naroda (Vsesoiūznoe geografičeskoe obshchestvo. Izvestiia, 1951. v. 83, p. 341-52) *Title tr.:* The origin of the Yakut people.

Contains a discussion of the views on the origin of the Yakuts in which the author defends the ideas of Stalin against those of N. Ā. Marr. On the basis of historical, ethnological and linguistic evidence, the author comes to the conclusion that the Yakuts originated in the South, probably in Central Asia, whence they migrated to their present location. Bibliography (9 items).

**24817. OKLADNIKOV, ALEKSEĬ PAVLOVICH.** Russkie polārnnye morekhody XVII veka u beregov Taymyra. Moskva, Izd-vo Glavsevmorputi, 1948. 156 p., illus. map. *Title tr.:* Russian arctic seafarers of the 17th century on the Taymyr coast.

Contains a description of relics found in 1940-41, also later by a special expedition of the writer in 1945 on Faddeya Island (77° N. 107°50' E.) and in Simms Bay. These finds throw new light on Russian trading and hunting in this area at the beginning of the 17th century. A reconstruction of the early voyagers' life, occupations, trade and travels is offered, on the basis of these finds and other sources.

**24852. OPPENHEIMER, M. J., and A. McCRAVEY.** Circulation time in man at low temperatures. (American journal of physiology, May 1940. v. 129, p. P434-35)

Contains a brief account of circulation time in relation to skin and rectal temperatures in patients made hypothermic. In all three groups studied there was an increase of circulation times in hypothermic subjects as compared with those with a normal body temperature.

**Copy seen:** DLC.

**24853. OPPENHEIMER, M. J., and A. McCRAVEY.** Pulmonary circulation time in man at low body temperatures. (Society for Experimental Biology and Medicine. Proceedings, Mar. 1941. v. 46, p. 513-99, 3 tables)

Contains a study on patients whose internal temperature was lowered "toward 85° F." Circulation times, effect of anesthesia and of shivering, and the effects of cooling on pulse rate and blood pressure are discussed. Pulmonary circulation was prolonged in the hypothermic subjects, a correlation with rectal temperature existing only when the femoral vein was injected; shivering shortened the circulation time or minimized its prolongation due to hypothermia.

**24870. ORVIG, SVENN.** The climate of the ablation period on the Barnes Icecap in 1950. (Geografiska annaler, 1951. v. 33, p. 166-209, illus., 3 maps, diags.)

*Contains* report on meteorological observations carried out on the icecap by the Baffin Island Expedition of the Arctic Institute of North America during June-Aug. 1950. "The regime of the icecap, the ablation at the Main Camp, and the meteorological conditions at the edge and at the Main Camp, both at the surface and at various levels above the surface were investigated. Observations included pressure, temperature, and humidity at 3 ft. and at 23 ft. above the surface, temperature at 13 ft., wind speed and direction at 7 ft. and at 23 ft. above the surface. Clouds, cloudiness, fog, visibility, and ceiling were recorded. Maximum and minimum temperatures and precipitation were observed 3 times daily. Snowfall was measured by stakes, rain by means of rain gages. Two thermistors were placed at 4 m. and 2.5 m. below the surface of the ice and read throughout the summer. No firn was found anywhere

on the icecap, and 89 cm. of snow were measured on the ice near the highest point. The ice thickness under the Main Camp was 466 m. The increase in temperature with height was nearly linear, 0.13° F./ft. between 3-23 ft. The frequency distribution of temperatures shows that the icecap acts as temperature stabilizer."—SIPRE.

**24875. OSBORNE, DOUGLAS.** Late Eskimo archaeology in the western Mackenzie delta area. (American antiquity, July 1952. v. 18, no. 1, p. 30-39, 32 *illus.*, sketch map)

*Contains* report on a nine-day exploration trip to the shore areas along the arctic coast between Shingle Point and Blow River, Yukon Territory, by the University of New Mexico Mackenzie Valley Expedition of 1938: ten Eskimo graves and five house sites were discovered and examined. The burials and structures are found to be typical of the Eskimos as a whole. The dead wrapped in skins, uncoffined bodies shrouded, sleds and kayaks broken over the grave, etc.; the materials collected (latter 19th-early 20th century in date) are largely of Western Thule in form. Close cultural continuity from Point Barrow to the Mackenzie is indicated by comparison with Murdoch's and Stefansson's collections. Athapaskan influence is apparently demonstrated by the bark boxes and umiak-canoe found.

**24895. OSSIANNILSSON, FREJ, 1908-** . Släktet *Cixius* Latr. i Sverige. (Opuscula entomologica, 1941. Bd. 6, häft. 1, p. 1-5) **Title tr.:** The genus *Cixius* Latr. in Sweden.

Contains a critical revision of five Swedish species of the hemipterous genus *Cixius*, with a key to the species, critical notes and a list of localities; includes *C. cunicularius*, native to Asele and Pite Lappmark, and *C. similis* from Pite and Lule Lappmark. Summary in German.

**Copy seen:** DA; MH-Z.

**24896. OSSIANNILSSON, FREJ, 1908-** . Tva anmärkningsvärda fynd

av Heteroptera i Stockholmstrak. (Hemipterologiska notiser V). (Opuscula entomologica, 1945. Bd. 10, häft. 3-4, p. 98-99) **Title tr.:** Two noteworthy finds of Heteroptera in vicinity of Stockholm. (Hemipterological notes V).

Contains a record of finding of *Phimodera lapponica* (known previously from Torne Lappmark, Angermanland and Norrbotten) in Ekero, near Stockholm, a first record of this northern species in southern Sweden.

**Copy seen:** DA; MH-Z.

**24897. OSSIANNILSSON, FREJ, 1908-** . Über einige schwedischen Arten der Gattung *Cicadula* (Homoptera Cicadina). (Opuscula entomologica, 1936. Bd. 1, häft. 1, p. 6-11, illus.) **Title tr.:** On some Swedish species of the genus *Cicadula* (Homoptera Cicadina).

Contains a list of 15 Swedish species of cicadas of the homopterous genus *Cicadula*, with Latin descriptions of two new species, including *C. hamata* n. sp. from Pite Lappmark, and critical notes on six species native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**24898. OSSIANNILSSON, FREJ, 1908-** . Über Zetterstedts *Cicada lividella* und verwandte Arten der Gattung *Dellocephalus* (Homoptera Cicadina) mit Beschreibungen von zwei neuen Arten. (Opuscula entomologica 1938. Bd. 3, häft. 1-2, p. 1-6, illus.) **Title tr.:** On Zetterstedt's *Cicada lividella* and related species of the genus *Dellocephalus* (Homoptera Cicadina) with descriptions of two new species.

Contains a critical study of a collective species of cicadas, described by Zetterstedt (in his *Insecta lapponica*, 1840, q. v.) as *Cicada lividella*, with German diagnoses of two related species, *Dellocephalus lapponicus* n. sp. native to Arvidsjaur and *D. aquilonis* n. sp. from Kittelfjäll, Asele Lappmark.

**Copy seen:** DA; MH-Z.

**24899. OSSIANNILSSON, FREJ, 1809-** . Zur Kenntnis der schwedischen Homopterfauna mit Beschreibung der neuen Art *Erythroneura silvicola*. (Opuscula entomologica, 1937. Bd. 2, häft. 1, p. 19-27, illus.) **Title tr.:** A contribution to the Homoptera fauna of Sweden with a description of *Erythroneura silvicola* n. sp.

Contains descriptive notes on 30 species (one new) of cicadas and plant lice from various regions of Sweden, including

*Dellocephalus confinis*, *Cicadula cristata* and *C. alpina*, native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**24900. OSTENFELD, CARL EMIL HANSEN, 1873-1931, ed.** Flora arctica, containing descriptions of the flowering plants and ferns found in the arctic region, with their distribution in these countries. Ed. by C. H. Ostenfeld. Pt. I. Pteridophyta, Gymnospermae and Monocotyledons, by O. Gelet and C. H. Ostenfeld. Copenhagen, Det Nordiske forlag, 1902. xi, 134 [2] p., illus.

This part was begun by O. Gelet who died in 1899, then completed and edited by Ostenfeld. Succeeding parts were not published.

Contains a critical revision of the flowering plants and ferns of the whole arctic region, including tables for the determination of the families, genera and species and descriptions of 30 ferns and 212 species of gymnosperms and monocotyledons, with synonymy and data on geographic distribution; bibliography of all the abridgements (93 items), p. vii-xi.

**Copy seen:** MH-G.

**24901. OSTEN-SACKEN, C. R.** Studies on Tipulidae, part I. Review of the published genera of the Tipulidae longipalpi. (Berliner entomologische Zeitschrift, 1886. Bd. 20, Heft 2, p. 153-88)

Contains a critical revision of the genera of crane flies of the group Tipulidae longipalpi, with keys, descriptions, critical notes, data on distribution and synopses of the species. Includes *Xiphura agrata*, *X. nigricornis* and *Ctenophora pectinicornis*, native to Swedish Lapland.

**Copy seen:** MH-Z.

**24902. OSTERGREN, HJALMAR.** The Holothuriodea of Northern Norway. (Bergen. Norway. Museum. Aarbok, 1902, pub. 1903. no. 9, p. 1-34)

Contains a systematic list of 17 species of sea cucumbers (holothurians), collected mostly by O. Nordgaard from 67° N. lat. northward to Nordkap, with localities, data on habitat and occasional critical notes; the limits of arctic fauna and elements are also discussed.

**Copy seen:** MH-Z.

**24903. OSTERGREN, HJALMAR.** Über die Holothuriiden Norwegens. (Bergen, Norway. Museum. Aarbok, 1896, pub. 1897. nr. 12, p. 1-9, plate) **Title tr.:** On holothurians of Norway.

Contains descriptions of two species of

sea cucumbers of Norwegian waters, including *Stichopus tremulus* distributed along the western coast from the south up to Varanger Fiord, northern Norway.

**Copy seen:** MH-Z.

**24904. OSTREKIN, MIKHAIL E.** Novye magnitnye i ionosfernye stantsii v Sovetskoi Arklike. (Problemy Arktiki, 1944, pub. 1945, no. 2, p. 120-21) **Title tr.:** New magnetic and ionospheric stations in the Soviet Arctic.

Contains brief notes on the instrumental equipment and schedule of observations of the magnetic stations at Tiksi Bay, Uelen, and Kozhevnikov Bay (74°04' N. 100°17' E.), and the ionospheric station at Tiksi Bay, where the work began in 1944.

**Copy seen:** DGS.

**24905. OSTROUMOV, A. A., and M. D. SHISHMAREV.** Promernye raboty v morfakh Arktiki. Leningrad, Izd-vo Glavsevmorputi, 1940. 51 p. (Biblioteka "Stakhanovskiy Arktiki", kn. 23) **Title tr.:** Surveying in arctic seas.

Contains a study of hydrographic survey methods especially of bottom relief, with data on organization of the work, instruments and equipment, various methods used in the open sea and in coastal waters, etc.; based mostly on the experience of Soviet hydrographers in arctic seas of the U.S.S.R.

**Copy seen:** MH.

**24906. OSVALD, HUGO.** *Sphagnum flavicomans* (Card.) Warnst. Taxonomy, distribution and ecology. (Acta phytogeographica suecica, 1940. t. 13. Växtgeografiska studier tillägnade C. Skottsberg, p. 39-49, illus., plate 1)

Contains data on taxonomy, distribution and ecology of a moss, *Sphagnum flavicomans*, a species conspicuous in north European flora; an analysis of the associated plants and a list of localities, including Imandra, in Kola Peninsula, Jakobshavn in West Greenland and Labrador. **Copy seen:** DA; MH-A.

**24907. OSWALT, WENDELL H.** The archaeology of Hooper Bay village, Alaska. (Alaska. University. Anthropological papers, 1952. v. 1, no. 1, p. 47-91, illus., 9 plates)

Contains account of excavations, made in 1951 at Hooper Bay village (61°31' N. 165°55' W.) on the west Alaskan coast. Numerous objects found are described and illustrated, as well as the process

of excavation; the archeological objects are classified according to their functions: sea hunting, land hunting, fishing, tools, household, transportation, personal adornment, tobacco complex, toys, ceremonial objects and miscellaneous. In each group, description of artifacts is followed by comparison of the group with similar finds elsewhere. The investigations were initiated "in order to determine prehistoric cultural affinities between this locality [Hooper Bay] and other regions of Alaska." Using the Douglass system of tree-ring dating, the author concludes that the bottom of the midden would date shortly after 1600 A. D. Though the artifacts show similarities to widespread general forms, important specific types are common to Hooper Bay Eskimos and adjacent Ingalik Indians. Bibliography (34 items).

**Copy seen:** CaMAI; DLC.

**24908. OSWALT, WENDELL, H.** The origin of driftwood at Hooper Bay, Alaska. (Tree-ring bulletin, July 1951. v. 18, no. 1, p. 6-8)

*Contains* a study (aided by the Arctic Institute of North America and several other agencies) on the origin of spruce logs which have drifted ashore along a 3-mile section of the Bering Sea coast, opposite Hooper Bay village (ca. 61°30' N. 165°55' W.). The (small) percentage of logs suitable for study and their derivation is indicated, author noting that determination of origin of larger quantity may advance knowledge of northern ocean currents.

**Copy seen:** DAI.

**24909. OSWALT, WENDELL H.** Pottery from Hooper Bay village, Alaska. (American antiquity, July 1952. v. 18, no. 1, p. 18-29, illus., plates, map)

*Contains* account of archeological excavations carried out by the author in the summer of 1950 sponsored by Arctic Institute of North America and the Bering Strait Expedition. The material secured at this site on the West Alaskan coast (61°30' N. 166° W.) includes about 2000 artifacts and 1500 pot and lamp sherds, of which the author presents here a preliminary analysis of the cooking pots. The vessel shapes fit into the Bristol Bay-Norton Sound category of pottery (de Laguna's classification). The zig-zag and striated designs may now be added to the elements known in the region; the former, a recent innovation. The striated ware (and the flat-bottomed

pot) may be considered as the survival of an old Eskimo pottery style.

**24910. OTSTAVNOVA, E. I.** Pervaia pomoshch' pri otmorozheniakh i zamerzani. (Fel'dsher i akusherka, Dec. 1950, god 15, no. 12, p. 28-31) **Title tr.:** First aid in frostbite and freezing.

*Contains* information on the damaging effect of cold on human tissues and organism; degrees of frostbite (4); new methods of first aid: quick rewarming (as against the old ways of rubbing with snow, keeping the patient in cold rooms, etc.), warm drinks, alcohol in moderate doses; massage, etc. **Copy seen:** DLC.

**24911. OTTO, FREL.** Fahrzeuge in Eis und Schnee. (Umschau, Jan. 1952. Bd. 52, p. 52-54, incl. illus., diags.) **Title tr.:** Vehicles in ice and snow.

"The Tucker Sno-Cat and a sled with four driven skis are compared. The Sno-Cat rests on four chain-skids or on two chain-skids and two steering-skids, and attains velocities of 15-25 km./hr. The ski-sled is steered by transferring the drive-energy from the two inner skis to the two outer skis. Retractable steering-skids are used in gliding and for braking. The cross section of the running ski is provided with a refined steel skid for progression on ice. A maximum velocity of 60-80 km./hr. may be attained on smooth ice surfaces. The vehicle is powered by means of a combustion motor or electrically. A description of the operating mechanism is given."—SIPRE.

**Copy seen:** DLC.

**24912. OUGHTON, JOHN GEORGE, 1909-** Great Slave Lake. (Nautilus, Jan. 1945. v. 58, p. 73-79)

A member of the Canadian Northwest Fisheries Investigations, partly describes the party's trip in summer 1944, and country traversed along the Athabasca and Slave Rivers, across Great Slave Lake to Yellowknife Bay, with remarks on the settlements at Resolution and Yellowknife; 21 species of fresh-water molluscs collected during the summer, are listed. Errata (spelling corrections) are given on p. 143 of this volume.

**24923. PAASIO, ILMARI.** Suomen nevasoiden tyypijärjestelmä koskevia tutkimuksia. Helsinki, 1936. 129 p., tables. (Acta forestalia fennica, 44:3) **Title tr.:** Studies in the classification of Finnish white swamps by type.

The study covers regions over all Finland including the North, and has data on the following swamp types: water, flood, mottled, green, rush- and sedge-growing, mire, pale, true, and peat bog. Bibliography (about 75 items). Summary in German, p. 113-29.

**Copy seen:** DLC.

**24924. PAASONEN, HEIKKI, 1865-1919.** Beiträge zur Aufhellung der Frage nach der Urheimat der finnisch-ugrischen Völker. Helsinki, 1923. 19 p. (Åbo, Finland. Suomalainen Yliopisto. Julkaisu, ser. B, t. 1, no. 5) **Title tr.:** Contributions to the clarification of question of the old homeland of the Finno-Ugric peoples.

Contains critical review of the theories on this problem advanced by Europaeus,

Ferdinand Johann Widemann (in 1838), Matthias Alexander Castrén (in 1849), Max Müller, and Fr. Th. Köppen (in 1890). Castrén's theory was that the old homeland of the Finno-Ugric peoples was in Asia, in the region of the Sayan Mts. and the western Altai. Paasonen bases his paper, written in 1904, on the names for trees, especially the pine (*Pinus cembra*), and cedar, and comes to the conclusion that the Finno-Ugric ancestors lived somewhere in the region where Europe and Asia meet. The southern border of pine is 56° N. lat. and that of cedar between 57° and 58° N. lat. in western Siberia, and up to 59° N. on the European side of the Ural Mts., where cedar is found only in a region of about 30 miles westward of the Ural Mts.

**Copy seen:** DLC.

**24925. PAASONEN, HEIKKI, 1865-1919.** Ostjakisches Wörterbuch, nach den Dialekten an der Konda und am Jugan. Zusammengestellt, neu transkribiert und herausgegeben von Kai Donner. Helsingfors, 1926. xxxiv, 334 p. (Suomalais-ugrilainen seura. Lexica Societatis Fennougricae, 2) **Title tr.:** Ostyak dictionary by H. Paasonen, according to the dialects on Konda, and Yugan. Grouped, newly transcribed and edited by Kai Donner.

Preface gives account of Paasonen's sojourn among the Ostyaks in 1900-1901, data on the phonetic transcription and editor's procedure. Following the dictionary is an index in German (p. 303-332).

**Copy seen:** InU; NN.

*Contains* Latin diagnoses of 15 species mostly from the Pacific and Kurile Islands, including two gastropods, *Chiton amiculatus* from Petropavlovsk and Lopatka Cape regions, and *Helix coriacea* from the Okhotsk Sea near the estuary of Bol'shaya River. **Copy seen:** MH.

**24943. PALLAS, PETER SIMON, 1741-1811.** *Piscium novae species descriptae*. (Akademiä nauk SSSR. Nova acta, 1767. t. 1, p. 347-60, plates 9-11) **Title tr.:** Descriptions of new species of fishes.

*Contains* Latin descriptions of seven new species of fresh-water and marine fishes, including *Cottus diceraus* n. sp. collected (during the Bering expedition) by S. Krasheninnikov and G. W. Steller in Kamchatka waters (Cape Avacha). **Copy seen:** DLC; MH.

**24944. PALM, NILS BERTIL.** *Microlepidoptera, Neuroptera, and Trichoptera* from Medelpad and Norrbotten, Sweden, with descriptions of some new Tineid species. (Opuscula entomologica, 1947. Bd. 12, häft. 1-3, p. 35-49)

*Contains* descriptions of six new lepidoptera, including *Phthorimaea atralbella*, *P. kemnerella* and *Coleophora digitella* n. spp. collected by the author in the summer of 1946 near Karlsborg, Norrbotten; and a list of 165 lepidoptera, eight neuroptera and ten caddis flies, of which 116 lepidoptera are new to the fauna of the region. **Copy seen:** DA; MH-Z.

**24945. PALM, THURE, 1894-** . Anteckningar om svenska skalbaggar, IV-V. (Entomologisk tidskrift, 1949. Årg. 70, häft. 1-2, p. 6-11; (V) 1950, Årg. 71, häft. 2, p. 129-43, illus.) **Title tr.:** Notes on Swedish beetles, IV-V.

*Contains* (in pt. IV) critical notes and data on distribution of 21 Swedish beetles, including 15 native to Swedish Lapland; and (in pt. V) critical notes on 35 species, including four native to northern Sweden. Pts. 1-3 do not include arctic material. **Copy seen:** DLC; MH-Z.

**24946. PALM, THURE, 1894-** . *Atomaria* (s. str.) *sjobergi* n. sp. (Col. Cryptophagidae). (Entomologisk tidskrift, 1949. Årg. 70, häft. 4, p. 241-42, illus.)

*Contains* a German description of a new beetle, *Atomaria sjobergi* n. sp., found by the author on June 12, 1947 under the bark of a birch near Kihlengi in Norrbotten. **Copy seen:** DLC; MH-Z.

**24947. PALM, THURE, 1894-** . *Bibloporus höglundi* n. sp. (Col. Pselaphidae). (Entomologisk tidskrift, 1948. Årg. 69, häft. 3, p. 122-24, illus.)

*Contains* a German diagnosis of a new beetle, *Bibloporus höglundi* n. sp., found in Ruskträsk, Lycksele Lappmark, and comparison with another closely related species *B. bicolor*. **Copy seen:** DA; MH-Z.

**24948. PALM, THURE, 1894-** . Bidrag till kännedomen om de nordiska *Aleochara*-arternas systematik, utbredning och levnadssätt (Col. Staphylinidae). (Entomologisk tidskrift, 1946. Årg. 67, häft. 1-2, p. 21-47, illus.) **Title tr.:** Contributions to the knowledge of systematics, distribution and mode of life of the northern *Aleochara* species (Col. Staphylinidae).

*Contains* a morphological and systematic sketch of the coleopterous genus *Aleochara*, a table for the determination of the northern species, another table with dimensions and data on microsculpture and a list of 35 species with critical notes and data on biology and distribution; includes *A. villosa* and *A. laevigata* native to northern regions of Scandinavia (69° N.). **Copy seen:** DA; MH-Z.

**24949. PALM, THURE, 1894-** . De nordiska *Lomechusa*-arterna. (Col. Staphylinidae). (Entomologisk tidskrift, 1949. Årg. 70, häft. 1-2, p. 97-102, illus.) **Title tr.:** On northern *Lomechusa* species.

*Contains* a table for the determination of the northern species of rove beetles (Staphylinidae) of the genus *Lomechusa*, and brief descriptions of four species, including *L. mariaae* n. sp., parasitic on the ant *Formica pratensis*, in Kihlengi, Norrbotten, and *L. inflata*, parasitic on *Formica rufa*, found in Vittangi, Torne Lappmark. **Copy seen:** DA; MH-Z.

**24950. PALM, THURE, 1894-** . Ett exempel på anemohydrochor insektspridning vid Torneträsk. (Entomologisk tidskrift, 1949. Årg. 70, häft. 1-2, p. 65-74, illus.) **Title tr.:** An example of spread of insects by wind and water near Torneträsk.

*Contains* results of a study carried out

by the author in the summer of 1948 around Torneträsk (lake) near Abisko in Torne Lappmark; with a list of 63 wind-driven insects and a table with data on the temperature, atmospheric pressure, velocity and direction of the wind in the Abisko and Kiruna region during the investigation. **Copy seen:** DA; MH-Z.

**24951. PALM, THURE, 1894-** . För Sverige nya Coleoptera, II-III. (Entomologisk tidskrift, 1931. Årg. 52, häft. 3-4, p. 202-208; 1937, Årg. 58, häft. 1-2, p. 10-18, illus.) **Title tr.:** Coleoptera new to Sweden, II-III.

**Contains** descriptive notes and data on distribution of 28 beetles new to Sweden, including (in pt. II) *Atheta (Metaxya) polaris* (Lappmark and Osterbotten) and *Limnobaris T.-album* L. sensu Reitter (-*martulus* Sahlb.) found in Norrbotten; and (in pt. III) *Bledius erraticus* collected near Abisko, Torne Lappmark; pts. I (1947) and IV (1937) do not contain arctic material. **Copy seen:** MH-Z.

**24952. PALM, THURE, 1894-** . För Sverige nya Coleoptera, V. (Entomologisk tidskrift, 1940. Årg. 61, häft. 1-2, p. 4-9) **Title tr.:** Coleoptera new to Sweden, V.

**Contains** critical notes on 9 species of beetles new to Sweden, including *Philonthus furcifer* found in the Torneå-Råneå coastal region of Norrbotten, previously known from northern Finland (68° N.). **Copy seen:** DA; MH-Z.

**24953. PALM, THURE, 1894-** . För Sverige nya Coleoptera, VII-VIII. (Entomologisk tidskrift, 1943. Årg. 64, häft. 3-4, p. 160-64; 1944, Årg. 65, häft 3-4, p. 166-72, illus.) **Title tr.:** Coleoptera new to the fauna of Sweden, VII-VIII.

**Contains** descriptive notes on 16 beetles new to Sweden, including *Anthobium sorbicola* found living on *Sorbus aucuparia* in Swedish Lapland (pt. VII, no. 2) and Swedish and German descriptions of *Enicmus nidicola* n. sp. native to Tromsø, Norway, and found also in southern Sweden. **Copy seen:** DA; MH-Z.

**24954. PALM, THURE, 1894-** . För Sverige nya Coleoptera, X-XII. (Entomologisk tidskrift, 1949. Årg. 70, häft 4, p. 232-40, illus.; (XI) 1950, Årg. 71, häft. 2, p. 124-28, illus.; (XIII) 1951, Årg. 72, häft 1-2, p. 54-59, illus.) **Title tr.:** Coleoptera new to Sweden, X-XII.

**Contains** descriptive notes and data on

distribution of 27 beetles new to Sweden, including a diagnosis of *Hygropora cunctans longicornis* n. subsp. from Abisko and Torneträsk region, Torne Lappmark (pt. X), and critical notes on eleven species, native to Swedish Lapland (pts. X-XII). **Copy seen:** DA; MH-Z.

**24955. PALM, THURE, 1894-** . Eine neue *Corticaria* aus Lappland (Col. Lathridiidae). (Entomologisk tidskrift, 1949. Årg. 70, häft. 1-2, p. 109-110, illus.) **Title tr.:** A new *Corticaria* from Lapland.

**Contains** a description of a new beetle, *Corticaria strandi* n. sp., found by the author near Malå, Swedish Lapland (65°20' N.) on July 15, 1948.

**Copy seen:** DA; MH-Z.

**24956. PALM, THURE, 1894-** . Die nordischen Arten der Gattung *Syncalypa* Stephens (Col. Byrrhidae). (Entomologisk tidskrift, 1934. Årg. 55, häft. 3-4, p. 299-316, illus., text maps) **Title tr.:** Northern species of the genus *Syncalypa* Stephens (Col., Byrrhidae).

**Contains** an historical review of the study of the coleopterous genus *Syncalypa*, its systematic position and limitation, brief data on its biology, a table for the determination of the species and critical notes and data on geographic distribution of five species in northern regions of Scandinavia and in Kola Peninsula. **Copy seen:** DA; MH-Z.

**24957. PALM, THURE, 1894-** . Om några kritiska *Agathidium*-arter (Col. Liodidae). (Entomologisk tidskrift, 1946. Årg. 67, häft. 4, p. 171-76) **Title tr.:** On some critical *Agathidium* species.

**Contains** a comparative taxonomic study of two beetles, *Agathidium nigrinum* and *A. arcticum*, and a table for the determination of eight species of the same genus. **Copy seen:** DA; MH-Z.

**24958. PALM, THURE, 1894-** . Våra *Caenoscelis*-arter med särskild hänsyn till *grandis* C. G. Thoms. (Col. Cryptophagidae). (Entomologisk tidskrift, 1943. Årg. 64, häft. 1-2, p. 86-90, illus.) **Title tr.:** Swedish *Caenoscelis* species with special consideration given to *C. grandis* C. G. Thoms. (Col. Cryptophagidae).

**Contains** descriptive notes on three Swedish beetles of the fam. Cryptophagidae, including *Caenoscelis ferruginea*, native to Lule Lappmark and *C. grandis* from Pälkem, Gällivare parish, northern

Lapland, and brief German descriptions of the same species.

**Copy seen:** DA; MH-Z.

**24959. PALM, THURE, 1894-** . Zwei neue *Colon*-Arten aus Schwedisch-lappland nebst einer Bestimmungstabelle der aus Nordeuropa bisher bekannt gewordenen Arten der Untergattung *Curvimanon* (Col. Silphidae). (Entomologisk tidskrift, 1941. Ärg. 61, häft. 3-4, p. 158-65, illus.) **Title tr.:** Two new *Colon* species from Swedish Lapland and a table for the determination of the species of the subgenus *Curvimanon* (Col. Silphidae) hitherto known from northern Europe.

Contains descriptions of *Colon* (*Curvimanon*) *pseudolatatum* and *C. (Curvimanon)* *brundini* n. spp. coleopters found in the birch belt in Torne Lappmark, and a key to five northern European species of subgenus *Curvimanon*, including two newly described.

**24963. PALMÉN, JOHAN AXEL, 1845-1919.** Ueber die Zugstrassen der Vögel. Leipzig, Verlag v. W. Engelmann, 1876. vi, 292 p., map. **Title tr.:** On migration routes of birds.

A classic and pioneer study of the routes of migratory birds in the Northern Hemisphere. It contains an historical review, data on selection of birds for the study and the results of observations, with a list of species observed in various regions, including Norway, Spitsbergen, western part of the Eurasian arctic seas, Jan Mayen, Sweden, Finland, northern Russia, Novaya Zemlya and Vaygach Island (p. 53-82), western Siberia (p. 124-26), central and eastern Siberia (p. 133-38); classification of migratory routes, winter stations, frequency of species and individuals on the routes, time of migration, categories of migratory and breeding birds, regular and irregular migration routes and their genetic importance, migration instinct and comments on the earlier studies on this subject. This is an enlarged and revised edition of Palmén's paper *Om foglarnes flyttingsvägar*, published as a thesis in 1874. A later and much briefer *Report on the migration of birds* by Palmén was published (in English) in Smithsonian Institution Annual report, 1891-92, pub. 1893, p. 375-96, map. Palmén's work was carried on later by I. Välikangas, q. v. **Copy seen:** DLC.

uznoe geograficheskoe obshchestvo. Izve-  
stiia, 1950. t. 82, no. 6, p. 582-606,  
illus.) **Title tr.:** On submarine "land-  
scapes" of the world ocean.

Following an outline of the factors which produce the "landscapes" of the sea, the author describes three under-water "climates": (1) the "shore climate" with strong fluctuations of temperature and gas content of the water; (2) the "tropospheric climate" with less change in these conditions; and (3) the "strato-spheric ocean climate" with no or very little change in temperature and gas content. The relief of the sea bottom and submarine "weathering" are dis-cussed as contributing to the character of the "landscape." The "landscapes" of the world ocean are outlined in the light of above and several additional considerations. **Copy seen:** DLC.

"Results of denudation studies by the Wordie 1934 Arctic Expedition are presented. The processes of denudation including nivation, weathering along joints, solifluction, polygonal structures, and chemical disintegration are discussed. Subaerial denudation in the arctic regions depends almost wholly upon diurnal and annual growth and melting of interstitial ice crystals. The effects of structural control and ice-crystal growth on the island topography are discussed. It is believed that the influence of glacial action responsible for the submerged fjord system did not determine the islands' topography. The influence of ice-crystal growth in the formation of cirques is analyzed."—SIPRE. Island topography is discussed in relation to Edderfugle and Ryder island groups and Djaevelens Tommelfinger; morphological history generally of the region 74°-75° N. 56°-58° W. is presented. Bibliography (21 items).

**Copy seen:** DLC.

**24991. PATKANOV, SERAPHIM KERPOVICH.** Die Irtysch-Ostjaken und ihre Volkspoesie. 1. Teil. Ethnographisch-statistische Übersicht. 2. Teil. Ostjakische Texte mit deutscher und russischer Übersetzung nebst Erläuterungen. St. Petersburg, l'Académie Impériale des Sciences, 1897-1900. 2 pt.: viii, 167 p.; viii, 25, 302, 113 p., 2 plates, fold. map. **Title tr.:** The Irtysch-Ostyaks and their folk poetry. Pt. 1. Ethnographic statistical survey. Pt. 2. Ostyak texts with German and Russian translations, along with explanations.

Contains material from author's observations made during a three-year sojourn (1886-88) among the Ostyaks of the Irtysch River region including a few months spent among the Ostyaks and Voguls of Tobolsk government. Pt. 1

contains chapters on (1) geography of the country, its landscape, waters, forests and animals; the three groups of the Ostyakian people: the northern group living in the district of Berezhovo (14,115 in 1858), the less acculturated eastern group in the districts of Surgut and Narym (6,700 in 1875); and the more advanced southwestern group, or the Irtysh-Ostyaks, living along the banks of the rivers Ob' (as far as Salym), Irtysh, Konda, Demyanka (right tributary of the Irtysh, 59° N. 72° E.) and some of its tributaries (2508 in 1887); (2) the mode of living, influence of neighbors (Zyryans, Tatars, Samoyeds, and Russians), the racial appearance, clothing, dwellings and villages; (3) occupational skills and production: fishing, hunting and trapping, gathering of berries and nuts, animal husbandry, trade; (4) remnants of the old indigenous culture: signs (*tamgas*) and signatures, embroideries, dyeing, music and musical instruments, the indigenous system of measuring for length and time, names of months; popular therapy: a healing potion made from birch fungus for diseases, moxibustion, treatment for snake poisoning, syphilis, etc.; (5) laws and administration; (6) dying out of Ostyaks, its cause and results (limited fertility of women, high child mortality, alcohol and smoking, starvation, etc.); (7) the religious beliefs: gods, spirits, sacrifices, idols, small houses for gods, souls of dead heroes, places of worship, the evil goddess Tarin, the priests, the venerated plants and animals (bear, swan, pike, etc.); (8) some customs and ideas about life after death: marriage, burial, the conceptions of soul and the underworld, giving of nicknames, taking an oath. *Appendices* give budget of a middle-class family, specimens of native signatures (pictographs) and statistical tables of Ostyak population in Tobolsk district.

Part 2 contains a general introduction to Ostyakian folk poetry: age, style, content, variations and origin of its heroic epos, the way of life depicted by the folk epics, mythological songs and legends, tales and their types, improvisatory and traditional songs, bear festival songs, riddles. Texts are given for five heroic songs, four tales, two mythological songs, seven lyrical songs, and 16 riddles, also melodies for 23 songs, all collected by the author, who added notes on the folk tales and pointed to the Russian parallels. Russian translations of the Ostyakian texts are given at end (109 p.). *Plates*

give photographic illus. of a bow and arrows (with quiver), musical instruments (lyre and harp); specimens in color of the Ostyak decorative needlework, etc. An ethnographical map shows the exact living places of the Ostyaks, Voguls, Tatars and Russians in the gov'n. of Tobolsk.

**24995. PAUL, JOHN RODMAN, 1893- ; and others.** Antibodies to three different antigenic types of poliomyelitis virus in sera from North Alaskan Eskimos. (American journal of hygiene, 1951. v. 54, no. 2, p. 275-85, tables, diagrs.) Other authors: John T. Riordan and Joseph L. Melnick.

Report on an additional survey of antibodies made in 1949 on 242 Eskimos from two villages, Barrow and Wainwright. Qualitative, neutralizing, antibody determinations to three strains of poliomyelitis virus (Lansing, Brunhilde, and Leon) have been compared; quantitative determinations were recorded with the Lansing strain. An attempt has been made to correlate the appearance of antibodies with the local story of poliomyelitis and certain crude correlations appeared to exist. Higher titers of antibodies to the Lansing strain were found in individuals above the age of 20 years; it appears that the Lansing antibody presumably acquired in 1930 or earlier, persisted for 20 years or more in the absence of reinfections, at a titer of 1 in 100 or greater up to the age of 40 years; in older individuals this titer declined somewhat. Antibodies to the Leon and Brunhilde strains were also found in an appreciable percentage of individuals, of 30 and 40 years of age. The record of appearance of the three kinds of antibodies suggests exposure to the three strains, around the years 1905, 1915 and 1930. Clinical records indicate a few fatal cases in 1930, and a medical missionary furnished a brief account of an epidemic prior to 1921. Bibliography (7 items). **Copy seen:** DSG.

**24996. PAUL, JOHN RODMAN, 1893-**, and **J. T. RIORDAN**. Observations on serological epidemiology. Antibodies to the Lansing strain of poliomyelitis virus in sera from Alaskan Eskimos. (American journal of hygiene, 1950. v. 52, p. 202-212, illus., map, tables)

Serum samples from 243 Eskimos of various age groups, and living at the villages of Barrow and Wainwright, northern Alaska have been studied for the presence or absence of neutralizing antibodies to the Lansing strain of poliomyelitis virus. Poliomyelitis is known to have been present in this area in 1930 but there is no reliable record of its presence before or after this date. The tests revealed that nearly all natives tested, who were below the age of 20 failed to have antibodies, while 80 percent of those over 20 had the antibodies. Bibliography (11 items). **Copy seen:** DSG.

**24997. PAUL, JOHN RODMAN, 1893-**, and others. Serological epidemiology: antibody patterns in North Alaskan Eskimos. (Journal of immunology, 1951. v. 66, no. 6, p. 695-713, map, tables,

diagrams.) **Other authors:** John T. Riordan and Lisbeth M. Kraft.

Report of antibody determinations made on 242 blood samples, covering a wide age distribution, and collected from remote villages of the North Alaskan coast, mainly from Barrow and Wainwright. "Specific" antibody tests employed included: the neutralization test for Lansing poliomyelitis virus and for some of the Coxsackie viruses; complement fixing antibodies to the mumps virus, and to *Trichinella spiralis*; antistreptococcal enzyme tests; tests for syphilis. "Non-specific" tests included measurement of gamma globulin by chemical means and sheep cell agglutinin titrations. In a few tests reported, significant deviations from expected patterns appeared. These were usually manifested by a delay in the age at which a given antibody appeared and the speed it built up to what was termed by the authors "usual adult levels" (—From summary). Bibliography (22 items).

25010. PEARCE, D. C., and L. W. GOLD. The Canadian snow survey 1947-1950. Ottawa, 1951. 34 p. incl. illus., tables, graphs, map, diagrs. (Canada. National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 21)

"A summary of the physical characteristics of snow covers throughout Canada is presented. The survey was made by 12 observation stations at locations ranging from Resolute on Cornwallis Island (NWT. to Malton, Ont.) A general description of each location is given. The physical properties of the snow cover that were measured include specific gravity, freewater content, presence of chemical admixtures, size and shape of grains, temperature arrangement and hardness.

The instruments consisted of snow sample cutters, beam type balance, hardness gage, cup, magnifying glass, and spatula for grain size and shape measurements, and mercury and liquid-filled thermometers. The snow was described by a *Tentative Snow Classification*. Bi-weekly profile observations and daily snow cover observations were made at each station. All results were reduced to a graphical form. It was found that air temperature and wind had considerable effect on the snow cover while the influence of sunshine appeared to be small. An analysis of the snow conditions at each station including a summary of the snow profile is given."—SIPRE.

**25011. PEARSON, C. A., and M. J. KOOMEN.** Night sky brightness in Maryland and Greenland during 1949. (American Geophysical Union. Transactions, 1950. v. 31, no. 4, p. 545-46)

"Visual measurements of night sky brightness were made from stations located north of the equator by means of a photometer using a radium activated luminous phosphor button. The measured brightness refers mainly to the visible radiations from the permanent aurora originating in the upper atmosphere and is a function of altitude above the horizon. No important changes with latitude were observed; but night-to-night and long term fluctuations were revealed. A correlation between fluctuations of night sky brightness and long term trends of solar coronal indices, as observed at Climax, Colorado has been found."—*Meteorological abstracts and bibliography*, Jan. 1951. v. 2, no. 1, p. 23.

**25015. PEARSON, HENRY JOHN, 1850-1913.** "Beyond Petsora eastward". Two summer voyages to Novaya Zemlya and the islands of Barents Sea. With appendices on the botany and geology by Colonel H. W. Feilden. London, R. H. Porter, 1899. xiv, 335 p., front., illus., plates 1-88, 2 fold. maps.

A general account in diary form of two voyages to Novaya Zemlya, the first made in 1895 by the author, his brother C. E. Pearson, Col. H. W. Feilden and H. H. Slater on the yacht *Saxon*, and the second in 1897 on the chartered steamship *Laura* with Col. Feilden and F. Curtis. "The study of birds-life was the first reason and object of the voyages"—p. xiii. The narrative is presented under the following chapters:

Chap. 1 (p. 1-19) Russian Lapland, 1895; 2 (p. 19-38) Kolguyev; 3 (p. 39-55) Novaya Zemlya; 4 (p. 56-59) Arrangements for 1897; 5 (p. 60-74) Our voyage to Waigatch; 6 (p. 75-95) Dolgaja Bay, Waigatch; 7 (p. 96-117) Waigatch, Habarova, and Dolgoi; 8 (p. 118-33) Novaya Zemlya and Lutke Land [the northern island of Novaya Zemlya]; 9 (p. 134-41) Russian exploration; 10 (p. 142-68) Lutke Land and Novaya Zemlya.

Appendices A-E (p. 171-228); *Flora* of Russian Lapland, flora of Kolguyev, flowering plants of Novaya Zemlya, lichens and fungi from Novaya Zemlya by H. W. Feilden; app. F (p. 229-310), *Geology*: pt. 1, Kolguyev Island; pt. 2, Arctic Norway, Russian Lapland, Novaya Zemlya and Spitsbergen; pt. 3, Dolgoi Island, Waigatch, Novaya Zemlya and Lutke Land, by H. W. Feilden with

collaboration of Prof. T. G. Bonney, H. S. Jevons, E. T. Newton (notes on fossils) and J. Wright (Report on Pleistocene Foraminifera); App. G (p. 311-24): *Ornithology*; Index, p. 325-35.

**25018. PEDERSEN, P. O.** Numerical variations in Greenland Eskimo dentition. A contribution to comparative racial odontology. (*Acta odontologica scandinavica*, 1939. v. 1, p. 94-134, illus., map, tables)

*Contains* a study of (1) 527 ancient Greenland skulls (in the University of Copenhagen Institute of normal anatomy); (2) 860 modern East Greenland pure-blood Eskimos (examined by the author in summer 1937 at Angmagssalik and Scoresbysund where his party "the Danish Dental Expedition" worked in cooperation with Dr. Arne Høygaard's Norwegian biochemical research party); (3) 1634 southwest Greenland natives, largely hybrids (examined by the author in 1935 in Julianehaab District). Roentgenograms were made in the first two groups. The author was assisted by Dr. Einar Hinsch. Increase in number of permanent teeth was not found to be higher than in the white race, nor was there any difference in this respect, between the ancient and modern Greenland Eskimos and the hybrids of West Greenland. There was no evidence that fourth molars are more frequent in Eskimos than in whites. Congenital absence in the Eskimo dentition is very strange and distinctly differs from that of the white groups but has some resemblance to that of the Mongolian stock. Specifically: lower incisors are almost as often absent as upper lateral incisors; lower second bicuspids (frequently absent in whites) are very seldom missing; second and first molars were found to be missing; congenital absence of third molars is very common. Bibliography (92 items).

**PEKARSKII**, see also No. 25088.

**25021. PEKARSKII, ÉDUARD KARLOVICH, and others.** Slovar' iakutskago iazyka; sostavlennyi É. K. Pekarskim, pri blizhatšem uchastii D. D. Popova i V. M. Ionova. S.-Peterburg. Izd-vo Akademii nauk, 1907-1930. **Title tr.:** Dictionary of the Yakut language; prepared by É. K. Pekarskii with the collaboration of D. D. Popov and V. M. Ionov.

13 [i. e. 12] pt. in 3 v. "5" omitted in numbering of parts. xviii p. 3856 col. viii p. (iAkutskaiâ ékspeditsiia snariâzhennaiâ na sredstva I. M. Sibirâkova, 1894-1896, t. 3, chast'1). The first part was originally issued in Yakutsk, 1899; revised and re-issued in 1907.

Contains about 20,000 words, (v. 1 (pt. 1-4): A-K; v. 2 (pt. 6-9) L-S; v. 3 (pt. 10-13) T-Y) collected by Bätling (i. e. Otto Böhlingk), Ionov, Popov, and (mostly) by the author himself from the Yakuts living in the regions of Yakutsk, Verkhoyansk, Vilyuysk, and Olekminsk, with the support of the Yakut Expedition of I. M. Sibirâkov 1894-96. Each word in the dictionary received as thorough treatment as possible as regards its origin or etymology, different dialectal pronunciations, relations with Mongol-Buryat and Turcic dialects, the basic root of the word and its derivatives, phraseology, synonyms, secondary meanings, etc. Names for plants, animals, places, folkloristic and mythological beings are in-

cluded; illustrations given from the living language or folk traditions as well as place where the word was recorded or its source, etc. The doubtful words are marked as such. Sources (120 items) are listed in v. 1, p. x-xviii and v. 3, p. i-viii.

**Copy seen:** DLC (pt. 1-4, 6-12); MH (pt. 1-13 complete).

**25027. PENNDORF, RUDOLF.** The annual variation of the amount of ozone of northern Norway. (Annales de géophysique, 1950. t. 6, no. 1, p. 4-9, 3 figs., table)

"Normal daily ozone values and the interdiurnal variations of the amount of ozone have been calculated for Tromsø, Norway. The annual variation of ozone *E* is analyzed. The interdiurnal variation differs considerably between winter and summer; the standard deviation in July is  $9.5 \times 10^{-3}$  cm. and in December  $56 \times 10^{-3}$  cm. In summer the equilibrium between ozone formation and dissociation is maintained more or less throughout most of the Northern Hemisphere so that the differences of the vertical distribution are small and the interdiurnal variation is small. In winter the vertical distribution is different over middle and high latitudes and so ozone is formed over the polar region. Hence, advection determines the amount of ozone *E*."—*Meteorological abstracts and bibliography*, Jan. 1951. v. 2, no. 1, p. 14.

**25028. PENROD, KENNETH EARL, 1916- , and F. R. ROSENHAIN.** Blood gas content of dogs during immersion hypothermia. (Federation proceedings, Mar. 1949. v. 8, p. 126)

Analyses of arterial and venous blood from one group of dogs breathing air before immersion and a second group breathing 100% O<sub>2</sub>. In group one, approaching respiratory inadequacy ap-

peared above 25° C. rectal temperature to 20°; dogs surviving to below 20° C. showed venous O<sub>2</sub> content equal to, or greater than pre-immersion levels. In group two nearly every case showed respiration depressed throughout; some showed respiratory failure above 25° C.; and the venous O<sub>2</sub> content was higher in many at 25° C. than before immersion.

**Copy seen:** DLC.

**25029. PENROD, KENNETH EARL, 1916- .** Oxygen consumption and cooling rates in immersion hypothermia in the dog. (American journal of physiology, June 1949. v. 157, p. 436-44)

Contains a report on experiments with seven lightly anesthetized dogs, cooled by immersion in cold water to a rectal temperature of 20° C., and rewarmed; O<sub>2</sub> consumption and rates of temperature change were recorded continuously; observations on cooling rates of dead dogs are also presented. It is concluded that shivering (which is largely an individual characteristic, at least under anesthesia) has a profound influence on O<sub>2</sub> consumption and rate of cooling; only at the lowest temperatures where shivering is never seen is it possible to predict accurately the metabolic response of a given animal. Bibliography (20 items).

**25034. PEREVALOV, V. A.** Lomonosov i Arktika. Iz istorii geograficheskoi nauki i geograficheskikh otkrytij. Moskva-Leningrad, Izd-vo Glavsevmorputi, 1949. 504 p., illus., ports., facsim., maps (4 fold.) **Title tr.:** Lomonosov and the Arctic. From the history of geographical science and geographical discoveries.

Contains three parts: 1 (p. 23-215). Text of Lomonosov's *Kratkoe opisaniye raznykh puteshestvij po severnym moram* . . . etc., 1763 (published in 1847), q. v., with extensive commentaries: 2 (p. 217-381). Activities of M. V. Lomonosov in the organization of Russian arctic expeditions, includes two supplements to *Kratkoe opisaniye*, also *Primernaiu instruksiu morskim komanduushchim ofiseram* . . . etc., 1765, q. v., with extensive commentaries: 3 (p. 383-431). Description of expedition under V. Ė. Chichagov, 1765-66; and (p. 433-66) of expedition under P. K. Krenitsyn, 1764-71.

Parts 1-2 give a characterization of M. V. Lomonosov as a Russian scientist, inventor, statesman and poet, with a full account of his interest and work in the Arctic and added commentaries offering up-to-date information on arctic travel, with extensive bibliography. This supplemental material includes notes on: the founding of Arkhangel'sk and Russian expansion eastward (p. 48-51); relics of ancient Russian northeastern expeditions (p. 88-93); the conquest of Siberia by Stroganov and Ermak (p. 104-114); expeditions of F. A. Popov and S. I. Dezhnev and the discovery of Kamehatka by V. Atlasov in 1697 (p. 114-18); the activities of Peter the Great and the Great Northern Expedition (p. 120-27); the discovery of the American coast of Bering Strait by M. S. Gvozdev in 1732 (p. 128); northeastern discoveries of Russian merchants and Cossacks (A. Shestakov and others), (p. 132-33); the expedition of Bering and Chirikov (p. 137-39); the alleged crossing of the Arctic sea by the

Portuguese, D. Melguer (1660) and its influence on Lomonosov's views (p. 139-40); travels of S. G. Glotov, 1758-62 and his description of the Aleutian Islands (p. 263-83); comments on Lomonosov's views on the origin, classification, amount and distribution of arctic marine ice and on his concept of an arctic sea route starting from between Spitsbergen and Greenland, a variant of the Northwestern Sea Route (p. 141-214).

Part 2 is a documented outline of Lomonosov's efforts toward the realization of his plans, and his participation in preparations for Chichagov's and Krenitsyn's expeditions.

Part 3 contains a documented account of the Northwestern Sea Route expedition under Captain V. Ā. Chichagov in 1765 and 1766, its preparation, equipment, the two voyages to Spitsbergen and failure to penetrate farther. Notes on the voyages of Ākov Chirakin, who in 1766 discovered Matochkin Shar, and of Fedor Rozmyslov, who in 1768-69 attempted to penetrate through this strait into the Kara Sea (p. 427-30); on the expedition to the Aleutian Islands and Alaska under Captain Krenitsyn, 1764-71, supplemented by notes on Northeastern expedition of I. Billings and G. A. Sarychev in 1785-93, who explored Aleutian Islands and northwestern coast of America (p. 460-64).

Supplement (p. 467-91) contains documents on Lomonosov's arctic activities. Appended are an index of names and bibliographical index. *Maps* include Lomonosov's arctic map (fold. between p. 140-41), indicating sea routes he planned, and maps of routes of the expeditions of Chichagov (p. 395) and Krenitsyn (p. 457). **Copy seen:** DLC.

**25035. PEREZ, MICHEL.** Glaciologie. (In: Victor, Paul-Émile, and others. Rapport préliminaire de la campagne au Groenland 1949, pub. 1950, p. 25-27). Text in French. **Title tr.:** Glaciology.

"Surface stratifications in Greenland were studied to the 7-m. depth by direct observation, ramming, and hardness and density profiles. Temperature distribution within the inland ice was measured by resistance and mercury thermometers at depths of 15 m., 25 m. and 36 m. Ablation measurements were made three times over a six-week span. The findings when compared with those of Wegener in 1933 indicate a decline in mean precipitation, thinner and less dense annual

layers, and similar temperature, accumulation and ablation values. Further observations are recommended."—SIPRE.

**25039. PERMINOV, G. N.** Obzor vidov roda *Eumicrotremus* Gill. (Akademiia nauk SSSR. Dal'nevostochnyi filial, Vladivostok. Vestnik, 1936. No. 19, p. 115-29, illus.) **Title tr.:** A review of the species of the genus *Eumicrotremus* Gill.

**Contains** a critical revision of six species and two new forms of fishes of the genus *Eumicrotremus*, with a table for the determination of the species, synonymy, descriptions, list of localities in the Far Eastern seas and data on distribution; bibliography (28 items). Summary in English. **Copy seen:** DLC; MH-A.

**25040. PERROUD, PAUL.** Navigation terrestre. (In: Victor, Paul-Émile, and others, Rapport préliminaire de la campagne au Groenland 1949. Paris, 1950, p. 22-24) **Title tr.:** Terrestrial navigation.

**Contains** a statement of the problems of navigation on the Greenland icecap, which resemble those of the open sea, followed by sections on calculating and keeping direction; measuring distances; use of the flight compass; astronomical determinations; instruments and methods used; sources of error, etc.

**Copy seen:** CaMAI.

**25041. PERRY, EDWARD L., and B. T. HORTON.** Use of pyribenzamine in prevention of histamine-induced gastric acidity and headache and in treatment of hypersensitivity to cold. (American journal of the medical sciences, Nov. 1947. v. 214, p. 553-58, 3 fig., table)

**Contains** a study of the antihistaminic properties of pyribenzamine, and its effect on the symptoms of hypersensitivity to cold. Three patients of the latter category were studied; the drug was of some value in reducing the severity or duration of symptoms but it was not found to be a cure for cold hypersensitivity. Bibliography (8 items).

Contains data (collected in summer 1917) on an area (counties of Kuusamo and Kuolajärvi) between 66°10' and 67°10' N. lat. and another area (1914-15, 1918) 340 miles south, with which comparisons are made. The relation of numerous plants to calcium carbonate under differing terrain, vegetation, and climate conditions is described.

Investigation was made (1) to determine influence of lime in the soil upon distribution of phanerogamic plants (and ferns), also its influence on composition

of the plant associations; (2) to discover reason for this influence. The floristic composition of about 900 plant associations situated in soil high or low in lime were investigated and compared. Distribution of plants in these regions and throughout Finland in relation to lime in the soil was worked out and compared with results from these plant association studies. Summary in English, p. 236-45.

**25055. PETITOT, ÉMILE FORTUNÉ STANISLAS JOSEPH, 1838-1917.** Vocabulaire français-esquimau; dialecte des

Tehigit des bouches du Mackenzie et de l'Anderson; précédé d'une monographie de cette tribu et de notes grammaticales. Paris, E. Leroux; San Francisco, A. L. Bancroft co., 1876. 3 p. l., lxiv, 75, [1] p. illus. (Bibliothèque de linguistique et d'ethnographie américaines, publiée par A. L. Pinart. v. 3) **Title tr.:** French-Eskimo vocabulary; dialect of the Tshigit at the mouth of the Mackenzie and Anderson Rivers; with a monographic introduction on this tribe and some grammatical notes.

Contains besides a summary of the grammar (p. xxxix-lxiv), and an extensive vocabulary (75 p.) of the Mackenzie Eskimos, some account of the Eskimo language generally, its agglutination, use of suffixes and prefixes, similarities and differences among several Eskimo dialects. The monograph (p. ix-xxxvi) gives names and locality of 18 Eskimo tribes (numbering about 2000) in Canada and Alaska. The Mackenzie Eskimos are discussed in detail; their mode of life, racial appearance and mental characteristics, more common diseases; clothing, summer and winter dwellings (with diagrams) and their equipment; implements, sledges and boats; nomadic life, fishing and hunting seasons, preparation of food, trade; the Eskimo knife and its use, walrus and mammoth ivory carvings, etc. The Asiatic origin of Eskimos, the author finds borne out by their traditions, customs and utensils. He lived and traveled as Oblate missionary in north-western Canada 1862-82 and had visited Eskimo groups five times, twice in 1869 and 1870, spending the summer among them, before compiling this vocabulary.

**25060. PETROV, VALERIAN GAVRILOVICH.** Naledi na Amursko-Ĭakutskoi magistrali. Leningrad, Izd-vo Akademii nauk SSSR i Nauchno-issl. avtomobil'-nodorozhnogo in-ta, 1930. 2 v.: 177 p. 44 illus., maps, 3 fold. diagrs.; and atlas 2 p., 36 l. (120 profiles) 21 x 30 cm. **Title tr.:** Naleds along the Amur-Yakutsk main line.

Contains a study of naleds along the 1300 km. of this line, during the winter of 1927-28. The text consists of three parts: (1) an investigation of naleds and ice conditions along the line (p. 19-130) including a general and a detailed point by point description of naleds and other frost phenomena and their dynamics; (2) account of the struggle with naled (p. 131-60) dealing with naled types and means of combatting them and (3) general conclusions of the study and of preventive measures including construction of "frost belts" (p. 161-77).

Atlas contains 120 plans or profiles of naleds along the line, drawn to scale and exactly dated. Several plans include projected or actual "frost belts," i. e. wide, usually flat, ditches dug near the road, which cause extensive freezing thus "withdrawing" naleds from the road.

Tungus-Manchu peoples have a lunar-natural year consisting of four to seven seasons, also of twelve to fourteen smaller periods called moons, of which the names are quoted and analyzed. The Lamuts have a logical and peculiar system of naming the months according to parts of the body. The Manchus have taken over

the Chinese system. The others have mostly names suggestive of natural phenomena and economic activities. A Tungus month can have 15, 20, or some other number of days. In earlier times a winter "year" and a summer "year" were distinguished. The days are counted by "nights", and can be divided in four to seventeen unequal parts.

**Copy seen:** DGS.

**25072. PÉWÉ, TROY LEWIS, 1918-** . Permafrost and geomorphology in the lower Yukon valley, Alaska. (Geological Society of America. Bulletin, Dec. 1947. v. 58, no. 12, pt. 2: 1256)

"The Yukon flood plain near Galena, Alaska, has four geomorphic phases, and each phase has distinctive permafrost characteristics. The term phase refers to the temporary appearances of the surface features produced by a meander during the planation of the valley. The characteristics of the 4 phases are as follows: (phase 1) youthful drainage pattern, large deciduous trees, and low permafrost table; (phase 2) youthful drainage pattern, large coniferous trees and slightly higher permafrost level; (phase 3) mature drainage pattern, small coniferous trees and tundra, and a high permafrost table; (phase 4) old-age drainage pattern, much tundra, and a high permafrost table. The river, moving from side to side in the valley, acts as a thawing agent and lowers the permafrost table. When the river

meander advances, the permafrost rises into the newly deposited sediments. The rise of the permafrost over the years causes the change in vegetation." (Author's abstract).

**25073. PÉWÉ, TROY LEWIS, 1918-** . Preliminary report of permafrost investigations in the Dunbar area, Alaska. Washington, D. C., Feb. 1948. 3 p. incl. map, diagr. (U. S. Geological Survey. Circular 42)

"The Dunbar area is a 20 mi. strip along the Alaska Railroad from Standard to Berg, withdrawn by the government for agricultural settlement. The altitude of the hills ranges from 1200 to 2000 ft. and the altitude of the lowlands averages 400 ft. The drainage is poor in the depositional slope which consist of the lower parts of the hills and the valleys. The depth to permafrost in this slope is 12-24 in. Large ice masses in the soil make construction difficult. Ground water for water supplies is not available at shallow wells. Water is available under the permafrost which often exceeds a depth of 150 ft. The hills are well drained and free of permafrost. It is suggested that the hills were more suitable for construction and for agriculture. Water supplies are still a problem because wells must continue down to bedrock for water."—SIPRE.

Abstract of a paper read before the November 1950 meeting of the Geological Society of America, giving description of permafrost effects in (1) zone underlain by sand and gravel, where no mounds or pits form after clearing, and (2) zone underlain mostly by silt where

mounds and thermokarst pits render the acreage unfit for cultivation two or three years after clearing. **Copy seen:** DGS.

**25076. PÉWÉ, TROY LEWIS, 1918-** Terrain and permafrost of the Fairbanks area, Alaska. (Geological Society of America. Bulletin, Dec. 1948. v. 59, no. 12, pt. 2, p. 1379) Abstract of a paper read before the April 1948 meeting of the Geological Society of America.

"The Fairbanks area, located on the north side of the Tanana Valley adjacent to the Yukon-Tanana plateau, is divided into three geomorphic units: (1) the flood plain, (2) the hills, and (3) the depositional slope, between the hills and the flood plain. Each unit has distinctive lithology and permafrost conditions." Author describes terrain, permafrost conditions of each unit, noting its agricultural possibilities. **Copy seen:** DLC.

**25077. PFALZNER, P. M.** On the friction of various synthetic and natural rubbers on ice. (Canadian journal of research, Section F, Dec. 1950. v. 28, no. 12, p. 468-89, diagrs., tables)

Contains a study on the frictional properties of rubber tire compounds on ice, under controlled conditions, with the aim of ascertaining the factors influencing these properties. The dynamic and static friction on ice, the hardness and resilience of natural and synthetic rubber tire compounds were measured; in general, friction is increased as temperatures are lowered and that the coefficient of friction between ice and rubber depends on the nature and hardness of the rubber.

**25078. PFIZENMAYER, EUGEN WILHELM.** Beitrag zur Morphologie von *Elephas primigenius*, Blumenb. und Erklärung meines Reconstructions-Versuches. (Vserossitskoe mineralogicheskoe obshchestvo, Leningrad. Zapiski, 1905. Ser. 2, chast' 43, vyp. 2, p. 521-42, illus., plate 7) **Title tr.:** A contribution to the morphology of the mammoth, *Elephas primigenius* Blumenb. with an explanation of my attempt at the restoration.

Contains the results of the author's attempt at a restoration of the northern woolly mammoth, based on study of the skeleton in the Zoological Museum of the Academy of Sciences, which had been found in the lower Lena River region in 1806, and on investigation of the remains brought home from the Berezovka River, by O. F. Gerfs and the author in 1901.

Also on specimens of tusks and other parts of the body found or bought by the author during his Siberian travels. A colored sketch of author's idea of this extinct animal is given on plate 7.

**Copy seen:** MH-Z.

**25079. PFIZENMAYER, EUGEN WILHELM.** Les mammouths de Sibirie. La découverte de cadavres de mammouths préhistoriques sur les bords de la Berezovka et de la Sanga-Iourakh. Avant-propos et traduction du George Montandon. Paris, Payot, 1939. 313 p., illus., plates, map. **Title tr.:** The mammoths of Siberia. The uncovering of carcasses of prehistoric mammoths on the banks of the Berezovka and the Sanga-Yuryakh. Translated with introduction by George Montandon.

Contains a translation of the original German *Mammulleichen und Urwaldmenschen in Nordost Siberien*, 1926, q. v. Many illustrations and bibliography are omitted. **Copy seen:** DLC.

**25080. PFIZENMAYER, EUGEN WILHELM.** Mammulleichen und Urwaldmenschen in Nordost Siberien. Leipzig, Brockhaus, 1926. 341 p. illus. plates, maps. **Title tr.:** Mammoth carcasses and primitive men in northeastern Siberia.

Contains an account of a three-man expedition under O. F. Gerfs in 1901 to the Berezovka River, right tributary of the Kolyma (66°30' N. 157°20' E.) and the party's work there exhuming a mammoth cadaver; also a shorter account (p. 146-239) of the author's second trip, in 1908, with K. A. Vollosovich as geologist, to the Sanga-Yuryakh River (72°18' N. 144°25' E.) and their exhumation of another mammoth, both expeditions for the Russian Academy of Sciences. Itineraries are given (in 1901 from Irkutsk down the Lena and Yana to Verkhoyansk, thence eastward overland to Sredne-Kolymsk; in 1908 down the Lena and Yana to Ust-Yansk returning by Bulun up the Lena to Irkutsk); description of the country traversed; its nature, climate, main flora and fauna; people (Yakuts, Tungus), their life and habits; occupations, housing, dress, etc. Detailed accounts are given of the carcasses exhumed; their location; posture; missing or well-preserved parts; detailed description of the non-decomposed parts (hair; skin; muscle; food remnants, etc.), dismemberment, transport and assembling of the carcasses; etc. A description of

the assembled animals and some of their contemporaries (especially extinct forms) is also given. Bibliography (over 40 items). 118 photographic illus. and sketches in text depict terrain and native life as well as mammoth remains, sites etc. Fold. map shows sites of 21 other finds of mammoth and rhinoceros remains in Siberia and islands 1707-1910, outlined in the introductory chapter.

Contains historical sketch of the region; economic activities of the Tungus; transportation of tea through the port of Ayan, reindeer-breeding, fishing in the rivers and sea, hunting, dog-breeding, household work, and casual labor; material aspects of their life, and summary of the economy as a whole; Tungus nomadism; comparison of the local population of which 245 are Tungus; their family life, beliefs and customs, social organization and paying of taxes. These materials were collected largely by the senior author during 1903-05 while on an expedition organized by the Yakut district administration and directed by the engineer V. E. Popov. Its purpose was to find a route between the village Nel'kan on the Maya River and port of Ayan; and in the process Pekarski collected extensive data on the economic situation of the Tungus, also assembled about 400 museum objects. After his departure, this work was continued by V. P. Tsvetkov who prepared the material for publication. Parts of it were published previously in *Zhivaiia starina* (1911, vyp. 2-4), and *Sibirskie voprosy* (1911, no. 9-10).

1951. 37 p., illus. (National Research Council. Division of Building Research. Technical report, no. 8, D. B. R. no. 22)

A joint contribution from the Directorate of Engineer Development, Canadian Army and the Division of Building Research. Report from a four-man party summer 1950 expedition.

"Two hundred fifty permanent buildings were investigated. Two general methods of foundation construction are used in permafrost regions. Procedures involving the removal or the continual thawing of the permafrost is called the active method. Construction techniques in which the permafrost is undisturbed and maintained by insulation is called the passive method. Surface foundations were found unsatisfactory. Pile driving, concrete pad footings, and concrete wall footings constitute satisfactory buried foundations when constructed on suitable sites."—SIPRE. **Copy seen:** CAMAI.

Contains a critical revision of hermaphroditic forms of herbaceous genus *Valeriana* in Sweden, with Latin and Swedish diagnoses of four species (one new), some varieties and three hybrids, with synonymy and notes on origin and distribution; includes *V. excelsa*, native to northern Sweden and Norway (Varangerfjord) and *V. officinalis* f. *hirsuta* from Norrland, Sweden, and Sydvaranger, Norway. Summary in German.

**Copy seen:** DLC; MH-A.

**25114. \*PLESKE, FEDOR DMITRIE-VICH, 1858-1932.** Études sur les Stratiomyinae (Diptera) de la région paléarctique. (Notulae entomologicae, 1924. Arg. 4, häft. 1, p. 14-25; häft. 3, p. 65-73) **Title tr.:** Studies on Stratiomyinae (Diptera) of the palaearctic region.

Contains synoptic tables for the determination of palaearctic species of the dipterous genera *Alliocera*, *Oreomyia* and *Stratiomyia* (fam. Stratiomyinae), also critical notes (in French) and Latin diagnoses of more interesting or little known species, including *Stratiomyia*

\*Latterly known as Theodore Pleske.

(*Laternigera*) *furcata* from Kamchatka and S. (*Metastratiomyia*) *validicornis* validicornis from Arkhangel'sk province (Pechora River) and Kamchatka (Petro-pavlovsk). **Copy seen:** DLC; MH-Z.

**25115. PLESKE, FEDOR DMITRIE-VICH, 1858-1932.** Kriticheskiĭ obzor mlekopitaushchikh i ptits Kol'skogo poluoostrova. Sanktpeterburg, 1887. 536 p. (Akademiĭa nauk SSSR. Zapiski, t. 56, prilozhenie no. 1) **Title tr.:** Critical revision of mammals and birds of the Kola Peninsula. Also published in German: *Übersicht der Säugetiere und Vögel der Kola-Halbinsel*, 2 v., 1884-86 (see *Arctic Bibliography*, No. 13580).

Contains a physico-geographic sketch of the Kola Peninsula, including Finnish and Swedish Lapland explored by the author in the summer of 1880 during the expedition of the St. Petersburg Society of Naturalists, p. v-xix; a bibliography (278 items), an enumeration of 49 terrestrial and marine mammals from White and Barents Seas (p. 24-165); and a systematic list of 205 birds (p. 167-514) with synonymy, Latin, Russian, Finnish, Lappish and local names, biological and ecological notes and data on distribution in the region explored. Indexes of Latin and Russian names are appended.

**Copy seen:** MH-Z.

**25116. PLESKE, FEDOR DMITRIE-VICH, 1858-1932.** Revue critique des genres, espèces et sous-espèces paléarctiques des sous-familles des Stratiomyiinae et des Pachygastrinae (Diptères). Akademiĭa nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1922. t. 23, no. 3-4, p. 325-38) **Title tr.:** Critical revision of the palaearctic genera, species and subspecies of the sub-families Stratiomyiinae and Pachygastrinae.

Contains a critical revision of the genera, species and subspecies of dipterous sub-families Stratiomyiinae and Pachygastrinae with Latin diagnoses of several new taxonomic units and data on their distribution; includes some species from eastern Siberia, one from Yakutsk region.

**Copy seen:** DLC; MH-Z.

**25117. PLESKE, FEDOR DMITRIE-VICH, 1858-1932.** Revue des espèces paléarctiques de la famille des Cyrtidae. (Diptera) (Konowia, 1930. Bd. 5, Heft 2, p. 156-73) **Title tr.:** A review of palaearctic species of the family Cyrtidae (Diptera).

Contains synoptic tables of the sub-

families, genera and species of the dip-  
terous fam. *Cyrtidae*, synonyms, critical  
notes, data on geographic distribution and  
Latin diagnoses of seven new species;  
based on the study of specimens in the  
collection of Dipeta in the Zoological  
Museum of the Academy of Sciences of  
U.S.S.R. Includes *Oncodes jacutenses*  
n. sp. from Yakutia and *O. nigripes*  
native to Lapland.

**Copy seen:** MH-Z.

**25118. PLESKE, FEDOR DMITRIE-  
VICH, 1858-1932.** Revue des espèces  
paléarctiques, des Oestridae et catalogue  
raisonné de leur collection au Musée  
Zoologique de l'Académie des Sciences.  
(Akademii nauk SSSR. Zoologicheskii  
muzel. Ezhegodnik, 1925, pub. 1926.  
t. 26, vyp. 3-4, p. 215-30) **Title tr.:**  
Revision of palaearctic species of Oe-  
stridae and descriptive catalog of those  
in the Zoological Museum of the Academy  
of Sciences.

**Contains** a key to the genera of dip-  
terous fam. Oestridae and a critical  
revision of 38 palaearctic species of bot-  
flies (five new) from various regions in  
the collection of the Zoological Museum  
of the Academy of Sciences of U.S.S.R.,  
with Latin descriptions, synoptical tables  
and data on distribution; includes at  
least four species native to northern  
European Russia and Siberia.

**Copy seen:** DLC; MH-Z.

**25119. PLESKE, FEDOR DMITRIE-  
VICH, 1858-1932.** Supplément à mes  
travaux sur les Stratiomyidae, Erinidae,  
Coenomyidae et Oestridae paléarctiques  
(Diptera). (Konowia, 1928. Bd. 7,  
p. 65-87) **Title tr.:** A supplement to  
my papers on palearctic Stratiomyidae,  
Erinidae, Coenomyidae and Oestridae  
(Diptera).

**Contains** a systematic list of several  
dipters, with keys, critical notes, de-  
scriptions of seven new species and data  
on geographic distribution. Includes  
*Erinna* (*Archimyia*) (Yakutia), *E. ma-  
culata* (Koroviy Island in Okhotsk Sea)  
and *E. (Xylophagus) cinctus* (Pechora  
River region). This paper supplements  
some of the author's earlier papers,  
Pleske 1922, 1924 and 1926, q. v.

**Copy seen:** MH-Z.

**25120. PLESKE, FEDOR DMITRIE-  
VICH, 1858-1932.** Über einige der  
genaueren Definition bedürftige *Chrysops*-  
Arten aus dem palaearktischen Fau-  
nengebiete (Diptera, Tabanidae). (Aka-

demii nauk SSSR. Zoologicheskii  
muzel. Ezhegodnik, 1910. t. 15, no. 4,  
p. 436-56, plate 5) **Title tr.:** On some  
species of *Chrysops* of the palaearctic  
fauna requiring more exact determination.

**Contains** a critical revision of five  
species of dipterous genus *Chrysops*,  
often confounded with other related  
species; with Latin diagnoses, synonymy,  
extensive critical notes and data on  
habitat; includes *C. maurus* from the  
Muonio region and Kuusamo, northern  
Finland.

**Copy seen:** DLC; MH-Z.

**25121. PLESSO, G. I.** Sostofanie  
perifericheskoi innervatsii pri otmoroz-  
zhenii. (Nevropatologiya i psikhiatriya,  
Sept.-Oct. 1947. t. 16, no. 5, p. 56)  
**Title tr.:** State of peripheral innerva-  
tion in frostbite.

**Contains** a note on observations of 50  
cases of severe frostbite, mostly of the  
4th degree; some reflexes on the most  
injured sites were heightened or lowered,  
the tonus of some muscles lowered,  
suggestions of muscle and skin atrophy  
were in evidence. Author does not con-  
sider all this as symptoms of a simple  
neuritis but as signs of over-activation  
of the adreno-sympathetic system caused  
by the severe exposure to cold; he offers  
general therapeutic directives.

**25122. PLIS, D. S.** O vnutrikho-  
zjalstvennom planirovanii v olenevod-  
cheskikh sovkhovakh. (Karelo-Murman-  
skii kraj, 1933. v. 11, no. 7-8, p. 62-65;  
no. 9-10, p. 65-68, illus.) **Title tr.:**  
On intra-economical planning in reindeer-  
breeding state farms.

**Contains** (in the first part) data on the  
number of reindeer on the state-operated  
farms (sovkhov) and the amount of  
meat produced by them. On the basis of  
available pastures, especially in Kola  
Peninsula, the author outlines a plan for  
more specialized and intensive reindeer  
farming involving not only a utilization  
of meat but also of the hides and by-  
products. In the second section of the  
article this plan is presented in detail  
and related to the data on growth and  
reproduction rate of the animals and to  
proper organization and rationalization  
of pastures.

**25125. PLUMMER, HARRY CHAPIN.** Arctic sea trade expansion. Canada's third sea demands attention from cargo carriers. Power and speed will be paramount in special-design ships. (Canadian shipping, Dec. 1950. v. 22, no. 3, p. 38-41, illus.)

Sketch with photographic illustrations of several vessels recently assigned to navigation in Western arctic waters, the *C. D. Howe*, *Rupertsland*, *Calanus*, *Snow-bird II*, *Distributor* (on the Mackenzie River); with notes on navigation conditions and ship design.

**Copy seen:** CaMAI.

**25126. PLUMMER, HARRY CHAPIN.** Canada hunts minerals. (Popular mechanics, Nov. 1948. v. 90, no. 5, p. 156-59, 256, 258, illus.)

Sketch of aerial photography (vertical and tri-camera) geological survey, and prospecting, particularly for radio-active minerals. Use of magnetometer, gold-leaf electroscope, and other instruments is noted.

**Copy seen:** DLC.

**25127. PLUVINAGE, PHILLIPE, and G. TAYLOR.** Mesures du champ électrique de l'atmosphère au Groenland entre le niveau de la mer et le centre de l'inlandsis. (Annales de géophysique, Jan.-Mar. 1950. t. 6, no. 1, p. 69,

tables) **Title tr.:** Measurements of the atmospheric electric field in Greenland between sea level and the center of the icecap.

"The author presents the results of measurements of the electric field of the atmosphere in Greenland [made during the French polar expeditions under P. É. Victor] during the summers of 1948 and 1949. The atmospheric electricity increases from the coast to the icecap. In the case of the coastal station and the most inland station the values obtained during 1948 and 1949 were of the same order of magnitude, about 70 and 120 volts respectively; for the intermediate station the values differed considerably. The electric field over the icecap is characterized by marked daily variations. Negative potential values were observed in 1948 but not in 1949."—*Meteorological abstracts and bibliography*, Jan. 1951, v. 2, no. 1, p. 39-41.

**Copy seen:** DLC; MH-BH.

**25128. PLUVINAGE, PHILIPPE.** Sur la pollution de l'air au Groenland. (Annales de géophysique, 1950. t. 6, no. 1, p. 68, table) **Title tr.:** Air pollution in Greenland.

On the basis of his work in the course of the French Arctic Expedition of P. É. Victor 1948, on the west coast of Greenland and border of the icecap, "the author describes the application of the method of H. Dessens to an investigation of atmospheric pollution in Greenland. The types of impurities resemble those found in France, except that the proportion of dry particles is greater. The percentage of particles in the atmosphere of Greenland is among the lowest hitherto recorded."—*Meteorological abstracts and bibliography*, Jan. 1951. v. 2, no. 1, p. 15.

**Copy seen:** CaMAI; DLC.

**25133. POLAR RECORD.** The Arctic Council of 1851. (Polar record, Jan. 1952. v. 6, no. 43, p. 385-91, plate, diag.)

Contains reproduction of engraving after painting by Stephen Pearce, of the group of prominent "Articists" appointed by British Admiralty to supervise plans for Franklin search expeditions. A key to the engraving by W. R. O'Bourne is reprinted together with biographical notes on the ten council members depicted. **Copy seen:** DLC.

**25134. POLAR RECORD.** Biological work in Keewatin and northern Manitoba. (Polar record, July 1950. v. 5, no. 40, p. 601-602)

Contains note on the trip to the Nuel-tin Lake region by Francis Harper (May-Dec. 1947) and Farley M. Mowat (May-Aug.). Mowat's itinerary and work (faunal survey and collection along the Windy River) are indicated. Sketch maps, numerous photographs and comprehensive collections were made.

**Copy seen:** DLC.

**25135. POLAR RECORD.** British West Greenland expedition, 1950. (Polar record, July 1951. v. 6, no. 42, p. 263-64)

Contains a note and brief itinerary of this summer expedition headed by H. I. Drever. Glaciological studies of the Johannes-Brae and Rinks-Isbrae at the head of Karrats-Fjord (71°30' N. 53° W.) were carried out by one part of the group, while the other made a geological survey of the coast between 70°35' and 72°18' N. **Copy seen:** DLC.

**25136. POLAR RECORD.** Canadian Department of Mines and Resources exploring expedition to Foxe Basin, 1949. (Polar record, July 1951. v. 6, no. 42, p. 256-57, illus., map)

*Contains* a note on a seven-man expedition, leader T. H. Manning, to fix positions of the recently discovered (or re-discovered) islands: Prince Charles, Air Force and Foley in eastern Foxe Basin and to study the geography, geology, zoology and botany of these islands. *Nauja*, a new Peterhead boat used, is noted and illustrated.

*Copy seen:* DLC.

**25137. POLAR RECORD.** Caribou investigations in the Canadian Arctic. (Polar record, July 1951. v. 6, no. 42, p. 253-55)

Summary of work begun in 1948 by Canadian Wildlife Service as part of a program to develop a policy for management of Barren Ground caribou, depletion of the herds having reduced a natural source of the native population's food, clothing and other necessities. Personnel and scope of the investigation (caribou range, population, food supply, reproduction, migrations, utilization, and predator relations) are indicated. Aerial reconnaissance and ground observations, Apr. 1948-Feb. 1949 in the region Hudson Bay-Mackenzie and Slave Rivers-arctic seas, also literature research are outlined.

*Copy seen:* DLC.

**25138. POLAR RECORD.** Cosmic ray investigations in the Canadian Arctic, 1949-1950. (Polar record, Jan. 1951. v. 6, no. 41, p. 102-103)

*Contains* note on an expedition to Churchill, led by M. A. Pomerantz and sponsored by the National Geographic Society and the Bartol Research Foundation of the Franklin Institute at Swarthmore, Pa. The object was to determine whether intensity of cosmic rays at high altitudes increases with geomagnetic latitude. Simultaneously John Galt of the Dominion observatory, commenced making magnetic and other observations at Resolute (74°41' N. 95°55' W.) which were to be continued through 1950.

*Copy seen:* DLC.

**25139. POLAR RECORD.** Danish expeditions to West Greenland, 1949. (Polar record, Jan. 1951. v. 6, no. 41, p. 103-104)

*Contains* brief notes on: two surveys in preparation for later mapping on Disko

on both sides of 66° N. lat. parallel, and between 69° N. and 76°30' N. lat.; expeditions of Grønlands Geologiske Undersøgelser i Vestgrønland and their geological surveys of Nugssuaq, an area northeast of it, the vicinity of Godthaab, Sukkertoppen and Egedesminde; expedition of Kryolitselskabet Oresund A/S for mapping of the cryolite mine at Ivigtut and doing magnetic and geological work in other areas; marking of cod and shark; ethnological, archeological and zoological research.

*Copy seen:* DLC.

**25140. POLAR RECORD.** Danish Pearyland expedition 1948-50. (Polar record, Jan. 1952. v. 6, no. 43, p. 377-78)

*Contains* a brief note on the expedition, leader and archeologist, Eigil Knuth; its transportation, work program, personnel of the second (1949-50) wintering party, etc. For reports on previous years (1947, 1948-49), see *Polar record*, 1949-50, v. 5, no. 35/36, p. 201-202; v. 5, no. 39, p. 458-59.

*Copy seen:* DLC.

**25141. POLAR RECORD.** Dansk Ekspeditionsfond. (Polar record, Jan. 1952. v. 6, no. 43, p. 395-96) *Title tr.:* Danish Expedition-Fund.

*Contains* information on the genesis of the Fund during World War II; its formal establishment in 1947; objects; governing board; means of obtaining funds; distribution of funds among different expeditions, etc.

*Copy seen:* DLC.

**25142. POLAR RECORD.** Dartmouth College expedition to Labrador, 1950. (Polar record, Jan. 1952. v. 6, no. 43, p. 376)

*Contains* a note on hydrographical and biological studies made in July-Aug. from the *Blue Dolphin* (David C. Nutt, captain and leader). Tidal observations, bottom samples and cores, and fishes were collected in the Hamilton Inlet-Lake Melville area. Similar studies were conducted in Seven Islands Bay (59°10' N. 64° W.)

*Copy seen:* DLC.

**25143. POLAR RECORD.** Dr. H. B. Collins' archaeological excavations at Frobisher Bay, Baffin Island, and at Resolute Bay, Cornwallis Islands, 1948 and 1949. (Polar record, July 1951. v. 6, no. 42, p. 255)

*Contains* a note on excavations (in 1948) of houses at the head of Frobisher Bay. The houses were built of stone, whale bones and turf and contained stone

implements of the Thule type. Cape Dorset type artifacts were found in adjacent middens at deeper levels. Resolute Bay excavations (in 1949) brought to light houses similarly built, containing, however, only objects of pure Thule type.

**Copoly seen:** DLC.

**25144. POLAR RECORD.** Dr. L. Koch's geological expedition to East Greenland, 1949. (Polar record, Jan. 1951. v. 6, no. 41, p. 104-105)

Contains a short report and itinerary of the summer expedition led by Lauge Koch; its main object was to study the lead-bearing quartz veins discovered in 1948 at Mesters Vig, southern Kong Oscars Fjord (72°22' N., 24° W.). 1800 photographs of the area were made from the air; numerous quartz-bearing veins nearly all containing lead, were discovered west of Mesters Vig; ice reconnaissance flights were made over the sea between Scoresby Sund and Danmarks Havn, etc.

**Copoly seen:** DLC.

**25145. POLAR RECORD.** Dr. L. Koch's geological expedition to East Greenland, 1950. (Polar record, Jan. 1952. v. 6, no. 43, p. 378-79)

Contains a short note and itinerary of the 120-man expedition by aircraft and boats. 24 members conducted mapping and tectonic and stratigraphic studies; 80 members led by Lester Thompson and Carl Koch continued investigations of the lead-bearing beds in Kong Oscars Fjord (72°22' N. 24° W.) with the aim of their exploitation. The expeditions are financed by the Danish Government.

**Copoly seen:** DLC.

**25146. POLAR RECORD.** Durham University expedition to Svartisen, Norway, 1950. (Polar record, Jan. 1952. v. 6, no. 43, p. 380-81)

Contains a brief note on this expedition which had as its object the mapping of Engendalen and Fondalen near Svartisen, an icecap (some 250 miles north of Trondhjem) known to have receded since the end of the 19th century. P. F. Taylor, glaciologist was leader. Meteorological data, plants and some 4000 insects were collected.

**Copoly seen:** DLC.

**25147. POLAR RECORD.** Eastern Arctic patrol vessel C. D. Houe. (Polar record, July 1951. v. 6, no. 42, p. 271-72)

Contains summary statement of the patrol vessels chartered by Canadian government since 1922 (the first patrol),

dimensions, equipment, function of this new (the first government-owned) ship.

**Copoly seen:** DLC.

**25148. POLAR RECORD.** Establishment of joint Canadian-United States meteorological stations in the Canadian Arctic, 1947-49. (Polar record, July 1950. v. 5, no. 40, p. 602-605, map)

"Expeditions by air and sea in 1947 and 1948 resulted in the establishment of the following stations in the Canadian Arctic: (1) Eureka, Ellesmere Island; (2) Resolute, Cornwallis Island; (3) Mould Bay, Prince Patrick Island, and (4) Isachsen, Isachsen Island. An automatic station was established at Dundas Harbour in 1947. An attempt in 1949 to establish a fifth station near Cape Sheridan failed. The author relates some of the interesting incidents of several expeditions."—*Meteorological abstracts and bibliography*, Apr. 1952. v. 3, p. 319.

**Copoly seen:** DLC; MH-BH.

**25149. POLAR RECORD.** Expedition of Norsk Polarinstittutt to Jan Mayen, Spitsbergen and North-East Greenland, 1950. (Polar record, July 1951. v. 6, no. 42, p. 265-67)

Contains notes on (1) the survey of Jan Mayen made in the summer of 1950 and tidal observations carried out for a period of one month; (2) the annual expedition to Spitsbergen, 1950, which serviced the lights and automatic wireless beacons; carried out hydrographic work; examination of the coal-seams and collection of fossils; and some other scientific studies; (3) expedition to supply Norwegian companies' hunting stations between Kong Oscars Fjord and Hochstetters Forland and the wireless station at Myggbukta.

**Copoly seen:** DLC.

**25150. POLAR RECORD** Expeditions of Norsk Polarinstittutt to Svalbard, 1948. (Polar record, Jan. 1950. v. 5, no. 39, p. 453)

Contains a note on the Institute's annual expedition to Svalbard June 25-Sept. 17, 1948, led by K. Z. Lundquist, on the *Minna*, and another expedition led by R. von Krogh on the *Nordkyn*, mentioning the personnel and the hydrographic, trigonometric, geologic, ornithologic and other work carried out.

**Copoly seen:** CaMAI; DLC.

**25151. POLAR RECORD.** Expeditions of Norsk Polarinstittutt to Svalbard, Jan Mayen and North-east Greenland, 1949.

(Polar record, July 1950. v. 5, no. 40, p. 610-12)

Contains a brief report on (1) the expedition to Svalbard (on the *Minna*) and its work in hydrography, geology and geological mapping; coal prospecting and paleontology; botanical and ornithological work; (2) survey work on Jan Mayen, including astronomical, geomagnetic and topographic determinations, and aerial photographs, covering the whole island; (3) the expedition to north-east Greenland (on the *Quest*) the aim of which was to relieve the staff of the radio station at Myggbukta and trappers at the hunting posts. **Copy seen:** DLC.

**25152. POLAR RECORD.** French expedition to Greenland, 1949-50. (Polar record, July 1951. v. 6, no. 42, p. 258-62, map)

Contains brief report and itinerary of a 36-man expedition, Paul-Émile Victor leader, landing in Atâ Sund, West Greenland, to establish an icecap station on or near site of Wegener's Eismitte of 1930-31 (70°54' N. 40°42' W.). Organization, transportation and supply (by ship, aircraft and weasel) are noted; preparation of depot camps, installation of the central station and an eight-man wintering party, headed by Robert Guillard. During the winter 1949-50 scientific work included four surface weather observations daily, radiosondes, etc.

**Copy seen:** DLC.

**25153. POLAR RECORD.** German sealing cruise to East Greenland, 1950. (Polar record, July 1951. v. 6, no. 42, p. 262)

Contains a brief note of a three-man party's trip on the motor-ship *Sachsen* (136 tons, length 23 m.), skipper and leader H. Kriete. 1250 seals and one polar bear were taken. Seal skulls, skins, skeletons and a numbers of birds were collected by the zoologist aboard.

**Copy seen:** DLC.

**25154. POLAR RECORD.** Hudson's Bay Company vessels for work in the Canadian Arctic. (Polar record, July 1951. v. 6, no. 42, p. 272)

Contains note *Rupert Island*, *Fort Hearne*, and *Fort Garry* replacing the *Nascopie* (wrecked in 1947), *Fort Ross* and *Fort Severn* (to be withdrawn from service).

**Copy seen:** DLC.

**25155. POLAR RECORD.** The ice-breaker *Yermak*. (Polar record, July 1951. v. 6, no. 42, p. 272-74)

Contains a review of the history of the Russian ice-breaker *Yermak* from the time of Makarov's conception of developing the ice-breaking tug into a larger more powerful ship for use in Kara Sea shipping; construction, test runs 1899-1901; into Baltic service 1905; Northern Sea Route since 1934. The later *Krasin* (1917) and *Stalin*-type (1938) ice-breakers are noted and the award of the Order of Lenin to the *Yermak* in celebration of her 50th anniversary.

**Copy seen:** DLC.

**25156. POLAR RECORD.** Joint Canadian-United States exercise "Sweetbriar", 1950. (Polar record, July 1951. v. 6, no. 42, p. 258)

Contains a note on a ten-day defence exercise in Feb. 1950, directed against an "aggressor" assumed to be invading Alaska and Canada via the Alaska Highway. 5200 troops, 1000 motor vehicles, 100 aircraft took part.

**Copy seen:** DLC.

**25157. POLAR RECORD.** L. Z. Spetzman's botanical investigations in northern Alaska, 1946, 1947, 1948 and 1949. (Polar record, Jan. 1952. v. 6, no. 43, p. 366-67)

Contains brief note on the areas and collections: 2000 vascular plants (300 species) collected in 1946-48, along Brooks Range and the area lying between the mountains and the shores of Beaufort Sea; in the summer of 1949, 250 species of plants were collected at Anaktuvuk Pass, Willow Creek, Umiat, Point Barrow and some other localities. Summarized from notes in *Arctic*, 1949-50, v. 2, no. 2, p. 124; v. 3, no. 1, p. 71; no. 2, p. 122.

**Copy seen:** DLC.

**25158. POLAR RECORD.** Low temperature Laboratory of the National Research Council of Canada, Ottawa (Polar record, July 1952. v. 6, no. 44, p. 544-45)

Contains a summarized account of the Laboratory; its refrigeration machinery, chambers, tunnels, etc., and its aims, viz: to facilitate the study of the effects of cold on man, materials, equipment, machinery, clothing, etc. The full account appeared in a mimeographed paper by John L. Orr, entitled: *The low temperature laboratory of the National Research Council* (National Research Council of Canada, Quarterly Bulletin of Aeronautical Laboratories, Report ME-1948 (3)).

**Copy seen:** CaMAI; DLC.

**25159. POLAR RECORD.** Magnetic observations in the Canadian Arctic, 1947-49. (Polar record, July 1951, v. 6, no. 42, p. 247-53, map)

*Contains* summary of earlier work to locate the magnetic pole; instrumentation and personnel of the 1947 ("Polco") operation; itinerary and list of stations where successful observations were made; additional magnetic observations north of Lancaster Sound and Barrow Strait; Operation Magnetic 1948, 1949; data on North Magnetic Pole (position approx. 72°30' N. 98°30' W. on northern Prince of Wales Island), its normal and abnormal orbit; establishment of two permanent stations (Baker Lake and Resolute Bay) for the continuous study of changes of the magnetic pole; Operation Magnetic (1948) with the object to establish new magnetic stations north and west of Prince of Wales Island for better determination of the position of the magnetic pole; Operation Magnetic in 1949; its aims; personnel, itinerary; achievements.

*Copy seen:* DLC.

**25160. POLAR RECORD.** Oceanographical investigations at Point Barrow, Alaska, 1949. (Polar record, July 1950, v. 5, no. 40, p. 619)

*Contains* a note on the initiation and initiators of long-term oceanographic research at Point Barrow and on the preliminary work and test of equipment and facilities conducted by William G. Metcalf and John F. Holmes, who supplied the present information.

*Copy seen:* DLC.

**25161. POLAR RECORD.** Ornithological expedition to the Perry River, 1949. (Polar record, July 1950, v. 5, no. 40, p. 618)

*Contains* a note on the expedition of P. M. Scott with H. C. Hanson and P. Queneau in northeast Mackenzie District; the itinerary and research conducted; the latter concerned study of wild geese and other waterfowl of the area and search for their breeding grounds geographical and meteorological observations; photographs and a color film covering the expedition's work were taken.

*Copy seen:* DLC.

**25162. POLAR RECORD.** Oxford University expedition to Norwegian Lapland, 1950. (Polar record, Jan. 1952, v. 6, no. 43, p. 381)

*Contains* a brief note of this summer expedition led by F. White, botanist;

its studies of peat formation, collecting of lichens, mosses and other little-understood plant groups, mapping, studies of blood-groups among the Lapps, etc.

*Copy seen:* DLC.

**25163. POLAR RECORD.** Professor N. J. Polunin's botanical work in the American Arctic, 1946-49. (Polar record, July 1952, v. 6, no. 42, p. 245-57)

*Contains* an itinerary and brief report on the work conducted in the summer of 1946 with the aid of the Arctic Institute of North America and the Canadian Dept. of Mines and Resources. It consisted of a survey of vegetation in central and northern Ungava Peninsula, Southampton Island and the Baker Lake area of Keewatin District. The work continued in summer 1947 in several areas (67°37' N. 127°8' W. and 68°55' N. 124°55' W., etc.) and extensive pollen collections made from aircraft at a general height of 5000 ft. Further pollen collections were made by improved methods during summer 1948 and on a flight to the North Pole, Mar. 1949; and botanical work during summer 1949 is noted.

*Copy seen:* DLC.

**25164. POLAR RECORD.** Project "Snow Cornice" 1949. (Polar record, Jan. 1951, v. 6, no. 41, p. 97-99)

*Contains* brief report on investigations continued in 1949 at the Seward Glacial Research Station, under the direction of Walter A. Wood and Robert P. Sharp. The work included scaling of Mt. Vancouver (15,850 feet); studies of the glaciology, ice structure and crystallography on Malaspina Glacier; precipitation on Seward Glacier with observations on density, accumulation and ablation, temperature, thickness of glacier; routine meteorological observations; examination of Sitka spruce and Western hemlock trees, etc.

*Copy seen:* DLC.

**25165. POLAR RECORD.** Reading expedition to Jan Mayen, 1950. (Polar record, July 1951, v. 6, no. 42, p. 264-265, illus.)

*Contains* a note on a six-man summer expedition organized at Reading University and led by J. Warren Wilson. Botanical and geological surveys of the northeastern and southwestern parts of the island were made and the geological history of its highest mountain, Beerenberg, studied. Glaciological and zoological observations were made, some 2000

plant specimens collected and factors affecting local plant growth studied.

*Copy seen:* DLC.

**25166. POLAR RECORD.** Recent polar literature. A selected and annotated bibliography (Polar record, Jan. 1950, v. 5, no. 39, p. 485-518; July 1950, v. 5, no. 40, p. 641-59; Jan. 1951, v. 6, no. 41, p. 129-166; July 1951, v. 6, no. 42, p. 283-329; Jan. 1952, v. 6, no. 43, p. 423-60; July 1952, v. 6, no. 44, p. 551-82)

*Contains* under headings Arctic, Antarctic, General, several hundred items listed with brief note of content. Offprints of these lists may be ordered from the Scott Polar Research Institute, Cambridge, Eng. *Copy seen:* CaMAI.

**25167. POLAR RECORD.** Robert J. Flaherty. (Polar record, Jan. 1952, v. 6, no. 43, p. 420-21)

*Contains* obituary of Flaherty, 1884-1951, with sketch of his life, his explorations in the Ungava region, Belcher Islands, etc., and his film-making on Baffin Island.

*Copy seen:* DLC.

**25168. POLAR RECORD.** Royal Canadian Air Force operation "Lyon", 1949. (Polar record, Jan. 1952, v. 6, no. 43, p. 369-70)

*Contains* a note on an operation whose object was to transport members of the Queens University Expedition to Southampton Island in Aug. 1949, to make a comparative physiological examination of the Eskimos of northwest Foxe Basin. The personnel of the expedition and of other parties aboard the plane, their programs and itinerary are given.

*Copy seen:* DLC.

**25169. POLAR RECORD.** Royal Navy experimental trials in arctic waters, 1949. (Polar record, July 1950, v. 5, no. 40, p. 614-15)

*Contains* a summary of reports which appeared in the British press. These trials known as Operation Rusty had as object to test men, experimental clothing, machinery equipment and armament at prolonged low temperature. They were carried out in Feb.-Mar. 1949, by a naval force consisting of the light aircraft-carrier *Vengeance*, two destroyers, a frigate, a submarine, an oiler. A large number of specialists and scientists prepared and supervised the experiments which were conducted in Greenland Sea. Another task force making engine and armament tests is briefly noted.

*Copy seen:* DLC.

**25170. POLAR RECORD.** Small boats for use in Spitsbergen. (Polar record, Jan. 1950, v. 5, no. 39, p. 467)

*Contains* a note (based on information from P. S. B. Digby) on boats smaller than 25 feet in length used locally and by the Norsk Polarinstitutt; their characteristics, capacity, way of handling, etc. are given.

*Copy seen:* DLC.

**25171. POLAR RECORD.** Transliteration of Russian names. (Polar record, July 1952, v. 6, no. 44, p. 546)

*Contains* a note and reproduction of the transliteration table of Russian, recommended jointly by the Permanent Committee on Geographical Names for British Official Use and the U. S. Board on Geographic Names, at a meeting in London in October 1947.

*Copy seen:* DLC.

**25172. POLAR RECORD.** Ungava Bay fisheries expedition, 1947, 1948 and 1949. (Polar record, Jan. 1951, v. 6, no. 41, p. 92-95)

*Contains* a brief report on work of Maxwell J. Dunbar and Henry Hildebrand (McGill University), sponsored by the Fisheries Research Board of Canada. Investigation was undertaken to establish the aquatic resources of the area with a view to improving the diet and living standard of local Eskimo population. In the summer of 1947, temperatures, salinity and oxygen content of the Bay were studied and fishing experiments conducted. The work was extended in 1948 and a special research vessel, the *Calanus* built; during the summer, studies on food habits of fish and seals, on plankton, hydrography, etc. were conducted. Earlier in this year, winter biology and fishing were studied in several lakes near the Bay. The 1949 program included marking of cod, locating of adult Greenland halibut; biology of seals; experimental fishing, etc. Hydrography and marine biological studies were conducted by the *Calanus*. Collections of mammals and birds were made during the expeditions.

*Copy seen:* DLC.

**25173. POLAR RECORD.** U. S. Air Force weather reconnaissance flights to the North Pole. (Polar record, July 1950, v. 6, no. 42, p. 268)

*Contains* summary note on regular flights begun in 1947 from Ladd Field, Alaska over "Ptarmigan" and "Ptarmigan B" route (by Barrow - or Aklavik - Prince Patrick Island) to the North Pole.

Aircraft equipment, personnel, observations and their immediate transmission are briefly noted. **Copy seen:** DLC.

**25174. POLAR RECORD.** U. S. Army Frost Effects Laboratory, Boston. (Polar record, July 1952. v. 6, no. 44, p. 545-46)

*Contains a summary from: Report on cold room and equipment for frost investigation, prepared by Frost Effects Laboratory, Corps of Engineers, U. S. Army . . . Washington 1950, and other sources. The Laboratory, established in 1944, investigates the effects of freezing and thawing of the soil on roads, runways, with the aim of developing better designs. Between 1944 and 1949 frost action on northern airfields was studied. For testing soil samples, a cold room was completed in 1950; load-bearing capacity of ice; rate of its formation and welling, etc., are also studied.*

**Copy seen:** CaMAI; DLC.

**25175. POLAR RECORD.** United States Navy experimental training cruise in Alaskan waters, Operation "Mico-vex", 1949. (Polar record, July 1950. v. 5, no. 40, p. 619-20)

*Contains a brief account of the operation in which 30 ships and 18,000 officers and men took part, and which was planned to test arms and equipment and give experience of subarctic conditions to the crews. The main phases of the operation are briefly outlined and some of its results and conclusions given.*

**Copy seen:** DLC.

**25176. POLAR RECORD.** Work of the United States Coast and Geodetic Survey in Alaska, 1946-48. (Polar record, July 1950. v. 5, no. 40, p. 589-90)

*Contains notes based on the Annual Report of the Governor of Alaska to the Secretary of the Interior for the years ended June 30, 1947 and June 30, 1948; on aerial photographic, map and chart work, hydrographic work, triangulation surveys, tide prediction, etc., carried out or initiated in three years. Published results are noted.*

**Copy seen:** DLC.

**POLAR RECORD,** see also Blüthgen, J. Erschliessung d. Polargebiete seit 1939. 1950. No. 20728.

**25177. POLARÅRBOKEN.** Vi presenter Norsk Polarinstitutt og mennene bak. (Norsk polar-tidende, no. 9-12, Polarår-boken 1951, p. 5-30, illus. map). Text in Norwegian and English. **Title tr.:**

The Norsk Polarinstitutt and the men behind it.

*Contains an account, based on interviews with H. U. Sverdrup the director, and with the staff, of the Institute's scientific activities and publications in Norwegian Arctic and Antarctic, its financial resources; international cooperation in research; prospects of a polar museum and new building, etc.; interview with A. K. Orvin, vice director and geologist, on practical work of the Institute: its maintenance and operation of lighthouses and radio beacons on Svalbard; and its fixing of place names; geological research and mapping; etc.; with the topographer W. Wolheim, and his assistants, on recent advances and instruments in geodesy, mapping, etc.; with Harald Major the geologist, on geological surveying, especially that of the Svalbard coal fields, the peculiarities and uses of the coal, stratigraphy, other deposits, etc.; with K. Z. Lundquist on the hydrographical work, navigation and lighthouses in the Norwegian Arctic; soundings, etc.; with the glaciologist and librarian-secretary on their departments and activities. Biographical notes of the persons interviewed, are included.*

**Copy seen:** CaMAI

**25178. POLARBOKEN.** Norsk Polarinstitutt. (Polarboken, 1949. p. 131-32). Text in Norwegian. **Title tr.:** The Norwegian Polar Institute.

The Norsk Polarinstitutt which was established on March 1, 1948 will carry on and expand the work done by Norway's Svalbard and Arctic Ocean Investigations (Norges Svalbard- og Ishavs-Undersøkelser). The latter was founded in 1928 in order to continue the activities of the state-supported Svalbard expeditions. The region involved included Svalbard, Franz Josef Land, Jan Mayen, and parts of East Greenland. The new institute will continue the scientific series published by the older organization (the *Skifter og Meddelelser*) and plans to carry on more scientific research than heretofore with the aid of specialists from the Universities of Oslo and Bergen and other learned institutions. The director is Prof. H. U. Sverdrup of the University of Oslo, formerly professor of Oceanography at the University of California, and his assistant is a geologist, Dr. A. K. Orvin. **Copy seen:** CaMAI.

**25179. POLARBOKEN.** Odd Arnesen, polarjournalisten, 29 mars 1897-23 januar

1946. (Polarboken, 1949, p. 5-6, illus.) **Title tr.:** Odd Arnesen, the polar journalist, March 29, 1897-January 23, 1946.

Odd Arnesen was Norway's leading newspaper authority on polar matters. In addition to his many contributions to the daily press, he was editor of the *Polar-årbok* (*Polar annual*) and wrote a number of books on the Arctic and Antarctic, the most important and successful of which were *Road Amundsen som han var* and *Hele Norges skule "Fram."*

**Copy seen:** CaMAI.

**25180. POLARBOKEN.** Smånytt fra polarfrontene. (Polarboken, 1949, p. 133-37) **Title tr.:** News items from the polar fronts.

Norwegian activities on Svalbard and East Greenland are briefly reviewed for the 1945-1948 period. Special mention is made of the Svalbard expeditions conducted in 1947 by the Svalbard Undersøkelser and in 1948 by the Norsk Polar-institutt, which carried out topographical, hydrographical and geological investigations. Three Danish expeditions to Greenland under Munck and Knuth, Lange Koch, and Ib Paulsen are reported on for 1947 and 1948.

plutona Gremiâkha-Vyrmes na Kol'skom poluostrove. (Vserossiiskoe mineralogi-cheskoe obshchestvo. Zapiski, 1940. ser. 2, chast 69, vyp. 2-3, p. 303-309, illus.) **Title tr.:** The aegirinites of the Gremyâkha-Vyrmes pluton on Kola Peninsula.

"Three types of aegirinites and three series of intermediate syenitic rocks are described. Chemical analyses are included."—Geological Society of America, *Bibliography and index of geology*, 1947, pub. 1948, v. 12, p. 185. Summary in English. **Copy seen:** MH.

**25187. POLKANOV, ALEKSANDR ALEKSEEVICH, 1888-** . K voprosu o genezise titana magnetitovogo orudeneniâ gabbrosienitov plutona Gremiâkha-Vyrmes (Kol'skii Poluostrov). (Akademiiâ nauk SSSR. Izvestiâ. Seriiâ geologicheskaiâ, 1944. no. 6, p. 34-51, illus.) **Title tr.:** On the genesis of titanic magnetite-bearing gabbro-syenites of the Gremyâkha-Vyrmes pluton, Kola Peninsula.

"The accumulation of titanic magnetite in the Gremyâkha-Vyrmes pluton is genetically related to ultrabasic and basic rocks of the series of hortonolite—peridotite—gabbro—anorthosite and hortonolite—peridotite—oligoclase gabbro—âkerite—pulaskite, associated in banded structures. The first series of rocks was formed during a gravitative crystallization differentiation of the gabbro magma (the first subphase of the intrusion), and the second during a differentiation of the kjelsite magma (the second subphase of the intrusion). This is confirmed by the formation of asymmetrical banded structures and the paragenesis of the rocks. The mineralization belongs to the type of 'rest magma enriched deposits' of J. Vogt or, rather, to the 'fusive' type of A. N. Zavaritsky."—Geological Society of America, *Bibliography and index of geology*, 1945-46, v. 11, p. 254. Summary in English.

**25195. POLUNIN, NICHOLAS VLADIMIR, 1909–**. *Perlustrationes plantarum arcticarum* II: "Parry plants" in the Manchester Museum. (*Rhodora*, Feb. 1952. v. 54, no. 638, p. 45–55) **Title tr.:** Surveys of arctic plants II:

"Parry plants" in the Manchester Museum.

*Contains* a description of three sets of plants, totalling about 130 specimens collected by Sir W. E. Parry on his third voyage in the Canadian Arctic and now at the Manchester Museum; order and nomenclature are according to the author's *Botany of the Canadian Eastern Arctic* (No. 13670–72 in *Arctic Bibliography*). The physical appearance of the sheets on which the plants were originally mounted is described and notes given including some localities of finds (Port Bowen, Whalefish Islands, etc.) and their dates (1824, 1825). **Copy seen:** DLC.

**25196. POLUNIN, NICHOLAS VLADIMIR, 1909–**. *Perlustrationes plantarum arcticarum* III: "Parry plants" in the possession of the Royal Geographical Society, London. (*Rhodora*, Aug. 1952. v. 54, no. 644, p. 213–16) **Title tr.:** Surveys of arctic plants III: "Parry plants" in the possession of the Royal Geographical Society, London.

*Contains* a description of a small collection (17 specimens) made (according to a note on a sheet) apparently in 1823 on Melville Peninsula during Parry's second voyage for discovery of the Northwest Passage (1821–23). The physical appearance of the sheets, later notes on them, etc., are discussed.

**Copy seen:** DA.

**25197. POLUNIN, NICHOLAS VLADIMIR, 1909–**. *Perlustrationes plantarum arcticarum* IV: "Parry plants" added to the University Herbaria, Oxford. (*Rhodora*, Nov. 1952. v. 54, no. 647, p. 271–85) **Title tr.:** Surveys of arctic plants IV: "Parry plants" added to the University Herbaria, Oxford.

*Contains* an account of three sets of arctic plants from the Oxford herbarium, collected by Sir W. E. Parry. Their relation to other known sets is indicated, with descriptions where necessary, the order and nomenclature are those of the author. Each of the sets is dealt with separately: the physical appearance of the mounts, notes found on them, history of the particular set, etc. The three sets contain 57 plant specimens.

(Leningradskoe obshchestvo estestvoispytatelei. Trudy, 1937. Otdelenie botaniki. t. 66, no. 2, p. 303-319, tables) **Title tr.:** Essays on the ecology of plants, 2. From work on plant ecology, geobotanical section of Leningrad University.

**Contents:** (following introductory note with title as above) Zvorykina, N. F., and M. I. Kirpichnikov. Èkologicheskoe znachenie zimnei transpiratsii drevesnykh porod raznogo proiskhozhdeniia (The ecological importance of winter transpiration in arboreous species of various origins), p. 304-312. Authors give data on experiments on winter transpiration of plants belonging to the same genus or species but of different geographical origin. On the whole, the earlier conclusions of Ivanov (1925) were confirmed, viz, that southern forms have a stronger

transpiration than have the northern forms.

**Snigireva, A. V.** K èkologii kustarnikov, sokhranaiushchikh na zimu listvu (The ecology of bushes that retain their foliage in winter), p. 313-19. Studies on winter transpiration of bushes with non-deciduous leaves demonstrated that a southern species growing together with a northern uses a larger amount of water. This is also the case with bushes having deciduous leaves.

**Copy seen:** DLC.

**25208. POPOV, A.** Ob ishehezaushchikh ostrovakh v severnom ledovitom okeane. (Znanie-sila, July 1952. no. 7, p. 14-15, map) **Title tr.:** On disappearing islands in the Arctic Ocean.

**Contains** discussion of the disappearance of some arctic islands and the reasons for it. Giving a description of permafrost and its formation, the author stresses that during the last glacial period, its extent and the extent of the Siberian plain was far beyond the present northern shoreline. Due to rise of the sea and the temperature, and also through the action of the rivers, this land mass was broken up into islands, which continued and still continue to decrease in size and to disappear. Those of Laptev and East Siberian Seas peripheral to the New Siberian archipelago exemplify this process. Author mentions the disappearance of Sv. Diomedea discovered by D. Laptev in 1739 and seen 22 years later by Shalaurov, the successive diminution and final disappearance of Ostrov Vasil'yevskiy, near Stolbovoy Ostrov (74°10' N. 133° E.), etc.

Sbornik statei, 1940. t. 3, p. 247-49) **Title tr.:** From the report on a mission to Nganasans, sent by Institute of Ethnography, Academy of Sciences U.S.S.R.

**Contains** an account of the author's two-year (1936-37) expedition to the Taymyr region with the purpose of studying the life of the Samoyedic group the Tawgis, their origin and social organization. He visited the regions of the Khatanga and Bol'shaya Balakhnya Rivers and Lake Taymyr; noted material on hunting, fishing and folklore; made 800 photographs, collected 500 objects and 4000 words, etc. Part of the results

are published as the author's *Nganasany* vyp. 1, 1948, q. v. See also *Arctic Bibliography*, No. 13731, for a preliminary paper.

**Copy seen:** DLC.

**25214. POPOV, ANDREĬ ALEKSANDROVICH.** Kochevaiia zhizn' i tipy zhilisheh u dolgan. (Akademiia nauk SSSR. Institut etnografii. Trudy, 1952. Novaiia seriia. t. 18, Sibirskii etnograficheskii sbornik, p. 142-72, 27 illus., incl. 2 fold. plates, 2 tables) **Title tr.:** Nomadic life and types of dwellings among the Dolgans.

**Contains** description of the old summer and winter dwellings, the portable modern frame cabins, built on reindeer sledges, the interior of a tent (*chum*), types of sledges, saddles and harness, etc. The huts and tents, their construction, sites, etc., also the sledges and reindeer hitches are shown in numerous figures and photographs through the text. This is based on material collected by the author for the Academy of Sciences during his two-year ethnographic expedition in north-eastern Taymyr in 1930-31. The occupation of these people (who are Yakutized Tungus) is reindeer breeding, hunting and fishing. Collectivization was completed among them in 1938, and now the Dolgans, living in the waste region of the Dudinka, Avam and Khatanga Rivers (about one-half million sq. km.) are organized into a little more than ten kolkhoses.

**Copy seen:** DLC.

**25215. POPOV, ANDREĬ ALEKSANDROVICH.** Materialy po istorii religii iakutov b. Vil'us'skogo okruga. (Akademiia nauk SSSR. Muzei antropologii i etnografii, 1949. Sbornik, t. 11, p. 255-323, 26 illus.) **Title tr.:** Materials to the history of religion of the Yakuts in the former District of Vilyuysk.

**Contains** first-hand material, collected by the author in the northwestern part of the District of Vilyuysk (in the villages of Ugul'atsk, Pervyi Batulinsk, Onogoshchutsk, and Mangassk) in 1922-25 on (1) cosmogony, groups of good and evil gods, their names and functions, beliefs and customs connected with hunting and fishing, all kinds of prohibitions; (2) divinations, religious feasts, customs at birth and burial, beliefs about the soul and its fate after man's death. Includes an epic song about the tragic fate of the beautiful daughter of a prince from Olekminsk (in Yakut and Russian), and other texts. The introduction by

V. G. Bogoraz gives general remarks on the author and the collection.

**Copy seen:** DLC.

**25216. POPOV, ANDREĬ ALEKSANDROVICH.** Ngeanasany, vyp. 1. Material'naia kul'tura. Moskva-Leningrad, 1948. 122 p., 69 illus., fold. map, 36 plates (18 col.). (Akademiia nauk SSSR. Institut étnografii im. N. N. Miklukho-Maklaia. Novaiia seriia, t. 3) **Title tr.:** The Ngeanasans, part 1. Material culture.

*Contains* results of field work in the Taymyr district (from Dudinka north and east beyond Lake Taymyr) 1936-38, to study the Tawgis (new name: Ngeanasans) a Samoyed group. Main geographical, historical, and statistical data are given. The annual economic cycle, hunting and fishing, reindeer breeding, and means of communication are discussed. Tools and processes of production, the dwellings, domestic utensils, and camps of the Ngeanasans are described. Then follow chapters on food and clothing. There are many indications that the Ngeanasans formerly lived in southern areas of Siberia. The rich illustrative matter includes sketches and photographs showing these people, their accoutrements and activities in great detail: sledge structures, clothing and tent designs, plans of the camps, the wild reindeer hunt, etc.

A previous publication Tavgiŭtsy, 1936 (*Arctic Bibliography*, No. 13734) the result of the author's field work 1930-32 was a preliminary outline of the elements of the Tawgis' culture (including material aspects). **Copy seen:** DLC; InU.

**25217. POPOV, ANDREĬ ALEKSANDROVICH.** Okhota i rybolovstvo u dolgan. (In: Akademiia nauk SSSR. Institut étnografii. Pamiaty V. G. Bogoraza, 1865-1936, pub. 1937. p. 147-206, illus., 5 plates, 2 sketch maps) **Title tr.:** Hunting and fishing among Dolgans.

Results of the author's field observations in 1930-1931 are reported here. The popular calendar of Dolgans is explained. Ways and means of hunting and the animals are described: northern wild reindeer, arctic fox, etc., and birds, important as food in summer. Kinds of fishes and methods of fishing are described. Principles of organization of hunting and fishing activities and of distribution of bag and catch are discussed, and finally,

the ideological connections of the hunt, protecting spirits, magical rites, taboo.

**25228. POPPIUS, BERTIL ROBERT, 1876-1916.** Beiträge zur Kenntniss der Coleopteren-Fauna des Lena-Thales in Ost-Sibirien. I. Haliplidae und Dytiscidae. Helsingfors, 1905. 24 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1904-1905. v. 47, no. 16) **Title tr.:** Contributions to the knowledge of the coleopterous fauna of the Lena Valley in East Siberia, I. Haliplidae and Dytiscidae.

*Contains* an account of two groups of water-beetles, *Haliplidae* and *Dytiscidae*. The first, general section deals with earlier studies, distribution and ecology, and zoogeographical components of the water-beetle fauna in this area as investigated during A. K. Cajander and B. R. Poppius' natural history trip in Lena valley in 1901 (see *Arctic Bibliography* No. 2636). The second section gives descriptions of 56 species (quite detailed for new ones), with dates and localities of finds. A considerable number were found along the lower Lena. Similar material from this area collected by Toll's Russian Polar Expedition 1901-03, was determined by Poppius (see *Arctic Bibliography* No. 13770).

**Copy seen:** DLC.

**25229. POPPIUS, BERTIL ROBERT, 1876-1916.** Beiträge zur Kenntniss der Coleopteren-Fauna des Lena-Thales in Ost-Sibirien. II. Cicindelidae und Carabidae. Helsingfors, 1906. 65 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1905-1906. v. 48, no. 3) **Title tr.:** Contributions to the knowledge of the coleopterous fauna of the Lena valley in eastern Siberia, II. Cicindelidae and Carabidae.

*Contains* a general part, giving a zoogeographical analysis of these two groups of beetles along the Lena valley, including the lower Lena; and a special part with a list of four forms of Cicindelidae and 186 forms of Carabidae. Localities and dates of finds are given and in cases of new forms detailed descriptions are offered.

**Copy seen:** DLC.

**25230. POPPIUS, BERTIL ROBERT, 1876-1916.** Beiträge zur Kenntniss der

Coleopteren-Fauna des Lena-Thales in Ost-Sibirien, III. Gyrinidae, Hydrophilidae, Georyssidae, Parnidae, Heteroceridae, Lathridiidae und Scarabaeidae. Helsingfors, 1907. 17 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1906-1907. v. 49, no. 2) **Title tr.:** Contributions to the knowledge of the coleopterous fauna of the Lena valley in eastern Siberia, III. Gyrinidae, Hydrophilidae, Georyssidae, Parnidae, Heteroceridae, Lathridiidae and Scarabaeidae.

*Contains* a list of 71 forms of these beetles, with localities and dates of finds given. New species are described in considerable detail. Forms found in the lower Lena valley are included.

**Copy seen:** DLC.

**25231. POPPIUS, BERTIL ROBERT, 1876-1916.** Beiträge zur Kenntniss der Coleopteren-Fauna des Lena-Thales in Ost-Sibirien, IV. Staphylinidae. Helsingfors, 1909. 53 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1908-1909. Afd. 51A, Matematik och naturvetenskaper, no. 4) **Title tr.:** Contributions to the knowledge of the coleopterous fauna of the Lena valley in eastern Siberia, IV. Staphylinidae.

*Contains* a brief introductory note on the zoogeography of this group of beetles followed by a list of 220 forms collected by the author in 1901. Locations, dates, and habitats of the finds are given. New species are described in detail. Forms from arctic areas are included.

**Copy seen:** DLC.

**25232. POPPIUS, BERTIL ROBERT, 1876-1916.** Beiträge zur Kenntniss der Coleopteren-Fauna des nordöstlichen Europäischen Russlands, I. Carnivora, Brachelytra, Silphidae und Corylophidae. (Akademifä nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1905, pub. 1907. t. 10, no. 3-4, p. 302-315) **Title tr.:** Contributions to the knowledge of Coleoptera fauna of northeastern European Russia, I. Carnivora, [etc.]

*Contains* a list of over 150 species of beetles of four Coleoptera families, collected mostly by Zhuravskii in the northern Pechora River basin and around Arkhangel'sk and Mezen'; including diagnoses and synonymy of *Carabus* (*Dio-carabus*) *polaris*, *Atheta* (*Metazyga*) *shuravskyi* and *Bledius gracilicornis* n. spp.

**Copy seen:** DLC; MH-Z.

**25233. POPPIUS, BERTIL ROBERT, 1876-1916.** Drei neue Arten der Gat-

tung *Tachinus* Grav. aus Ost-Sibirien. Helsingfors, 1904. 6 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1903-1904. v. 46, no. 13) **Title tr.:** Three new species of the genus *Tachinus* Grav., from eastern Siberia.

**Contains** descriptions of three new species of these beetles: *Tachinus tundrae*, n. sp. from the lower Lena; *Tachinus jacuticus*, n. sp. from the vicinity of Yakutsk, and, *Tachinus ochoticus*, n. sp., from Port Ayan, Okhotsk Sea coast.

**25234. POPPIUS, BERTIL ROBERT, 1876-1916.** Kola-halföns och Enare Lappmarks Coleoptera. Helsingfors, 1905, pub. 1907. 200 p. (*In:* Festschrift Dr. J. A. Palmén. Bd. 2, no. 12) **Title tr.:** Coleoptera of the Kola Peninsula and Inari Lappmark.

**Contains** (in the general part, p. 1-84) historical notes on the study of the beetles of Kola Peninsula and Inari Lappmark in northern Finland, a survey of this fauna arranged by the families with lists of typical forms and data on their distribution. In the special parts (p. 84-200) is a systematic list of 1036 species and numerous varieties with data on habitat, collectors, time of collection and list of localities. Although the imprint date is 1905, this paper was actually published in 1907. **Copy seen:** MH-Z.

**25235. POPPIUS, BERTIL ROBERT, 1876-1916.** Eine neue *Hydropus*-Art von Novaja-Zemlja, (Russkoe éntomologicheskoe obozrenie, 1912. t. 12, no. 1, p. 107) **Title tr.:** A new species of *Hydropus* from Novaya Zemlya.

**Contains** a diagnosis of a new beetle, *Hydropus sumakovi* n. sp., found in 1911 by G. Sumakov on Novaya Zemlya.

**Copy seen:** DSI-M; MH-Z.

**25236. POPPIUS, BERTIL ROBERT, 1876-1916.** Neue palaearctische Coleopteren. Helsingfors, 1904. 14 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1903-1904. v. 46, no. 16) **Title tr.:** New palaearctic Coleoptera.

**Contains** a detailed description of nine new species of beetles, including three from the lower Lena and Kanin Peninsula and three from somewhat lower latitude of Yakutsk and Aldan River. The new forms are compared with closely related known species.

**Copy seen:** DLC.

**25237. POPPIUS, BERTIL ROBERT, 1876-1916.** Om förekomsten af *Anopheles claviger* Fabr. i svenska Lappmarken. (Entomologisk tidskrift, 1912. Årg. 33, häft. 1-2, p. 127-28) **Title tr.:** On occurrence of *Anopheles claviger* Fabr. in Swedish Lapland.

**Contains** a review of data available in the literature on distribution of a northern mosquito, *Anopheles claviger*, in Swedish Lapland, with additional notes on its occurrence in Finland and Siberia (Lena River region).

**Copy seen:** DLC; MH-Z.

**25238. POPPIUS, BERTIL ROBERT, 1876-1916.** Über einige Chaudoir'sche Arten der Pterostichen-Untergattung; *Cryobius* Chaud. Helsingfors, 1908. 4 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1907-1908. Bd. 50, no. 5) **Title tr.:** On some of Chaudoir's species of the Pterostich sub-genus *Cryobius* Chaud.

**Contains** a description of five species (one new) of these beetles (from the former Chaudoir collection then in possession of R. Oberthur of Rennes). The new species, *Cryobius sedakovi*, n. sp. is from eastern Siberia, the others from Kodiak and Sitka (Baranof) Islands.

**Copy seen:** DLC.

**25239. POPPIUS, BERTIL ROBERT, 1876-1916.** Über einige sibirische und nordwest-amerikanische Käfer-Arten. Helsingfors, 1908. 7 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1907-1908, Bd. 50, no. 6) **Title tr.:** On some Siberian and Northwest American species of beetles.

**Contains** a description of 16 forms of beetles collected by the Swedish Expeditions to the Yenisey 1875-76 and (11 species) by the Vega Expedition. Includes one new species, *Pterostichus (Cryobius) beringensis*, n. sp. from the Lavrentiya Guba region of Chukotsk Peninsula. The other forms live almost exclusively in Arctic Eurasia: Novaya Zemlya, lower Yenisey and Lena Rivers, Chukotsk Peninsula. Bibliographical footnotes.

**25249. PORSLID, ALF ERLING, 1901-** . Botany of southeastern Yukon adjacent to the Canol Road. Ottawa, 1951. v. 400 p. 39 plates, maps, tables. (Canada. National Museum [Ottawa] Bulletin no. 121. Biological series, no. 41)

Contains a study primarily of vascular plants collected during June-Sept. 1944 as part of the North Pacific Planning Project in the region of the 282-mile stretch of the Road from Teslin Lake to MacMillan Pass (60°13' W. 63°130' W.) "among the least known parts of Canada." The catalog is preceded by accounts of the history, the exploration of the area, also its topography, physiography (climate, snow, permafrost, soil, peat deposits, etc.). Its plant communities are treated with detailed accounts of each sector. Phytogeographic divisions of the Yukon are discussed, the origin and age of the flora. Then follows (p. 61-342) a catalog of all known plants of the Yukon, arranged in taxonomic order with notes on areas of occurrence, frequency, earlier observations, morphological peculiarities, etc. Bibliography (55 items) and photographic illustrations of Yukon vegetation and plant species complete the study.

Contains report on feeding experiments made at the Moscow Fur Institute on animals 7-8 months old, to ascertain what effect a fast-day has on them. Omitting food during one day per week does not increase the food utilization of the animals; such omission is admissible provided the daily ration is increased by one-seventh. Composition of food, data on digestion, rations on cold days, etc., are given. **Copy seen:** DLC.

**25275. POZDNIĀKOV, L. K.** Drevo-vidnāĀ forma kedrovogo stlanĀsa. (BotanicheskiĀ zhurnal, 1952. t. 37, no. 5, p. 688-91, illus.) **Title tr.:** A tree-like form of the dwarf pine.

Contains a study of a rare tree-like form of the shrubby dwarf pine (*Pinus pumila* Rgl.) found in the Aldan River basin in Yakutia, with a description, observations on the rate of growth and a comparison with typical shrubby form of *Pinus pumila*. **Copy seen:** MH-A.

**25276. POZDNIĖEV, A. M.** Lamuty. (*In: Entsiklopedicheskiĭ slovar'*, 1890-1904. v. 17, p. 308-309) *Title tr.:* The Lamuts.

Brief article on this nomadic tribe of Tungus origin (about 3000) living on the tundras of Yakutia, between the Indigirka and Kolyma Rivers, and along the Okhotsk seacoast; their various dialects, racial type and relationship to other tribes; their tents, domestic life and utensils; fishing, hunting and reindeer breeding; seasonal migrations; christianization; attitude toward children; longevity; Russian administration and exploitation. *Copy seen:* DLC.

**25277. PRASOLOV, L. I.** The climate and soils of northern Eurasia as conditions of colonization. (*In: American Geographical Society of New York. Pioneer settlement*, 1932. p. 240-60, maps, tables)

Contain a study of climate, and (mainly) soils, as affecting colonization north of 60° N. lat. in Europe, and north of 50° N. lat. in Siberia. Includes data on the climatic provinces of northern Eurasia and climate unfavorable for agriculture followed by discussion of soils: podzols and their character; agricultural capacity of soils; bogs and podzols of western Siberia and northeast Russia; soils of the Urals, western and eastern Siberia. Bibliography (about 40 items). *Copy seen:* DLC.

**PRATT, J. G.**, see Knox, J. A., & J. G. Pratt. All about Klondike. 1897. No. 23330.

**25278. PRATT, WALLACE EVERETT.** 1885- . Petroleum in the polar areas. (*In: Pratt, W. E., and D. Good. World geography of petroleum*, 1950. *Pub.* as American Geographical Society. Special publication. no. 31, p. 308-318, plate, map)

Brief notes on potential oil resources of the Eurasian Arctic and on the present state of petroleum production and exploration in Alaska (U. S. Naval Petroleum Reserve no. 4) and the Northwest Territories (Norman Wells). *Copy seen:* DGS.

**25279. PRAVDIN, I. F.** Oчерк zapadno-kamchatskogo rybolovstva v svyazi s obshchimi voprosami dal'nevostochnoi rybopromyshlennosti. (Vladivostok. Tikhookeanskiĭ nauchno-issledovatel'skiĭ

institut rybnogo khozĭastva i okeanografii. Izvestiĭa, 1928. t. 1, vyp. 1, p. 169-266, 2 plates) *Title tr.:* A sketch of the West Kamchatka fishing industry in connection with the general problem of that industry in the Far East.

Contains a study of the fishing industry on the western coast of Kamchatka (Okhotsk Sea) based on the author's investigations during his trip to Kamchatka in June-Sept. 1926, with observations on the biology and ecology of various fishes, chiefly *Oncorhynchus gorbusha* (p. 172-201), tables of measurements of *O. gorbusha*, *O. nerka*, *O. keta* and some other species (p. 202-217, data on fishing industry of the region with many statistical tables and notes on the use of Russian and Japanese labor, p. 218-56). Author concludes (p. 257-59) that West Kamchatka is the best fishing area on the Okhotsk seashores; the pink salmon (*Oncorhynchus gorbusha*) is of most importance to the fishing industry, and the Kamchatka crab is of great promise; an attempt at cod fishing near the Kykchik River estuary was quite successful; preventive measures should be taken against dislocation of the river estuaries; river fishing and use of fish for dog food should be reduced; fish and crab canning should be increased; the use of various chemicals should be prohibited in preparation of caviar, the best method being salting; Russian fishermen should be increased and their training improved; Japanese are dominating the industry because of their cheaper and more efficient labor; fishermen's living conditions should be improved to increase migration to Kamchatka; subsidiary industries such as cattle breeding and vegetable gardening must be encouraged. Summary in English, p. 260-66. *Copy seen:* MH-Z.

**25280. PRAVDIN, I. F.** Ozernyi losos' iz basselna r. Kemi, *Salmo salar* morpha *relictus* (Malmgren). (*In: Sbornik N: M. Knipovich*, 1939, p. 209-214, illus.) *Title tr.:* *Salmo salar* morpha *relictus* (Malmgren) from lakes of the Kem' River basin.

Contains a description and a comparative study of this lake salmon discovered in the Kujto Lakes (Karelia) in the upper course of the Kem' River which flows into the White Sea (64°58' N. 34°50' E.). This salmon does not migrate to the sea, and differs also by its smaller size. Summary in English. *Copy seen:* MH-Z.

**25281. PRAVOSLAVLEV, P. A.** Gorgonopsid iz Severo-Dvinskikh raskopok 1923 goda. (*Amalitzkia annae* sp. nov.) Leningrad, Izd-vo Akademii nauk, 1927. 20 p., illus., plates 1-3. (*In: Amalitskii, V. P., and P. A. Pravoslavlev, Sev.-Dvinskije raskopki. no. 4*) **Title tr.:** A gorgonopsid from the Northern Dvina excavations of 1923.

*Contains* the description of *Amalitzkia annae*, a new fossil reptile from Upper Permian deposits at Zavrazhskoe Pusty, Northern Dvina basin, Arkhangel'sk province, excavated in 1923, with dimensions and a systematic discussion.

**Copy seen:** MH-Z.

**25282. PRAVOSLAVLEV, P. A.** Gorgonopsidae iz Severo-Dvinskikh raskopok V. P. Amalitskogo. Leningrad, Izd-vo Akademii nauk SSSR, 1927. 117 p., illus., plates 1-13. (*In: Amalitskii, V. P., and P. A. Pravoslavlev, Sev. Dvinskije raskopki. no. 3*) **Title tr.:** Gorgonopsidae from the Northern Dvina excavations of Prof. V. P. Amalitskii.

*Contains* a discussion of systematic characteristics of *Gorgonopsidae*, historical notes on the study of this group, and a description of fossil remains of five species of *Inostrancevia*, including four new ones, and *Amalitzkia vladimiri* sp. et. sp. nov.; a discussion of systematic position, general appearance, mode of life and geological distribution of these fossil reptiles, excavated from Upper Permian deposits in the Northern Dvina excavations.

**25293. \*PROKOF'EVA, E. D.** Ornament sel'kupov. (Akademiĭa nauk SSSR. Institut ětnografii. Kratkie soobshcheniĭa, 1950. t. 10, p. 29-39, 8 illus.) **Title tr.:** The ornament of the Sel'kups.

Contains description of the so-called "ribbon-woven" ornaments of this Ostyak-Samoyed group in the Turukhansk region between the upper Taz and Yenisey Rivers; based on material collected by the author in 1925-28 and 1932-33.

**Copy seen:** DSI-M.

**25294. PROKOF'EV, G. N.** Ėtnogoniĭa narodnostei Ob'-Enisejskogo basseĭna (nentsev, nganasanov, ěntsev, sel'kupov, ketov, khantov i mansov). (Sovetskĭa ětnografiĭa. Sbornik stateĭ, 1940. t. 3, p. 67-76) **Title tr.:** The ethnic origin of peoples of the Ob'-Yenisey basin (Samoyeds, Tawgis, Yenisey-Samoyeds, Ostyak-Samoyeds, Yeniseians, Ostyaks and Voguls).

Contains discussion of the origin of these peoples; they are a cross between the tribes which came from the South (i. e. Ugrie tribes, Sayan Samoyeds) and the aborigines of the far North in prehistoric times. The author claims to have established the existence of two such very old groups: the eastern group Tian and the western group Koum; the first group contributed to the formation of Samoyeds and Asiatic Eskimos; the linguistic and tribal affiliation of Koum remains an open question. The author based his conclusions on the studies of linguistics, ethnography, archeology, anthropology and folklore. Summary in French.

**Copy seen:** DLC.

**25295. PROKOF'EV, G. N.** K voprosu o perekhodnom zaloge v samoedskikh

\*No. 25293, 25296-25299, same author.

ĭazykakh, 1934 g. (*In: Akademiĭa nauk SSSR. Institut ĕtnografii. Pamĭati V. G. Bogoraza, 1865-1936, pub. 1937, p. 309-323*) **Title tr.:** On the problem of the transitive voice in Samoyed languages, 1934.

The problem is: in which cases does a transitive verb take the suffixes of the so-called objective conjugation (identical with the possessive suffixes attached to the nominative in the possessive declension), and when does it take the personal suffixes of an intransitive verb (identical with the predicative suffixes of nouns). After careful analysis of texts the author gives three useful rules. In his opinion the polysynthetic and agglutinative verb structure are in a complicated struggle with one another in Samoyed languages.

**Copy seen:** DLC.

**25296. \*PROKOF'EVA, E. D.** Ėneĕskit shamanskii kostĭum. (Akademiĭa nauk SSSR. Muzel antropologii i ĕtnografii. Sbornik, 1951. t. 13, p. 125-53, 32 illus.) **Title tr.:** The Samoyedic shaman costume.

*Contains* description of the ceremonial apparel of the shamaness Savone, belonging to the Bal group of Ėnĕsy or Samoyeds who wander between Potapovskoye and Igarka on the Yenisey. The apparel which was secured in 1938 and placed in Muzel antropologii i ĕtnografii in Leningrad, consists of the following parts: coat, mittens, breastplate, bandage for eyes, head-gear (crown), boots, drum and drumstick. Three degrees of shamans are found among these Samoyeds: (1) one who can communicate with the heavenly spirits, has a special costume, drum and staff; (2) one who protects the people from the evil spirits, he has drum only; and (3) mediator with the world of the dead, who acts at the burial ceremonies, but has no costume, drum, or staff. The shamaness Savone belonged to the first or highest degree. The Ėnĕsy people (numbering about 400 persons in 1926) live on the right bank of the Yenisey River, around Dudinka and Golchikha, and on the shores of Yeniseyskiy Gulf.

**25304. PUBLIC WORKS.** Designing sewers for the sub-Arctic. (Public works, Sept. 1950. v. 81, no. 9, p. 1-44 incl. illus.)

"Sewer systems in permafrost regions require special design principles. Sewers must not be laid in or near the center of the street, because consolidation of the roadbed under traffic during spring thaw adversely affects sewer alignment. Sewers must not be laid directly on permafrost without adequate insulation, or in frost-susceptible soil. The pipes should be at least 8 in. wide to avoid closure by frost accumulations. All pipes should consist of wooden staves to resist permanent deformation or breakage. The effects of house vents and ground temperatures on the freezing of sewers are problems still in the experimental stage."—SIPRE.

**Other authors:** R. Rükli and A. Dürker.

"A critical review is presented of studies in the U.S.S.R. and other countries concerning frost action on roadbeds. The Rükli laboratory investigations on frost control measurements include studies of various types of ice, the mechanics of rise in water level, temperature relationships in soils and the theoretical aspects of swelling. The field investigations consisted of actual measurements and the analysis of the data. Dürker's laboratory studies concern the properties of loose soils at freezing temperatures. The result of both studies show that excessive heaving is accompanied by segregation of ice in layers or lenses. The factors affecting ice segregation are texture and composition of the soil water supply, rate of heat loss, and surface load. Proper drainage and the substitution of a thick layer of coarse material in the subgrade are suggested to reduce excessive heaving." Bibliography (12 items).—SIPRE.

**25321. QVIGSTAD, JUST KNUD, 1853-**, and K. B. WIKLUND. Bibliographie der lappischen Literatur. Helsingfors, Suomalais-ugrilainen seura, 1899. 162 p. (Suomalais-ugrilainen seura. Toimituksia, 13) *Title tr.*: Bibliography of Lapp literature.

Contains a survey of publications in Lappish, of which a great many have been produced, although their literary value is not high. They are mostly translations of religious works, government decrees, elementary textbooks, and almanacs. The present authors have arranged their bibliography according to the countries where the Lapp books were published: Sweden (196), Norway (180), Finland (17), and Russia (3), a total 396 publications from A. D. 1619 to Oct. 1899. Short biographies of the authors and translators of the Lapp books are added (p. 136-46), also a bibliography of grammars, dictionaries and linguistic treatises on Lappish in several languages (p. 147-59).

*Copy seen:* DLC; InU.

**25322. QVIGSTAD, JUST KNUD, 1853-** . Dobbeltkonsonant i forlyd i lappisk. (Studia Septentrionalia, 1945. v. 2, p. 193-212) *Title tr.*: The double consonant in initial sounds in Lapp.

Whilst in Samoyed and in the Finno-Ugrian primitive languages no words begin with a double consonant, the southern Lapp dialects have many genuine words starting thus. It may be concluded that double consonants in initial sounds and a special vocabulary of the southern Lapps are both due to the influence of the Proto-Lapp language which they used before they adopted a Finno-Ugrian language.

*Copy seen:* DLC; InU.

**25323. QVIGSTAD, JUST KNUD, 1853-**, and G. SANDBERG. Lappische Sprachproben. Aufgezeichnet von J. Qvigstad und G. Sandberg. Ins Deutsche übersetzt und mit Anmerkungen versehen von J. Qvigstad. (Suomalais-ugrilainen seura. Aikakauskirja, 1888. 3, p. 1-110+[3] p. (illus. & corrigenda)) *Title tr.*: Lappish texts, recorded by J. Qvigstad and G. Sandberg; translated into German with notes by J. Qvigstad.

Collection of Lapp traditions and tales, those from Inari and Skolte Lapp, and Sydvaranger recorded by G. Sandberg, the remainder by J. Qvigstad. Among others are traditions with historical background about the Chudes, and various stories concerning Stallo. Supplement contains remarks by the Lapp teacher, Lars Olsen and drawings of the magic drum of the Lapps.

Lenin-grad, Redaktsionno-izdatel'skii otdel Morskogo vedomstva, 1924. xv, 182 p., plates, 35 maps (part fold.), table. **Title tr.:** The polar regions, 1914-1924. With a sailing-chart of the expeditions in the north polar ocean during the period 1914-1924 by A. M. Lavrov.

This informative work deals with expeditions, research and scientific results of the latter, for the period 1914-24. The section on the Arctic (p. 1-123) contains chapters on the arctic seas; northern Alaska and the Parry Islands; Greenland; Iceland; Spitsbergen; Kola Peninsula and Polar Ural; Novaya Zemlya and Franz Josef Land; Kara Sea and the Northern Sea Route. In each chapter the principal expeditions in the region during this decade are described, noting personnel, locality (with numerous sketch maps), work done and (in footnotes) resultant publications. *Fold. map* at end of volume shows tracks of expeditions in Russian arctic waters in this period.

**25331. RAE, R. W.** Arctic experiences, or Life begins at forty below. [Toronto] 1950. p. l., 12 numb. l. (Royal Meteorological Society, Canadian Branch, Papers. v. 1, no. 2) mimeographed.

A lively account of living conditions at Resolute on Cornwallis Island, where the

author worked at the meteorological station established in 1947; remarks on the water-supply system, heating equipment, clothing, amusements, etc., of the personnel; full notes on weather conditions; description of the island's landscape and seasonal fauna; and remarks on extreme cold weather problems with motors, instruments and the making of observations. Also abstracted in: *Meteorological abstracts and bibliography*, Nov. 1951. v. 2, no. 11, p. 882. **Copy seen:** CaMAI.

**25332. RAE, R. W.** Arctic weather stations. (Weather, London, Jan. 1952. v. 7, no. 1, p. 3-6)

Popular account of life and weather at the U. S.-Canadian stations in arctic Canada. **Copy seen:** DLC; DWB.

**25333. RAE, R. W.** Climate of the Canadian Arctic Archipelago. Toronto, 1951. 90 p. 15 fig. (Canada. Dept. of Transport. Meteorological Division)

Contains historical survey of early explorers' weather records, followed by "description of climatic controls (latitude, air pressure, distribution of land, water, ice and topography) and of the distribution of climatic elements. Data (averages for each month and the whole observation period) are added for 20 stations with observation periods from two to over 20 years (average about 10 years) for temperature, precipitation, cloudiness, visibility and wind. Charts are given for mean pressure and temperature distribution."—*Meteorological abstracts and bibliography*, May 1953. v. 4, no. 5, p. 599.

"... Most of the water surfaces are frozen over in winter except Hudson Strait. The maximum thickness of new ice formed in one winter is usually less than six ft. The amount of winter precipitation, the tendency of the snow to drift, the reduction of visibility with blowing snow, and the phenomenon of arctic white-out [man's loss of sense of perspective under certain cloud and snow conditions] are discussed. The reduction of visibility by blowing snow is directly related to surface wind velocity. Good visibility exists with wind velocities under 15 m.p.h. but reaches zero with wind velocities above 40 m.p.h. . . ."—*SIPRE*. Reviewed by F. K. Hare in *Arctic* Oct. 1952. v. 5, no. 3, p. 189-90.

**Copy seen:** CaMAI.

**25334. RAE, R. W.** Joint arctic weather project. (Arctic, May 1951. v. 4, p. 18-26, illus., sketch map, tables)

Historical background of weather observation in Canada, and brief account of U. S. and Canadian cooperation in establishing the present network of five arctic weather stations in the Canadian Arctic Islands. Description of methods of preliminary reconnaissance, choice of sites, air transport of supplies, special problems (fire protection, winter water supply, and morale); scientific program and climatic conditions at these far northern stations, and (in general) the system of communication used for transmitting data. The stations of the network discussed are: Eureka on Ellesmere Island (80°13' N. 86°11' W.), Resolute on Cornwallis Island (74°41' N. 94°55' W.), Isachsen on Ellef Ringnes Island (78°47' N. 103°32' W.), Mould Bay on Prince Patrick Island (76°14' N. 119°50' W.) and Alert on Ellesmere Island (82°29' N. 62°15' W.). Also abstracted in: *Meteorological abstracts and bibliography*, Nov. 1951. v. 2, no. 11, p. 879.

Contains account of Samoyed and Tungus womenfolk who have their own deities which take care of health of mother and her baby, help at birth and during the menses. Women's idols are tabu for men.

**Copy seen:** DSI-M; InU.

**25337. RÄSÄNEN, MARTTI.** Beiträge zu den altaisch-slavisch Berührungen. (Suomalais-ugrilainen seura. Toimituksia, 1950. v. 98, p. 125-31) **Title tr.:**

Contributions to the Altaic-Slavic contacts.

In section 2, the word for "squirrel" (also with the meaning "money" from the time pelts came into use as currency of exchange) is shown to have been borrowed from the Ob-Ugric languages into various Turkish languages, then into Tungus and Mongol, and from Mongol further into Russian. Section 3 shows the Russian *tundra* to derive from a western Tungus word which means "earth". Russian *taigá* also is of Altaic origin, having been borrowed from the Turcic dialects of Siberia which in their turn have taken it from Mongol.

**25343. RAMBERG, HANS.** Remarks on the average chemical composition of granulite facies and amphibolite-to-epidote amphibolite facies gneisses in West Greenland. (Dansk geologisk forening. Meddelelser, 1951. Bd. 12, p. 27-34, sketch map)

Contains the results of chemical analyses and discussion of "significant differences between the bulk chemical composition of granulite-facies gneisses and lower-facies gneisses" in Egedesminde and Ikertog regions of West Greenland. Bibliography (6 items).

**Copy seen:** DGS.

**RAMMEL-MEYER, E. S.**, see Likharev, I. M., & E. S. Rammel'meyer. Nazemnye molluski SSSR. 1952. No. 23849.

**25344. RAMSAY, WILHELM, 1865-1928.** Ein Besuch bei den Samojeden auf der Halbinsel Kanin. (Suomalais-ugrilainen seura. Aikakauskirja, 1906. v. 23, no. 27, p. 1-12, 2 plates) **Title tr.:** A visit to the Samoyeds on Kanin Peninsula.

Contains account of his impressions from the geological expedition in summer, 1903 (see *Arctic Bibliography*, No. 14142 for his main report). Following a sketch of the climate and vegetation, the inhabitants are described: some Russian, mostly Samoyed (1062 in 1897) and a few Zyryans; their occupation: reindeer breeding, fishing, trading; their seasonal wanderings, tents, food (*resk*, rolls of rye dough), and clothing (*malitsa* from reindeer skins); their holy place Pommokodjé, on the northern slope of the Kamen or Paë Mts.: with about a hundred wooden idols (*siatai*, five drawings reproduced on p. 10-11), a pile of reindeer skulls, the latest on a high pole; description of the ritual strangling of reindeer and explanation why the christianized Samoyeds still sacrifice to idols. Remarks on extortion by the Russian traders; their civilization, etc.

Result of a mineralogical trip of the junior author and H. J. Stjernwall in the southeastern part of Finnish Lapland in the summer of 1891.

**Copy seen:** DLC.

**25346. RAMSAY, WILHELM, 1865-1928.** Material zur Kenntnis der spätglazialen Niveaushiftungen in Finnland. Helsinki, 1931. 145 p. (Fennia, v. 54, no. 3) **Title tr.:** Materials to the

knowledge of late glacial changes of level in Finland.

Contains an account and summary of materials dealing with changes of sea level in the late glacial period in Finland. Includes sections on: shorelines of various kinds and age; the highest limits of the area affected by wave action in the past ("marine limit"); agriculture and the highest limits of past wave action; glacial river deposits and the "highest limits", etc. This general section is followed by an account of the shorelines in Finland, presented according to districts. Bibliography (over 50 items).

**Copy seen:** DLC.

**25347. RAMSAY, WILHELM, 1865-1928.** On relations between crustal movements and variations of sea-level during the late Quaternary time especially in Fennoscandia. Helsingfors, 1924. 39 p., diags. (Fennia 44:5)

Discussion of eustatic and isostatic changes of level, transgression and regression of the sea, marine limits and raised shore lines in northern Fennoscandia, etc. Bibliography (50 items).

**Copy seen:** DLC.

**25348. RAMSAY, WILHELM, 1865-1928.** Orogenesis und Klima. Helsingfors, 1910. 48 p. (Finska vetenskaps-societeten. Oversigt af förhandlingar, 1909-1910. Bd. 52, afd. A, no. 11) **Title tr.:** Orogenesis and climate.

Contains a treatise on geological climate, in which the author attempts to show that the glacial periods occurred during periods when the surface of the earth was highly deformed and uneven, whilst the warmest periods lasted when the continents were almost levelled off. An explanation of these phenomena is offered, linking the climate with the constitution of the earth's surface (relief). Bibliographical footnotes.

**Copy seen:** DLC.

**25349. RAMSAY, WILHELM, 1865-1928.** Ueber die Einwanderung von *Yoldia arctica* Gray in's Weisse Meer. (Vserossiiskoe mineralogicheskoe obshchestvo, Leningrad. Zapiski, 1900. Ser. 2, chast' 38, p. 485-90) **Title tr.:** On the migration of *Yoldia arctica* Gray in the White Sea.

Analytical remarks on Quaternary ice ages, land subsidence and marine transgressions, in relation to the appearance of the molluscan species *Yoldia arctica*, in regard to the timing of which the author

disagrees with N. M. Knipovich, in his *Zur geologischen Geschichte der Fauna des Weissen und Murman-Meeres*, 1900, q. v.  
**Copy seen:** DLC.

**25350. RAMSAYER, KARL.** Polarkarte mit Gitternetz. (Petermanns geographische Mitteilungen, 1951. Bd. 95, p. 65-67, 3 maps on plate 5) **Title tr.:** Polar map with grid.

**Contains** an attempt to draft a new type of air navigational map of the polar region. It was worked out during World War II, but destroyed in the Westermann map printing plant towards the end of the war. The author, a professor in Stuttgart, here reconstructs sketches of his map.

**25383. RATHJENS, G. W.** Arctic engineering requires knowledge of permafrost behavior. (Civil engineering, Nov. 1951. v. 21, p. 645-47, incl. illus., table, graph, diagrs.)

"Basic principles of design and construction in permafrost areas are outlined. Factors determining the treatment of arctic engineering problems include permafrost depths and temperatures and the presence of taliks below the active layer and between permafrost layers. Annual maximum and minimum air, snow and soil temperatures at Fairbanks and Point Barrow are tabulated for 1947-48 and indicate different engineering problems for these areas. The basic decision of the engineer is whether to disturb or maintain the permafrost equilibrium. The application of the basic principles governing permafrost engineering is illustrated in three construction problems and their solutions, concerning a diversion dam founded on augmented permafrost, an oil-well derrick on permafrost and a steam power plant on permafrost."—SIPRE.

**Contains** description of the development of ethnographical studies in Russia and of the role of Shternberg, q. v., his theories and works. **Copy seen:** DLC.

**25385. RATNER-SHTERNBERG, S. A.** Muzelnye materialy po Tlingitam. Ocherk 1-3. (Akademiâ nauk SSSR. Muzel

antropologii i étnografii. Sbornik, 1927, t. 6, p. 79-114, illus., 6 plates; 1929, t. 8, p. 270-301, illus., 4 plates; 1930, t. 9, p. 167-86, illus., 5 plates) **Title tr.:** Museum materials on the Tlingits, sketch 1-3.

**Contains** description of objects collected among Tlingits and preserved in the Ethnological Museum of Leningrad. Pt. 1 has title: *Muzetnye materialy po tlingitskomu shamanstvu* (Museum materials on shamanism of Tlingits). It presents description of shamanistic costumes, ornaments, masks, and other implements, brought by G. Chudnovskii in 1891 from Admiralty Island and preserved in the Museum of Anthropology and Ethnography in Leningrad. The author tries to explain the origin and significance of the shamanistic paraphernalia and quotes extensively from the literature.

Pt. 2, *Ceremonial utensils*, deals with masks, totem poles, spoons, labrets, and daggers used in the potlach ceremonial. It includes a short description of the feast, performance of dances, distribution of presents, institution of slavery and human sacrifices; discusses Tlingits' technique of dyeing.

Pt. 3, *Objects of armament and the art and rites of war* deals with: armour, helmets, shields, daggers, swords, etc. Summary in German (pt. 2 only) t. 8, p. 300-301.

**Copy seen:** DLC (pt. 2-3); NNC (pt. 1).

**25386. RAUP, HUGH MILLER, 1901- , and C. S. DENNY.** Photo interpretation of the terrain along the southern port of the Alaska Highway. Washington, D. C., U. S. Govt. Print. Off., 1950. iv, 95-135, illus., 7 plates. (U. S. Geological Survey. Bulletin 963-D) Mineral resources of Alaska, 1945-46, pt. D.

**Contains** a brief discussion of physical features, climate and permafrost, the identification of common forest trees on the ground, forest types in relation to terrain and geographic extent of forests in southeastern Yukon and British Columbia; description of the uses and limitations of vegetation as indicators of soil texture, drainage, permafrost, stability of slopes and trafficability. Includes a key for identification of vegetation on aerial photographs. Bibliography (8 items).

**Copy seen:** DGS.

**25387. RAUP, HUGH MILLER, 1901- .** Phytogeographic studies in the Athabasca-Great Slave Lake region. I. Catalogue of the vascular plants. (Har-

vard University. Arnold Arboretum, Journal, 1936. v. 17, p. 180-315, illus., 11 plates, fold. map)

**Study** of a region lying roughly between 55°-63° N. 105°-117° W., which includes Wood Buffalo Park (already treated separately, and in this paper not emphasized). Author gives a full list of collection localities, followed by an annotated, classified list of thirty-odd ferns and fernlike species, and over 600 species and varieties of flowering plants, about ten of which are described as new. Bibliography is given in part II of these studies.

**Copy seen:** DLC.

**25388. RAUP, HUGH MILLER, 1901- .** Phytogeographic studies in the Athabasca-Great Slave Lake region, II. (Harvard University. Arnold Arboretum, Journal, 1946, v. 27, p. 1-85, illus., inc. map diagrs., 5 plates, fold. map)

**History** (in brief) of botanical exploration of the area lying roughly between 55°-63° N. 105°-117° W.; its topographic features, geology, soils, climate and vegetation types; full description of its several forest types, and discussion of distribution of forest correlated with geological formations and age of surface, with climatic zones of vegetation, and with glacial and postglacial history of the species. Bibliography (171 items).

**Copy seen:** DLC.

**25389. RAUSCH, ROBERT LLOYD, 1921- .** Biotic interrelationships of helminth parasitism. (U. S. Public Health Service. Public health reports, 1951. v. 66, no. 29, p. 928-34)

**Contains** observations and conclusions based on autopsies of 4,000 Alaskan birds and mammals supplemented by extensive field studies: peculiar aspects of worm parasites in Alaska, their survival chances, trichinosis in marine mammals and in man, tapeworm infections. Bibliography (20 items).

**Copy seen:** DLC.

**25390. RAUSCH, ROBERT LLOYD, 1921- , and E. L. SCHILLER.** Hydatid disease (Echinococcosis) in Alaska and the importance of rodent intermediate hosts. (Science, Jan. 19, 1951. v. 113, p. 57-58, illus.)

**Discussion** of a potential public health hazard in the disease caused by the larval form of a tapeworm *Echinococcus granulosus*, found in arctic mammals including foxes, dogs, reindeer, and moose, and here reported in the tundra vole *Microtus oeconomus inuitus*.

**Copy seen:** DGS.

**25391. RAUSCH, ROBERT LLOYD, 1921-** . Hydatid disease in boreal regions. (Arctic, Oct. 1952. v. 5, no. 3, p. 157-74, illus.)

Contains an account of echinococcosis as one of the more important helminthic diseases which may be transmitted by lower mammals to man. The biology and life-cycle of the *Echinococcus* genus of tapeworms is outlined; pathogenesis, diagnosis and treatment of the disease, animal cycles involved in spreading it, and its control are discussed. Its occurrence in Finland and Norway (slight), U.S.S.R., Sweden, Iceland, Canada and Alaska is indicated with references to the reporting literature. The "ample opportunity" for infection of adults and children from dogs (and to some extent foxes) in arctic regions is shown. Bibliography (about 40 items).

**Copy seen:** CA:MAI; DLC.

**25392. RAUSCH, ROBERT LLOYD, 1921-** . Notes on microtine rodents from the Brooks Range, Arctic Alaska. (Washington Academy of Sciences. Journal, Apr. 1950. v. 40, p. 133-36)

Field notes, and remarks on taxonomy, of three species of voles, including description of *Microtus miurus paneaki*, n. subsp., and brief notes on two species of lemmings, collected in the northern edge of the Endicott section of Brooks Range, during parasitological studies for the U. S. Public Health Service in 1949. Bibliography (6 items).

**Copy seen:** DGS; DLC.

**25393. RAUSCH, ROBERT LLOYD, 1921-** . Notes on the distribution of some arctic mammals. (Journal of mammalogy, Nov. 1950. v. 31, p. 464-66)

Field notes on distribution (only) of 26 species of mammals collected or recorded from northern Alaska in 1949-50, mostly in the vicinity of Tulugak Lake (68°24' N. 151°26' W.) and at Umiat (69°23' N. 152°10' W.).

**Copy seen:** DSI-M.

**25394. RAUSCH, ROBERT LLOYD, 1921-** . Notes on the Nunamiut Eskimo and mammals of the Anaktuvuk region, Brooks Range, Alaska. (Arctic, Dec. 1951. v. 4, p. 147-95, 14 illus., incl. sketch maps, 5 tables)

Contains an account of the biological nature of the mammals and their relationship to the local Eskimos, based on field observations (particularly in the Tulugak Lake area, 68°20' N. 151°26'

W.) made during 1949-51 in connection with a study of animal-borne diseases. It consists of 3 parts: (1) description of the country (physiography; climate; vegetation); (2) the people (physical characteristics, history, dwellings, clothing, food, transportation, hunting implements, etc., of an inland group of nomadic caribou hunters, now becoming adapted to white man's culture); (3) Brooks Range mammals, offering extensive data (including local Eskimo names) on 31 species especially those of economic value: occurrence, migrations, color, age composition of herds, diseases and parasites; enemies; hunting, etc. Sketch of a corral formerly used for capturing caribou is given. Bibliography (31 items). Dr. Rausch is a member of the Arctic Health Research Center, U. S. Public Health Service, at Anchorage, Alaska. The Nunamiut Eskimos are also treated in a full length study by H. Ingstad, q. v.

**Copy seen:** DLC.

**25395. RAUSCH, ROBERT LLOYD, 1921-** . Observations on a cyclic decline of lemmings (*Lemmus*) on the arctic coast of Alaska during the spring of 1949. (Arctic, Dec. 1950. v. 3, p. 166-77, illus., map)

Results of observations carried out at the Arctic Research Laboratory, Point Barrow region (1) "during the peak density" preceding the cyclic decline occurring in the spring of 1949, (2) during the decline, and (3) for more than a year subsequent to it. The conclusions (a) relate the four-year cycle of lemming abundance with snowy owl, pomarine jaeger, and arctic fox abundance, also (according to evidence of Eskimos) with good sea hunting; (b) show lack of evidence of bacterial or parasitic cause for the decline; (c) call for more and sustained research into "factors involved in the high mortality which often follows high population densities of lemmings." Bibliography (15 items).

**Copy seen:** DAI; DLC.

**25396. RAUSCH, ROBERT LLOYD, 1921-** . Studien an der Helminthenfauna von Alaska, IV. *Haploparaxis galli* n. sp. ein Cestode aus dem Schneehuhn, *Lagopus rupestris* (Gmelin). (Zeitschrift für Parasitenkunde, 1951. Bd. 15, heft 1, p. 1-3, 4 fig.) **Title tr.:** Studies on the helminth fauna of Alaska, IV. *Haploparaxis galli* n. sp. a cestode of the ptarmigan *Lagopus rupestris* (Gmelin).

Contains a description of a new species of tape-worm from the intestine of a ptarmigan taken on Tulugak Lake (68°24' N., 151°26' W.). A differentiation from related forms is given. Bibliography (2 items). **Copy seen:** DLC.

**25397. RAUSCH, ROBERT LLOYD, 1921-**, and **BETTY LOCKER**. Studies on the helminth fauna of Alaska, II. On some helminths parasitic in the sea otter *Enhydra lutris* (L.). (Helminthological Society of Washington. Proceedings, Jan. 1951. v. 18, no. 1, p. 77-81, illus.)

Contains a description of four species of these worms with references to earlier observations and nomenclature. A fifth, new, species, *Microphallus enhydrae*, n. sp. is described in detail. Bibliography (9 items). **Copy seen:** DSG.

**25398. RAUSCH, ROBERT LLOYD, 1921-**. Studies on the helminth fauna of Alaska, VII. On some helminths from arctic marmots with the description of *Catenotaenia reggiae* n. sp. (Cestoda: Anoplocephalidae). (Journal of parasitology, Aug. 1951. v. 37, p. 415-17)

In a series of twenty-odd *Marmota caligata broweri* collected in the Brooks Range (Tulugak and Kanayut Lakes region, 68°24' N. 151°26' W.) three species occurred frequently, of which one is described. This collection extends the known range of this marmot, and contributes the first information on Brooks Range marmots. Bibliography (5 items).

**Copy seen:** DSI-M.

**25399. RAUSCH, ROBERT LLOYD, 1921-**. Studies on the helminth fauna of Alaska, XI. Helminth parasites of microtine rodents. Taxonomic considerations. (Journal of parasitology, Oct. 1952. v. 38, no. 5, p. 415-444, plates, tables, map)

Contains a report on work conducted by the author for the past three years, with emphasis on qualitative, taxonomic aspects; most of the 2078 rodents examined were from Alaska, with some supplementary material from northern Canada and Eurasia; only rodents of the subfamily Microtinae were studied. Twenty-eight species of helminths are considered, and of these, two new ones *Paranoplocephala lemni*, n. sp. and *Andrya arctica*, n. sp. (both from Point Barrow) are described in detail. Bibliography (over 40 items). **Copy seen:** DA.

**25404. RAVILA, PAAVO ILMARI, 1902-** . Beiträge zur Geschichte der finnisch-ugrischen l-Laute. (Finnisch-ugrische Forschungen, 1929. Bd. 20, p. 47-120) *Title tr.: Contributions to the history of the Finno-Ugric l-sound.*

*As a starting point, the author takes the Ostyak words in 54 cases.*

*Copy seen: DLC; InU.*

**25405. RAVILA, PAAVO ILMARI, 1902-** . Kai Donner (1888-1935). (Finnisch-ugrische Forschungen. Anzeiger, 1935. Bd. 23, no. 1-3, p. 268-70)

*Contains obituary with biographic sketch and tribute to the Finnish scholar who collected a great amount of very important linguistic and folkloristic material among the Samoyeds and Yeniseians (Kets) in 1911-13, and published several important works on those peoples, especially the Samoyeds.*

*Copy seen: DLC; InU.*

**25406. RAVILA, PAAVO ILMARI, 1902-** . Das Quantitätssystem des seelappischen Dialektes von Maattivuono. Helsinki, 1932. vi, 143 p. (Suomalais-ugrilainen seura. Toimituksia, no. 62) *Title tr.: The quantity system of the sea Lapp dialect of Maattivuono.*

*Description and historical consideration of the quantity system of consonants and vowels of a Lappish dialect. The author visited this place in the Petsamo region twice in 1929/30 to obtain authentic material.*

*Copy seen: DLC; InU.*

**25407. RAVILA, PAAVO ILMARI, 1902-** . Reste lappischen Volksglaubens. Helsinki, Suomalais-ugrilainen seura, 1934. 162 p. (Suomalais-ugrilainen seura. Toimituksia, no. 68) *Title tr.: Relics of popular beliefs among the Lapps.*

*Contains material written down in 1932/33 from a young Lapp (and his family) living in the village of Kittilompola near the lake of Paudujärvi in Inari parish, who was brought to Helsinki for treatment of an eye injury. The texts, given in original Lapp with German translation, are grouped in the following chapters: marriage, women's affairs, birth and childhood; death and burial; the magic of sorceress, Anna; thunderstorm; reindeer sacrifice; customs of fishermen in olden times; the wooden idols; the spirits; the magic drum and the drumming women; divination at New Year, and miscellaneous.*

*Copy seen: DLC; InU.*

**25408. RAVILA, PAAVO ILMARI, 1902-** . La société finno-ougrienne (1883-1933). (Suomalais-ugrilainen seura. Aikakauskirja, 1933. v. 46, no. 2, p. 1-66, illus. Also published in Finnish in the same journal, v. 46, no. 1, p. 1-66, illus.) *Title tr.: The Finno-Ugric Society (1883-1933).*

*Contains a history of the society: its foundation, regulations, outstanding leaders (with portraits), library and archives, expeditions and materials collected (linguistic and ethnological), publications, etc. Includes reports on research on the Lapps, Zyryans, Ostyaks, Voguls, Samoyeds, and Yeniseians.*

*Copy seen: DLC; InU.*

**25409. RAVILA, PAAVO ILMARI, 1902-** . Die Stellung der Lappischen innerhalb der finnisch-ugrischen Sprachfamilie. (Finnisch-ugrische Forschungen, 1935. Bd. 23, p. 20-65) *Title tr.: The place of Lappish within the Finno-Ugric linguistic family.*

*Contains a study of the Lapps, their language close to that of the Baltic Finns, but their racial appearance and ethnology quite different, having many features in common with the Samoyeds.*

Attempts made by R. Virchow and K. Nielsen to affiliate the Lapps with the Samoyeds are noted; and some words discussed which are common to Lapp and Samoyed and unknown in other Finno-Ugric languages, words concerned with primitive forms of reindeer husbandry. There is not yet definite proof however, the author concluded, that the Lapps were a part of the Samoyed folk who migrated to the West and adopted the Finnish language. It is also possible that the Lapps are a very old arctic people living for thousands of years in this region, and that the Finnish language was adopted comparatively late.

Results of investigations made during 1944-47 for the Fisheries Research Board of Canada, sketch of the physico-geographic environs, the vegetation, climate and drainage of the region; report on the lake's dimensions, shoreline, area, depth, volume, water levels; surface, deep and mean water temperatures, heat budget, regional temperatures, and ice conditions; light penetration; seasonal cycle, amounts and deficits of dissolved oxygen; and oxygen figures for certain bays;

pH, mineral analyses, and typology (ecologic). Bibliography (43 items).

*Copy seen:* DLC; DSI-M.

- 25413. RAY, LOUIS L.** Permafrost. (Arctic, Dec. 1951. v. 4, no. 3, p. 196-203)

*Contains* text of a lecture delivered before the Permafrost Symposium at the First Alaskan Science Conference, Nov. 1950, Washington, D. C., dealing with the history of knowledge and exploration of permafrost; definitions and terminology; distribution and character: its vertical distribution, zones, kinds, etc; relation to climatic fluctuations; ice in permafrost; relation to vegetation; ground water, etc.

"Permafrost or perennially frozen ground extends over one-fifth of the land area of the earth. Regions of permafrost have been classed as: continuous, discontinuous and sporadic. Permafrost has been observed to depths of approximately 2000 ft. in Siberia and 1000 ft. in Alaska. The temperature below the level of zero amplitude within the permafrost ranges from slightly less than 0° C. to several degrees below 0° C. The surface layer above the permafrost thaws partially or completely and is called the active zone. Plants are rooted in it and all churning and soil movements take place in the active zone. An unfrozen layer between the permafrost table and the active zone, or . . . within or below the permafrost, is called talik. Observations indicate that the southern boundary of permafrost is slowly moving northward due to present climatic fluctuations. Utilization of permafrost and the problems involved are discussed."—SIPRE. Bibliography (16 items).

Contains German diagnoses of five new ascidians from the Okhotsk Sea (Shantar Islands) and of *Synoiicum sabuliferum* n. sp. found in Kronotskiy Bay, Kamchatka waters.

**Copy seen:** MH-Z.

**25425. REDIKORTSEV, VLADIMIR VLADIMIROVICH, 1873-** . Eine neue *Rhizomolgula* - Art. (Akademifâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1908. t. 13, no. 3, p. 327-31, illus.) **Title tr.:** A new species of *Rhizomolgula*.

Contains a description of a new sea squirt, *Rhizomolgula warchowskii*, found in Matochkin Shar, Novaya Zemlya.

**Copy seen:** DLC; MH-Z.

**25426. REDIKORTSEV, VLADIMIR VLADIMIROVICH, 1873-** . A new species of the genus *Diandrocarpa*. (Akademifâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, pub. 1917. t. 21, p. 31-33, illus.)

Contains a description of *Diandrocarpa okai* n. sp., a new tunicate collected by Dr. Meder in Okhotsk Sea (56°18' N. 145°4' E. and 60°18' N. 158°13' E.).

**Copy seen:** DLC; MH-Z.

**25427. REDIKORTSEV, VLADIMIR VLADIMIROVICH, 1873-** . Pseudoscorpions nouveaux, II. (Akademifâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1922. t. 23, no. 2, p. 257-72, illus.)

Contains descriptions of six new species of pseudoscorpions from various regions, including *Obisium brevipalpe* n. sp. native to Kamchatka Peninsula. Pt. 1 does not include arctic material.

**Copy seen:** DLC; MH-Z.

**25428. REDIKORTSEV, VLADIMIR VLADIMIROVICH, 1873-** . *Tethyum rhizopus* var. *murmanense*, eine neue Ascidie von der Murmanküste. (Akademifâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1911. t. 16, no. 1, p. 61-64, illus.,

plate 1) **Title tr.:** *Tethyum rhizopus* var. *murmanense*, a new ascidian from the Murman coast.

Contains a German description of *Tethyum rhizopus* var. *murmanense*, a new sea squirt found in 1909 near Bol'shoy Oleniy Island, off the Murman coast, Barents Sea.

**Copy seen:** DLC; MH-Z.

**25429. REDIKORTSEV, VLADIMIR VLADIMIROVICH, 1873-** . Zwei neue *Chelyosoma* - Arten. (Akademifâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1911. t. 16, no. 1, p. 143-51, fold. table) **Title tr.:** Two new species of *Chelyosoma*.

Contains descriptions of two new sea squirts, including *Chelyosoma ochotense* n. sp. and a table for comparative study of four *Chelyosoma* species, including also *C. macleayanum* native to Bering and Okhotsk Seas.

**Copy seen:** DLC; MH-Z.

**25430. REECE, ALAN.** Analysis of sledge journeys. (Polar record, July 1950. v. 5, no. 40, p. 585-88, table)

Contains a table and explanatory text on sledging of an antarctic party (at Falkland Islands Dependencies Survey base, Hope Bay, Graham Land). The table gives day-to-day record of a sledge trip Dec. 6, 1946-Jan. 5, 1947: data on destinations, times, height of camp, loads per dog, wind direction and force, temperature, with note of weather and surface, which "appears to contain all the information required" for an accurate appraisal of a journey. Metric equivalents of measurements are added.

**Copy seen:** DLC.

**25431. REED, JOHN CALVIN, 1905-** . Alaska—ein kommandes Land. (Umschau, June 1, 1950. Jahrg. 50, p. 344-45) **Title tr.:** Alaska, a coming country.

Brief remarks to accompany four photographs of physiographic features in Alaska; drawn from his *Alaska and the Geological Survey*, 1949 (Arctic Bibliography, No. 14317). **Copy seen:** DLC.

**25432. REED, JOHN CALVIN, 1905-** , and H. J. COOLIDGE. The Alaskan Science Conference. (Science, Mar. 2, 1951. v. 113, p. 223-27)

In pt. 1, J. C. Reed states the objectives of this conference held in Washington, Nov. 9-11, 1950, and discusses briefly

the status of scientific research in Alaska, its major requirements, and ways and means stimulating it.

In pt. 2, H. J. Coolidge notes the participants in this conference and reviews its proceedings according to subject fields. **Copy seen:** DGS; DLC.

**25433. REEDS, CHESTER A.** Living glaciers. (Natural history, July-Aug. 1928. v. 28, p. 379-93, illus.)

Article for the general reader, on occurrence, distribution, types and nature of glaciers throughout the world.

**Copy seen:** DLC; DSI-M.

**25434. REGEL, EDUARD AUGUST von, 1815-1892.** Uebersicht der Arten der Gattung *Thalictrum*, welche in Russischen Reiche und den angrenzenden Laendern wachse. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1861. t. 34, no. 1, p. 14-63, plates 1-3) **Title tr.:** Review of the species of the genus *Thalictrum* growing in Russia and adjoining countries.

Contains a critical revision of herbaceous genus *Thalictrum*, with a key to the species and a systematic enumeration of 19 species and several varieties, synonymy, Latin descriptions, critical notes and data on distribution in Russia and adjoining countries; includes some species native to northern Siberia and Kamchatka.

**Copy seen:** DLC; MH-A.

**25435. REGELE, OSKAR.** Die "Payer-Weyprecht-Ausstellung" in Wien 1949/1950. (Polarforschung, 1950, pub. 1951. Bd. 2, Jahrg. 20, p. 357-60) **Title tr.:** The Payer-Weyprecht Exhibit in Vienna, 1949-50.

A government-sponsored exhibit memorializing the 75th anniversary of the return of the Austro-Hungarian North Polar Expedition, 1872-74, and celebrating the Austrian contribution generally to polar exploration and research.

**Copy seen:** DGS.

**25436. REIKHARDT, AKSEL' NIKOLAEVICH.** Nauchnye rezul'taty Äakutskoi ekspeditsii Akademii nauk SSSR 1925 i 1926 gg. Materialy k faune Histeridae (Coleoptera) Äakutii. (Akademii nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1931, pub. 1932. t. 32, vyp. 4, p. 541-58) **Title tr.:** Scientific results of the Yakut Expedition of the Academy of Sciences, 1925-26. Materials for the Histeridae (Coleoptera) fauna of Yakutia.

Contains a systematic list of 30 beetles

of the fam. Histeridae belonging to the fauna of Yakutia and based chiefly on the material collected in 1925-26 by the Expedition of the Academy of Sciences with lists of localities and data on distribution in adjoining regions. Summary in German.

**Copy seen:** MH-Z.

**25437. REIKHARDT, AKSEL' NIKOLAEVICH.** Zametki o palearkticheskikh Histeridae (Coleoptera), I. (Russkoe entomologicheskoe obozrenie, 1926. t. 20, vyp. 3-4, p. 269-74) **Title tr.:** Notes on palaearctic Histeridae (Coleoptera), I.

Contains critical notes on 19 species of coleopterous family Histeridae, including *Hister striola* native to Kamchatka Peninsula. Other parts of this work do not contain arctic material. Summary in German. **Copy seen:** DSI-M; MH-Z.

**25438. REIN, GABRIEL.** Materialier till utredande af Finlands statistik. II. Uleåborgs Lan. Helsingfors, 1867. 371 p., tables. (Bidrag till kannedom af Finlands natur och folk, Häfte 10) **Title tr.:** Materials for explanation of the statistics on Finland, II. The county of Uleåborg.

On the basis of data which he collected in 1863 from various official and other sources, the author offers chapters on the history and (from his personal observations), the life and nature of this county, which includes the region north of the Arctic Circle. He presents a statistical abstract of areas under cultivation, agricultural and other products, public finances, property, trade, occupations, population, monthly air temperatures, for Sodankylä 1857-63, and Muonioniska, 1849-58; also data on freeze-up and break-up on inland waters, ripening of crops, arrival and departure of birds, etc.

**Copy seen:** DLC.

**25439. REINDEER COUNCIL OF THE UNITED KINGDOM.** First annual report 1949-1950. Cambridge, 1950. 8 p., illus.

Lists officers; outlines Council's object "to encourage experiments in reindeer-breeding in suitable areas in Scotland and/or overseas"; unsuccessful efforts since 1948 to import 25 reindeer from northern Sweden for experimental establishment in the Scottish Highlands.

**Copy seen:** CaMAI.

Contains descriptions of four new genera and five new species of foraminifers, found in Cambrian deposits in the Aldan River basin, Yakutia, during geological investigation of that region in 1946.

*Copy seen:* DLC; MH-Z.

**REITTER, EDMUND, 1845-1920**, see Chicherin, T. S. Mémoire sur *Trichocellus*. 1899. No. 21185.

**25441. REKSTAD, JOHN BERNHARD, 1852-1934.** Beskrivelse til kartbladet Dønna. Christiania, A. W. Brøgger, 1904. 32 p. illus. (Norges geologiske undersøgelse, no. 37; Aarbog for 1904, no. 5) *Title tr.*: Description of the geological map of the Dønna Region.

Contains data on rock formations of the Dønna district, northern Helgeland (66°-60'20" N.), with notes on glacial striation, shore line, two systems of depressions in the shape of fiords and sounds; lists of fossil molluscs from various localities and the upper and lower terraces. Summary in English.

*Copy seen:* MH-Z.

**25442. REKSTAD, JOHN BERNHARD, 1852-1934, and J. H. L. VOGT.** Søndre Helgelands kvartaergeologi. (In: Vogt, J. H. L., Søndre Helgeland, 1900. p. 62-112, 150-57, 170-75, illus.) *Title tr.*: Quaternary geology of southern Helgeland.

Contains a study of Quaternary geology of the southern Helgeland district of Nordland province in northern Norway, with data on morainic deposits (p. 62-65), coastline and high terraces (p. 66-85, 150-54), lower terraces and fossil molluscs encountered there (p. 85-94, 155-56), "torghatten" (see illus., p. 95-97) and other caves near the coastline (p. 95-105, 152), and a discussion of ocean currents at the end of the ice age (p.

105-110, 156-57). Summary in German, p. 170-75. *Copy seen:* MH-Z.

**25443. REMPEL, J. G.** A guide to the mosquito larvae of western Canada. (Canadian journal of research, Aug. 1950. v. 28, sect. D, p. 207-48, incl. 15 plates, sketch map)

Keys and descriptive notes to the 6 genera and 46 species of mosquito larvae represented in the fauna of Canada's four western provinces, with distribution also in Yukon and (in some cases) Alaska. Bibliography (15 items).

*Copy seen:* DGS; DSI-M.

**25444. REMPP, GEORG, 1882- , and A. WAGNER.** Die Hydrodynamik des Föhns und die "lokalen Winde" in Spitzbergen. 1917. 12 p., 2 tables. (Deutsches Observatorium Ebeltofhafen-Spitzbergen. Veröffentlichungen, v. 7) *Title tr.*: Hydrodynamics of the föhns and "local winds" in Spitzbergen.

Publication of the German meteorological observatory established in 1910 at Ebeltofhamna 79° N. 11°30' E. on Vestspitsbergen. "Hydrodynamic conditions of föhn and bora are described, and the local winds in fiords open to N and W are analyzed. The conclusion is drawn that in autumn and winter those local winds are developed in strict accordance with the dynamic conditions of föhn as interpreted by R. Wenger."—*Meteorological abstracts and bibliography*, July 1951. v. 2, no. 7, p. 600.

**25445. RENAUD, ANDRÉ.** Contribution à l'étude du grain de Glacier. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo. Procès-verbaux des séances. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 213-15, diagr.) *Title tr.*: Contribution to the study of the glacier grain.

Also published in English in somewhat expanded form, see item following.

*Copy seen:* DGS.

**25446. RENAUD, ANDRÉ.** A contribution to the study of the glacier grain. (Journal of glaciology, Oct. 1949. v. 1, p. 320-24, tables, graph)

"This paper was presented in shorter form to the International Commission on Snow and Glaciers, Oslo, 20 August 1948"—p. 324.

"The melting of glacier ice always begins at the surface of the glacier grains,

A mass of glacier ice at a temperature near the melting point becomes an aggregate of crystals separated by a film of liquid. The electrical conductivity of ice subjected to differential melting is higher if the fractions originate in the grain surfaces rather than in the crystal centres. It is concluded that the glacier grain consists of a crystal of pure ice with a surrounding film of brine, thus verifying the hypotheses of Buchanan and of Quincke on the formation of natural and artificial ice. The growth of the grain is facilitated by the elimination of the saline skin between neighboring crystals, the resulting coalescence having the character of autogenous welding. The intergranular film of liquid may act as a lubricant in the as yet inadequately explained mechanism of glacier flow."—SIPRE.

**25449. RENKONEN, OLAVI.** Statistisch-ökologische Untersuchungen über die terrestrische Käferwelt der Finnischen

Bruchmoore. Helsinki, 1938. 231 p., tables, diagrs., map. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Annales zoologici, v. 6, no. 1) **Title tr.:** Statistical-ecological investigation of the terrestrial beetle population of Finnish bogs.

Contains a largely theoretical, biocoenological study concerning the relation of the terrestrial beetles to the bog-types established by Cajander. Eight areas were studied, one of them north of the Arctic Circle at Pallastunturi (p. 24-40); successive sections deal with: the living conditions of beetles in the moors; problems of autecology; synecology of the areas investigated, and a comparison with the moor types established by Cajander (p. 215-19). Author reaches the conclusion that several other factors (e. g. climate, water conditions, etc.) in addition to the bog-type determine the character and composition of the beetle populations. **Bibliography (over 150 items).** Summary in Finnish.

**Copy seen:** DLC.

**25450. RENKONEN, OLAVI.** Über das Vorkommen der *Stenus*-Arten (Col. Staph.) an verschiedenen Wohnorten in Finnland. Helsinki, 1934. 30 p., illus. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Annales zoologici, 1:4) **Title tr.:** On the occurrence of *Stenus*-species (Col. Staph.) in various habitats in Finland.

An ecological study of this beetle in Finland, including some northern areas. The occurrence and life of these species on beaches, bogs, forests and farmland are discussed. The question of preference of habitat and morpho-physiological phenomena connected with competition are analyzed. **Bibliography (4 items).** Summary in Finnish.

**25451. RENQVIST, HENRIK, 1883- .** Kasvillisuuden peittäjä osa Suomen järviä. (Terra, 1932. 44:1, p. 47-56, tables, diagrs.) **Title tr.:** The areas covered by vegetation in the lakes of Finland.

Preliminary work based on study of 174 lakes of three sizes, from which the percentage of lake area under vegetation is determined. Includes data on five large lakes in northern Finland. Summary in German. **Copy seen:** DLC.

**25452. RENQVIST, HENRIK, 1883- .** Kuusamon maanjäristys ja sen johdosta

sananen. (Terra, 1926. 38:4, p. 159-70, map) *Title tr.:* The earthquake at Kuusamo.

By questionnaire, by the use of the Mercalli-Cancani scale with improvements by Sieberg, and with data from nearby seismographic stations, author located the macroseismic epicenter of the earthquake of July 18, 1926 at 65½° N. 28½° E. Map shows the degree of intensity of the quake from 63°30' N. to 67°15' N. *Copy seen:* DLC.

**25453. RENQVIST, HENRIK, 1883-** . Största dagsummer av nederbörden i Finland. Helsingfors, 1915. 13 p., diagrs. tables. (Fennia, 38:5) *Title tr.:* Daily maxima of precipitation in Finland.

*Contains* on the basis of observations of daily precipitations of over 40 mm., 1882-1913, information on the dates of such precipitations (daily maxima); number of observation points in various years; observations over longer periods; frequency and area relations, etc.

*Copy seen:* DLC.

**25454. RENQVIST, HENRIK, 1883-** . Suomen sisävedet. (Finland. Hydrografen toimisto. Tiedonantoja (Meddelanden från Hydrografiska byran), 1951. v. 13, p. 145-80, tables, maps, diagrs.) *Title tr.:* The inland waters of Finland.

A statistical survey of Finnish rivers and lakes, the latter, estimated to number 55,000 and to cover eight percent of the land area of the country; with eight percent of the watershed areas draining into the arctic seas. Includes data on Lake Inari, 69° N. lat., and on the Paats, Teno, Oulanka, Tulema and Näätämö Rivers in the northern part of Finland. Discussion of lakes, their origin, general form and depth; factors affecting their depth and declivity, water temperatures, etc. Watershed areas and rivers: water division factors and ground water; water-level characteristics; the length and rainfall area of streams and rivers; curves, valleys and wearing; discharge ratios and their yearly averages; changes in water level; water power resources and the use of rivers in transportation. The percentage of lake area, rainfall, flow, evaporation, water bodies, and discharge are shown by area. Bibliography (15 items).

(North Pacific Planning Project. North Pacific Study. [no. 3]) Mimeographed. *Other authors:* S. Mirick and G. Sundborg.

"A study of comparative costs for shipment of 88 selected commodities from Seattle, Washington, to Fairbanks, Alaska, via steamship and the Alaska Railroad against shipment by steamship to Haines and Valdez and thence to Fairbanks by truck."—title-page.

Authors discuss comparative distances and strategic locations of the Haines Route and Richardson Highway from

the point of view of a possible future expansion of trucking, neither of these roads at that time having truckage competitive with Alaska Railroad freight rates.

Häfte 85, no. 3) *Title tr.:* Plant phenological observations in Finland: 1927, 1928, 1929 and 1930.

Similar to previous years' reports by this author in this journal.

*Copy seen:* DLC.

**25481. REUTER, MÄRTA, 1902-** . Pflanzenphänologische Beobachtungen in Finnland 1931-1935. Helsingfors, 1941. 97 p. (tables, map). (Bidrag till kännedom af Finlands natur och folk. Häfte 87, no. 4) *Title tr.:* Plant phenological observations in Finland, 1931-1935.

Report similar to those for previous years published in this journal.

*Copy seen:* DLC.

**25482. REUTER, MÄRTA, 1902-** . Pflanzenphänologische Beobachtungen in Finnland, 1936-1940. Helsingfors, 1942. 118 p. (tables, map). (Bidrag till kännedom af Finlands natur och folk. Häfte 89, no. 1) *Title tr.:* Plant phenological observations in Finland, 1936-40.

Report similar to those for previous years, except that the altitude of the observation stations is omitted here and the plant nomenclature modernized.

*Copy seen:* DSI-M.

**25483. REUTER, MÄRTA, 1902-** . Pflanzenphänologische Beobachtungen in Finnland, 1941-1945. Helsingfors, 1948. 78 p. (tables, map). (Bidrag till kännedom af Finlands natur och folk. Häfte 92, no. 1).

Report similar to that for 1936-40 by

this scientist. This report was previously listed as *Arctic Bibliography*, No. 14420.

*Copy seen:* DLC.

**25484. REUTER, MÄRTA, 1902-** . Tierphänologische Beobachtungen in Finnland 1897-1902. Helsingfors, 1939. 63 p. (tables). (Bidrag till kännedom af Finlands natur och folk. Häfte 87, no. 1) *Title tr.:* Animal phenological observations in Finland 1897-1902.

Observational data presented in tabular form were collected from 105 stations, nine of them north of the Arctic Circle. They cover most common birds, fishes, amphibians and insects; their migration, courting, nesting and wintering. For previous years' reports, see under K. E. Stenroos (1895) and K. M. Levander (1896); subsequent years' reports were worked up by K. M. Levander and by the present author.

*Copy seen:* DLC.

**25485. REUTER, MÄRTA, 1902-** . Tierphänologische Beobachtungen in Finnland. 1912. Helsingfors, 1930. 90 p. (tables, map). (Bidrag till kännedom af Finlands natur och folk. Häfte 83, no. 2) *Title tr.:* Animal phenological observations in Finland 1912.

Based on reports from 69 observers (listed with their location) including a few in the North. Migrations (or appearance) and reproductive activities of birds, amphibia, fishes and insects are considered. Meteorological data are included. For previous years' reports see under K. E. Stenroos (for 1895) and K. M. Levander.

**25511. REYNOLDS, ERNEST EDWIN, 1894-** . Nansen. London. G. Bles, [1932]. xi, 274 p., plates (inc. port.), 2 maps (1 fold.) New edition with "a few details" added was published by Penguin Books, Harmondsworth, Eng. 1949 (283 p., 2 sketch maps).

Informative biography for general readers with chapters on Nansen's early years, his first arctic trip on the sealer *Viking* in 1882, his sledge and ski trip across the Greenland icecap in 1888-89, the voyage and drift of the *Fram* during 1893-96, including Nansen's sledge trip northward over the ice of the Arctic Basin, and return to Franz Josef Land; his scientific work and development of oceanographic research in Norway, trip of the *Michael Sars* 1900, on the *Veslemøy* 1912 to investigate Svalbard waters; on the *Correct* to the Yenisey River and across Siberia in 1913. Nansen's international humanitarian activities after World War I, his work for the League of Nations, 1919-29 in connection with rehabilitation of prisoners of war, refugees, the American problem. Includes throughout, extensive excerpts from Nansen's reports and narratives on each enterprise.

**25514. RHODES, A. J., and others.** An outbreak of poliomyelitis in Canadian Eskimos in wintertime; laboratory investigations. (Canadian journal of public health, 1949. v. 40, p. 418-19, table) **Other authors:** E. M. Clark, A. Goodfellow, and W. L. Donohue.

Pathological specimens examined were from Eskimos involved in an epidemic of poliomyelitis at Chesterfield Inlet (on the west coast of Hudson Bay) in the winter of 1949. Polio virus, producing typical clinical and histological appearances in rhesus monkeys, was demonstrated in the brain and cord of 2 cases of suspected poliomyelitis. Virus was also demonstrated in 2 stool preparations and one sample of throat washing. There seems to be no doubt that the epidemic was one of acute anterior poliomyelitis. For description of epidemic, see Adamson, and others: Polyomyelitis in the Arctic, 1949.

**Note:** this paper, listed previously as *Arctic Bibliography* No. 14448, is included here for coordination with related material listed in this volume.

**25523. RICHENS, R. H.** Crop production in the Soviet Arctic. (Polar record, July 1951. v. 6, no. 42, p. 227-36)

**Contains** (on the basis of Russian reports and accounts of three foreign visitors: a botanist, an agriculturist and a journalist) outline of Soviet agriculturalists' efforts and achievement in providing conditions for plant growth in the North, also discussion of whether food and fodder could be supplied there more economically by transportation from milder climatic areas. Deals briefly with physiographic conditions and human settlement; in more detail with special methods of cultivation in relation to the limiting factors of low temperature, drought, poor soil; selection (not breeding) of varieties adapted to northern growth; cereals, root crops, green vegetables; forage crops; crops under glass; economics of production. Of cereals, oats and rye are grown widely and, since often not maturing, used largely as green forage, together with grasses and clovers. Potatoes are one of the most important crops, other root plants include turnips and swedes, carrots, table beets and radishes. Cabbage is the most successful green vegetable, and grown throughout the area; kohlrabi, cauliflower, lettuce, spinach, peas, etc., are also grown in the open. Crop production under glass is extensive and the sole method on the arctic islands where low temperatures

preclude farming in the open. Soviet arctic farming, developed largely to supply the quickly growing local industrial population, is according to a guarded estimate of the author, supplying about 40 per cent of the local forage demand; potatoes and vegetables about one per cent each.

**25525. RICKETTS, EDWARD FLANDERS, 1896-1948, and J. CALVIN.** Between Pacific tides. An account of the habits and habitats of some five hundred of the common, conspicuous sea-shore invertebrates of the Pacific Coast between Sitka, Alaska, and northern Mexico. Stanford, Cal., Stanford University Press, [rev. ed.] 1948. xxvii, 365 p. illus., tables, diagrs.

Contains accounts of animals from the following habitats: protected outer coast (rocky shores, sandy beaches); open coast (rocky shores, sandy beaches); bay and estuary (rocky shores, sand flats, mud flats, eel grass); wharf piling (exposed piles, protected piles). The last section deals with the plankton of the Pacific coast. **Appendix** with: annotated systematic index and bibliography; bibliography of non-specific accounts (about 75 items). Bibliographical footnotes.

An earlier (1938) edition (320 p.) has practically the same content except for the chapter on plankton, bibliographic citations and some new illustrations in the revised edition. **Copy seen:** NNM.

"A method is outlined for obtaining

weather estimates and forecasts of a general nature over any ocean area of the middle and high latitudes for which aerological data from adjacent shores are available. The method of reconstructing the weather conditions over the ocean from shore data is illustrated by the analysis of two different weather situations over the northeast Pacific Ocean, using reports from the Pacific Coast, Alaska, and Honolulu only. Two independent analyses of each case were prepared to demonstrate that two forecasters using this method should arrive at the same conclusions."—*Meteorological abstracts and bibliography*, May 1952 v. 3, no. 5, p. 482. **RILEY, G. C.,** see Baird, P. D., & others. Baffin I. Exped. 1950; prelim. report. 1950. No. 20413.

**25532. RING, GORDON C.** The importance of the thyroid in maintaining an adequate production of heat during exposure to cold. (American journal of physiology, Oct. 1942. v. 137, p. 582-88)

**Contains** a report on experiments, with adult male rats, designed to elucidate the possible role of the thyroid in sensitizing the response to epinephrine. The calorigenic response to epinephrine under various conditions of thyroid activity was therefore studied, including reactions to prolonged exposure to cold. The results indicate that thyroxin potentiates the maximal metabolic response to cold as well as the response to epinephrine. Bibliography (10 items).

**Copy seen:** DLC.

**25533. RING, GORDON C.** Metabolism and body temperature of normal and adrenalectomized rats during exposure to cold. (American journal of physiology, May 1938. v. 122, p. 435-45, 6 fig.)

**Contains** a study on normal, partly and fully adrenalectomized rats. Complete adrenalectomy was found to depress many vital processes, which supposedly

include oxidation secondarily; removal of most of the adrenal cortex did not decrease the stimulating effect of cold and shows that the cortex probably has no importance in oxidation increase and nothing to do with the "master" reaction for oxidation at the temperatures studied. Bibliography (16 items).

**Copy seen:** DLC.

**25534. RING, GORDON C.** Thyroid stimulation by cold, including the effect of changes in body temperature upon basal metabolism. (American journal of physiology, Feb. 1939. v. 125, p. 244-50)

**Contains** a report based on short and long exposures of rats to cold. Short exposure to cold was followed by elevation of the basal metabolism associated with a rise in body temperature; long exposure to 0°-5° C. brought about an average rise in metabolism of 21 per cent (corrected for changes in body temperature this becomes 16 per cent); this increased metabolism was brought about largely by the thyroid; nervous pathways through the superior cervical ganglia are not essential for cold-stimulation of the thyroid. Bibliography (24 items).

**25570. RINGDAHL, OSCAR, 1885-** . Översikt av de hittills i vårt land funna arterna tillhörande släktena Mydaea R. D. och Helina R. D. (Muscidae). (Entomologisk tidskrift, 1924. Årg. 45, häft. 1, p. 39-48, häft. 2-3, p. 49-66) **Title tr.:** A revision of the species of the genera Mydaea R. D. and Helina R. D. (Muscidae) known from Sweden.

*Contains a critical revision of all known Swedish species of flies of the genera Mydaea and Helina with tables for the determination of the species (male and female) with descriptive notes*

on 12 species of *Mydaea* (one new) and 47 of *Helina*; includes *M. bengtssoni* n. sp. native to Narvik, Norway and Abisko, Swedish Lapland, and at least 22 other species from Lapland.

**Copy seen:** DA; MH-Z.

**25571. RINGDAHL, OSCAR, 1885-** . Översikt av de i Sverige funna arterna av släktet *Atalanta* Meig. (*Clinocera* Meig.) inom fam. Empididae. (Entomologisk tidskrift, 1933. Årg. 54, häft. 3-4, p. 277-82, illus.) **Title tr.:** A revision of the species of the genus *Atalanta* Meig. (*Clinocera* Meig.) fam. Empididae found in Sweden.

**Contains** a critical revision of Swedish species of the genus of dance flies, with a key to the species and an enumeration of 12 species, including *A. lapponica* n. sp. and five other dipters from Swedish Lapland.

**Copy seen:** DA; MH-Z.

**25572. RINGDAHL, OSCAR, 1885-** . Översikt av de i vårt land hittills funna arterna av släktet *Phaonia* R. D. (fam. Muscidae). (Entomologisk tidskrift, 1923. Årg. 44, häft 2, p. 117-40) **Title tr.:** A review of the species of the genus *Phaonia* R. D. hitherto found in our country [Sweden].

**Contains** a table for the determination of Swedish species (males and females) of dipterous genus *Phaonia* and brief descriptive and critical notes on 43 flies, including several species native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**25573. RINGDAHL, OSCAR, 1885-** . Översikt av de svenska Hydrophoruserna. (Entomologisk tidskrift, 1919. Årg. 40, häft. 1, p. 12-17) **Title tr.:** A review of Swedish *Hydrophorus* species.

**Contains** a synopsis of 17 species of the dipterous genus *Hydrophorus*, including a German description of *H. albosignatus* n. sp., found at Gällivare, Swedish Lapland, and 10 other species native to the same region.

**Copy seen:** DA; MH-Z.

**25574. RINGDAHL, OSCAR, 1885-** . Översikt av i Sverige funna *Hylemyia*-arter. (Entomologisk tidskrift, 1933. Årg. 54, häft. 1, p. 1-34) **Title tr.:** A revision of *Hylemyia* species found in Sweden.

**Contains** a table for the determination of male species of the dipterous genus *Hylemyia*, descriptions of 12 new species and of two little known Zetterstedt's species; a list of 104 Swedish *Hylemyia* species, divided into nine groups, with occasional critical notes and data on dis-

tribution; includes five new and many previously described representing northern regions of Sweden.

**Copy seen:** DA; MH-Z.

**25575. RINGDAHL, OSCAR, 1885-** . Översikt av småsläktena inom familjen Muscidae. (Entomologisk tidskrift, 1945. Årg. 66, häft. 3, p. 95-106) **Title tr.:** A review of small genera in the family Muscidae.

**Contains** a review of 40 small genera in dipterous family Muscidae, with brief notes on 95 species, including many native to Swedish Lapland, and a synopsis of subfamilies, genera and amount of species (p. 106).

**Copy seen:** DA; MH-Z.

**25576. RINGDAHL, OSCAR, 1885-** . Översikt av Svenska *Fannia*-arter (Muscidae). (Entomologisk tidskrift, 1934. Årg. 55, häft. 2, p. 105-121, illus.) **Title tr.:** Revision of Swedish *Fannia* species (Muscidae).

**Contains** a critical revision of Swedish *Fannia* species, with keys to four related genera of flies and to the *Fannia* species and descriptive and critical notes on 43 species, including 11 native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**25577. RINGDAHL, OSCAR, 1885-** . Översikt av svenska *Hydrotaea*-arter (Muscidae). (Entomologisk tidskrift, 1925. Årg. 46, häft. 1, p. 7-20) **Title tr.:** A survey of Swedish *Hydrotaea* species (Muscidae).

**Contains** a table for the determination of male and female flies of the gen. *Hydrotaea* and brief descriptions of 26 Swedish species with data on distribution; includes nine species native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**25578. RINGDAHL, OSCAR, 1885-** . Översikt av svenska *Lasiops*-arter (Muscidae). (Entomologisk tidskrift, 1927. Årg. 48, häft. 1, p. 35-44) **Title tr.:** A review of Swedish species of *Lasiops* (Muscidae).

**Contains** a critical revision of Swedish flies of the genus *Lasiops* (Muscidae), with keys (males and females), descriptive notes on 18 species, and data on distribution in Sweden; includes 10 species native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**25579. RINGDAHL, OSCAR, 1885-** . Översikt av svenska *Pegomyia*-arter (Diptera: Muscidae). (Entomologisk tidskrift, 1938. Årg. 59, häft. 3-4, p. 190-213, illus.) **Title tr.:** A revision of

Swedish species of the genus *Pegomyia* (Diptera: Muscidae).

Contains a critical revision of Swedish species of this fly with a table for the determination of subgenera and species and an enumeration of 51 species, including descriptions of three new species (*P. furva*, n. sp. from Abisko, Torne Lappmark) and at least 23 species native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

Description of process used by the U. S. Navy Bureau of Yards and Docks in construction of a radio tower in northern Alaska in 1947. "Four massive concrete footings were placed on permafrost several hundred feet thick as supports for a 200-ton, four-legged tower, in northern Alaska. The base of each foundation was a heavily reinforced concrete slab resting on 9 pilings made of 8-in. well casings 30 ft. long, which were filled with clean, dry sand within 5-ft. of the top

and frozen into the permafrost. The excavation was covered with 1-ft. layer of sand and 4-in. of glass fiber insulation followed by an additional 6-in. layer of sand. Adequate frost protection was provided each concrete pedestal for a maximum period of four days after pouring. Electrical resistance thermometers were used to check thawing of the soil resulting from the heat of hydration of the newly poured concrete. Water which appeared around the foundation was removed by pumps until the temperature at the footings came to equilibrium with the surrounding soil."—SIPRE.

**25594. ROBERTS, PALMER W.** Effects on materials in arctic cold, 1-2. (Military engineer, May/June-Nov./Dec., 1950. v. 42, p. 176-78, 272-73, 366-69, 452-55, illus., diagrs.)

The first part on concrete, ice and water deals with the use of snow, "snowcrete" (snow compacted by natural or artificial means), ice and "icecrete", (a mixture of sand or gravel with ice as cementing agent) for construction. Pt. 2 on wood and metals includes data on strength tests of wood, and physical properties of steel, stainless steel, cast iron, lead, solders, copper and alloys, and aluminum alloys. Pt. 3 on plastics, rubber, glass, fabrics, and leather contains notes on the cold weather use of these materials, and tabular presentation of the resin group with trade names, forms available and uses of nineteen commercial plastics, brief notes on behavior in reduced temperatures of rubber, glass and fabric, and discussion of the Eskimo versus commercial method of tanning leather for cold weather uses. Pt. 4 on fuels, lubricants, engine coolants, explosives, and equipment comprises notes and lists of fuels and lubricants which provide satisfactory service for cold weather, discussion of anti-freezes, comments on testing and handling of explosives, and on care and specifications of equipment (batteries, machines, ropes, and bolts).

**25595. ROBERTSON, ELIZABETH CHANT.** Family allowances in the Canadian Arctic. (Polar record, Jan. 1952. v. 6, no. 43, p. 345-47)

Contains an outline of the administration of Canadian family allowances (\$5. to \$8. per child) among the Eskimo population (approx. 7600); local police (R. C. M. P.) and traders (Hudson's Bay

Co.) registering the children, and defraying the allowances "in kind." Vital statistics, health conditions and distribution of Eskimos is noted. Discussion follows on the adverse effect of "trade goods" on the Eskimo, supplanting his natural, healthier diet and traditional clothing. Steps taken in family allowance administration to offset such ill effects are outlined: guidance and control of purchases in food and clothing (restraining that of flour, promoting milk, pabulum, fruit juices, eggs, oats, vegetables, cheese, beans, etc.); stimulation of native hunting by supply of equipment and suspension of the allowance if it influences the Eskimo to abandon hunting and become a "post" dweller.

Author notes that "during the last few years, the R. C. A. F. photo squadrons have extended their operations northward to photograph virtually all of this previously poorly-mapped part of Canada . . . Many noteworthy changes have appeared in the outline of the coasts of the Arctic Islands". Some of these changes are indicated and earlier mapping and exploration of various islands by Stefansson, Sverdrup, Nares, McClintock, Parry and others, is sketched. The second part of this article deals with the mainland and islands south of 75° N. lat.

**25600. ROBINSON, ROBERT.** Permafrost—arctic building problem. (Constructor, June 1947. v. 29, no. 6, p. 28-32, illus. Reprinted from Federal science progress, May 1947)

Clear, non-technical article, with useful

diagrammatic illustrations, of the ground characteristics, physical processes, and building problems of permafrost. "Permafrost occurs in Alaska, Canada, and Siberia and varies in depth from a few feet to 1400 ft. Permafrost in sub-arctic regions is covered with an active layer of soil subject to seasonal freezes and thaws. A talik layer which rarely freezes is often found between the active layer and the permafrost table. Ground water, talik islands, ice veins and lenses create construction problems by swelling, sinking, seeping, and icing. The basic tactic in construction is the maintenance of the thermal regime between the permafrost and the active layer by insulation. Adequate insulation is attained by providing a gravel mat or an air space between the ground and the structure. Granular soils are chosen for sites whenever possible. Foundation piles are anchored in the permafrost. Research is being conducted by the Army Corps of Engineers in Alaska, at Purdue University, and at the University of Minnesota."—SIPRE.

Narrative of a seven-man expedition during July-Sept. 1938, written by its leader, Roch, and the expedition's doctor. Its aims were: climbing and exploration in the mountains (particularly Mt. Forel) of Schweizerland north of Angmagssalik (ca. 66°30' N. 36° W.), exploration of the inland ice beyond Mt. Forel, to establish its highest point, exploration of the geography, glaciology, topography, mineralogy and snow conditions of the area. The expedition was successfully carried out: the top of Mount Forel (3500 m.) was reached on Aug. 2.; two members of the party went on to the ice-cap where they stayed ten days, reaching a height of 3380 m. (Plateau du Pourquoi-Pas? 67°30' N. 35°50' W.) 60 km. north of Mount Forel.

Appendix (p. 249-51) contains notes on geographical, ethnographic and medical observations.

**25606. RODAHL, KÅRE, 1917-** Arctic nutrition. (Canadian geographical journal, Feb. 1950. v. 40, p. 52-60, illus.)

General discussion of vitamin deficiency diseases among white trappers in Greenland, sources of vitamins in arctic plants and animals, calorie consumption and diets of trappers and Eskimos, based on the author's observations in 1939-40 while with the Swedish-Norwegian Expedition in Northeast Greenland.

**Copy seen:** DGS; DLC.

**25607. RODAHL, KÅRE, 1917-** Ark-tiske kostproblemer. (Polarboken, 1949, p. 87-90) **Title tr.:** Arctic nutrition problems.

Diseases due to malnutrition are almost unknown among the Eskimos, because they eat certain arctic plants and animal organs which have a high C-vitamin content. The fare consumed by Europeans in the Arctic is usually deficient in both A and C vitamins. The entire crew of a Norwegian ship that passed the winter of 1937 in Greenland suffered from a lack of A vitamins. A more rational diet largely based on the internal organs of certain arctic animals and on dried vegetables of high quality is recommended.

**25608. RODAHL, KÅRE, 1917-** Basal metabolism of the Eskimo. (Federation proceedings, Mar. 1952. v. 11, no. 1, p. 130)

Contains abstract of report on BMR (Basal metabolic rate) tests on 73 Eskimos from four different localities in Alaska. Environmental observations, body surface measurements, data on food consumption and elimination of urinary nitrogen are included. In accordance with earlier reports, the BMR of Eskimos living in their native habitat was significantly higher than in Whites. When given the white man's diet, the average BMR was reduced to a level identical to a group of Whites living

under the same conditions. It is concluded that there is no racial difference between Eskimos and Whites in the basal heat production and that the specific dynamic action of protein in which their diet is rich is responsible in the higher BMR of the Eskimos. **Copy seen:** DSG.

**25609. RODAHL, KÅRE, 1917-** . Hypervitaminosis A, a study of the effect of excess of vitamin A in experimental animals. Oslo, J. Dybwad, 1950. 4 p. l., [7]-206 p., 1 l., 24 plates, tables, diagrs.

*Contains* an introduction on hypervitaminosis A in man and animals; statement of the problem, plan and methods of the investigation; studies on hypervitaminosis A in rats, mice, guinea pigs, rabbits and cockerels. Conclusions: excess of vitamin A was toxic to all the animals used in the investigation, though there were some differences, largely of degree, depending on the method of administration. The symptomatology is given and showed an "acute intoxication" which followed directly the administration of the first toxic dose and a "chronic intoxication" manifest for several days after continuous administration of the vitamin. Results of examination of the blood and urine; x-ray microscopical and other analyses are also given. The relation of hypervitaminosis A to skin and organ lesions, and to the action of other vitamins is also discussed. Bibliography (76 items).

Reviewed in *Arctic*, May 1951. v. 4, no. 1, p. 62-64.

**Copy seen:** DGS; DLC.

**25610. RODAHL, KÅRE, 1917-** . Hypervitaminosis A and scurvy. (*Nature*, 1949. v. 164, p. 531)

Extending previous investigations, the author studied hypervitaminosis A in rats, mice, guinea pigs, rabbits, dogs and chickens. The symptoms of intoxication, following the ingestion of 50-100 I. U. vitamin A/gm. body-weight are described. Those of the symptoms as well as post-mortem, microscopical and other findings, identical with those observed in human scurvy, are discussed in detail. The effects of Vitamin A excess and those of ascorbic diet were very similar in guinea pigs. These and some additional experiments indicate that prolonged administration of excess vitamin A produces in laboratory animals a condition resembling scurvy. Abnormality in vitamin C metabolism, found in the majority of cases of sick animals, is not considered

as the sole cause in hypervitaminosis A. Bibliography (4 items).

**25612. RODAHL, KÅRE, 1917-** . Hypervitaminosis A in the rat. (*Journal of nutrition*, July 1950. v. 41, no. 3, p. 399-421, 3 plates)

*Contains* report on an extension of the author's *Toxic effect of polar bear liver*, 1949 (see *Arctic Bibliography*, No. 14749). Prolonged administration of excess vitamin A in toxic doses was necessary to produce changes characterized as hypervitaminosis A. The toxicity of various doses is discussed. Oral administration produced identical symptoms as subcutaneous injection and no significant effect of age or sex was observed. A detailed account of the symptoms of vitamin A hypervitaminosis is included, together with the results of blood, x-ray, microscopic and other examinations. Bibliography (33 items). **Copy seen:** DLC.

**25613. RODAHL, KÅRE, 1917-** . Nytt land under vingene. Oslo, Gyldendal Norsk Forlag, 1948. 149 p., 34 plates (incl. 1 map), fold. map. *Title tr.*: New land under wings.

Narrative of the first year's (reconnaissance and depot-laying) work of the Danish Peary Land Expedition, 1947-50, on which the author was physician and biochemist. Tells of the organization, personnel, flights from the base on Young Sund to the Independence Fiord region, the broad scientific program in general, mentioning preliminary results especially in archeology, glaciology and zoology, from a 17-day sojourn at Jørgen Brøn-lunds Fjord. Includes chapters on Ebbe

Munck and Eigil Knuth, co-leaders of the expedition (see *Polar record*, Jan.-July 1948, v. 5 (no. 35-36) p. 201-202).

Contains an account of a severe local infection (cellulitis) common among sealers, especially those handling the blubber (spekk) or skins. Its occurrence and distribution, symptoms, cause (not as yet established, but probably *Erysipelothrix rhusiopathiae*), treatment, including latest experiment with antibiotics are discussed. Description of a case is given, and measures of prevention indicated. Bibliography (11 items).

**Copy seen:** DLC.

**25615. RODAHL, KÅRE, 1917- .** Toxicity of polar bear liver. (Nature, 1949. v. 164, p. 530-31)

Author and Moore established earlier the very high vitamin A content of polar-bear and bearded seal livers and concluded that their toxic effect may be due to this high content. Attempts to fractionate liver into toxic and non-toxic constituents were unsuccessful. In the present study with rats, ingestion of 0.5-0.6 gm. of bear liver daily proved toxic in all cases; in two cases 0.5-0.7 gm. daily were lethal. Liver freed from vitamin A was non-toxic. Bear-liver oil containing all its vitamin A, and purified concentrates of this vitamin were toxic; equivalent amounts of bear-liver oil freed of vitamin A had no bad effects. Symptoms increased with increasing amounts of vitamin A. It is thus confirmed that the toxic substance in polar bear liver is identical with vitamin A. Livers of snow hare and walrus, considered non-poisonous by the Eskimos, contain very small amounts of vitamin A.

**25617. RODAHL, KÅRE, 1917- , and A. W. DAVIES.** Vitamin A in seals. (Biochemical journal 1949. v. 45, no. 4, p. 408-412, tables)

Contains report on weight, fat content

and vitamin A content of the livers of 64 hooded seals (*Cystophora cristata*), 145 Greenland seals (*Phoca groenlandica*), one Atlantic seal (*Halichoerus grypus*), and 2 common seals (*Phoca vitulina*). During the breeding season (March to late May) a very high concentration of vitamin A was found in mature specimens of the hooded and Greenland seal from northern waters. The vitamin A content of the single Atlantic seal fell within the same range, but those of the two young specimens of common seals were much lower. In mature specimens there was no correlation apparent between liver vitamin A content and age, sex, or thickness of blubber. Some other tissues examined, showed relatively small amounts of vitamin A. The fat content of the livers of all species was high in the very young (8-10 per cent), but low (2-4 per cent) in mature animals. Bibliography (4 items).

**25627. ROGERS, HARVEY G.** Report on investigation of sanitary features of

utilidor construction and substitutes therefor in Arctic installations, for the Subcommittee on Waste Disposal. (National Research Council. Committee on Sanitary Engineering and Environment. Bulletin, 1949, p. 111-15)

Contains description of various types of utilidor, an insulated, heatable conduit, which provides extra protection for utility distribution systems, required by the extreme polar weather.

"The basic type of utilidor for use in arctic regions is the tunnel type. The tendency has been to put as many as possible of the utilities together. The advantages of the basic utilidor are ease of inspection and repair, of communication between buildings, and of installation and operation of heating systems. The disadvantages of this heavy unit construction include high initial costs, the hazards of total failure of the utilities, and possible foundation failure due to changes in the soil. Attempts to modify the design by reduction in size and weight have increased the sanitary hazards. Separate water supply systems are operating in Canadian and Siberian communities by circulating preheated water through pipe lines. Separate water-carriage sewer systems have not been used extensively in the Arctic. The experience with the Fairbanks sewer system has led to recommendations for designs minimizing sanitary hazards, for separate water and sewer installations, and for adequate designs for the various related appurtenances."—SIPRE.

**25628. ROGERS, HARVEY G.** Report on investigation of the design of sewage pumping stations for low temperature areas, for the Subcommittee on Waste Disposal. (National Research Council. Committee on Sanitary Engineering and Environment. Bulletin, 1950. p. 317-22, illus.)

Contains sections on the present conventional types of sewage pumping stations in Canada and Alaska and their inadequacy for arctic conditions. Types of lift stations now in use in continental United States are described and of the merits of various types discussed, noting problems associated with the use of these types in northern U. S. and in arctic areas. Recommendations include adaptations of conventional types for permafrost conditions; of single-chamber types using storage units inside the structure

and of types which do not require removal of screening in the pump station.

**25645. ROSBERG, J. E.** Begleitworte zu einer neuen Karte von Finland. Helsingfors, 1907. 2 p., fold map. (Geografiska föreningen i Finland. Meddelanden, 1904-1906. Bd. 7, no. 5) **Title tr.:** Notes to a new map of Finland.

*Contains* an historical sketch of previous mapping of Finland and an explanation of the base for the map by the author and H. H. Hagman reproduced here (1:2 million).

**Copy seen:** DLC.

**25646. ROSBERG, J. E., and J. A. PALMÉN.** Finland och Adolf Nordenskiölds minne. Helsingfors, 1902-1903. 16 p. (Fennia, v. 19, no. 4) **Title tr.:** Finland and Adolph Nordenskiöld's memory.

*Contains* biographical sketch of N.E.A. Nordenskiöld, 1832-1901, his activities as geologist, explorer, and book collector of geographical literature; the acquisition of his collection by the Finnish government and transfer of part to the University of Helsinki.

**Copy seen:** DLC.

**25647. ROSBERG, J. E.** Luonnoksia maantieteellisiin problemeihin, II. Pysyvistä routamaasta. (Terra, 1912. 24, p. 139-46) **Title tr.:** Natural geograph-

ical problems, II. Permanently frozen ground.

Author summarizes several previous studies on permafrost abroad and on permafrost in swamps in Finland; also extends his own remarks (published in his *Lappi* 1911) on permafrost and "palsa" (frozen peat mounds). He suggests further study on the forming of "palsa," and on the effect of erosion, vegetation and soil type on permafrost; also suggests mapping of permafrost areas to determine their changes in limits and depth. Author notes that ground occasionally, but not usually remains frozen through the summer in southern Lapland.

**25650. ROSBERG, J. E.** Nordöstra Sodankylä. (Terra, 1891. v. 3, no. 1-2, p. 1-51, incl. illus., fold. map) *Title tr.*: Northeastern Sodankylä.

A geologist's account of an expedition made in the summer of 1890 to a then little known region of Lapland northeast of Mutenia and Riesto (approximately 68°20' N. 28° E.). A map of the region covering 2400 km<sup>2</sup> was made. Of especial interest to the author were the Raututunturi Mts. and the Saariselkä Mts. near the then Russian border, with their numerous large granite blocks. Orographical, hydrographical and geological information is presented. The animal and plant life of the region was studied by R. Hult. A chapter is devoted to the Lapp population of the region.

**25655. ROSE, DONALD CHARLES, 1901-** . The sudden increase in cosmic ray intensity, November 19, 1949. (Canadian journal of physics, May 1951. v. 29, no. 3, p. 227-35, 4 fig., table)

"The cosmic ray counter telescopes set up at Ottawa and Resolute [Cornwallis Island] Canada are described. The sudden increase in intensity of cosmic rays at Ottawa reached a maximum of 70 per cent above normal in a few minutes and decayed slowly to normal in about four hours. At Resolute the increase was gradual and attained only an increase of 20 per cent above normal; the return took about three hours. It is concluded that the cosmic rays causing the main increase in intensity strike the earth in a narrow cone, which in the Northern Hemisphere crosses North America but does not strike Europe. The smaller effect at Resolute may be explained as the result of a weaker cone or a penumbra effect."—*Meteorological abstracts and bibliography*, Aug. 1952. v. 3, no. 8, p. 812-13. Bibliography (11 items). *Copy seen:* DLC; DWB.

**ROSE, E. R.**, see Caley, J. F., & others. E. Canada (Possible future petroleum provinces). 1951. No. 21085.

**25656. ROSENFELD, LEON**, and others. Circulation of the blood and lymph in frostbite and influence of therapeutic cold and warmth; an experimental study. (Archives of surgery, Nov. 1949. v. 59, p. 1045-1055, 3 charts) Other authors: L. J. Langohr, C. R. Owen, and O. Cope.

Contains a study on dogs, with a foot submitted to various degrees of severe frostbite; the blood and lymph flow during freezing and thawing were followed and compared with each other and protein concentration correlated with the pathological changes. Effects of cold (10° C.) and warmth (40° C.), used as therapy against abnormal blood and lymph flow and edema, were also studied; blood flow remained the same in treated and untreated animals but lymph-flow and protein concentration increased more promptly than in untreated controls and much more so than in cold treated feet.

**25661. ROSS, H. N.** Pre-war experiences of food storage in Spitsbergen. (Polar record, July 1952. v. 6, no. 44, p. 512-13, tables)

Contains information based on 30 years' experience of a mining engineer at Longyearbyen in storage of meat and fish (in mines, tunnels and cold storage) of vegetables, fruit and tinned food (at 2° to 4° C., flour, cereals, etc.). The data are summarized in a table.

Copy seen: CaMAI; DLC.

**25662. ROSS, J. E. R.** Northern activities of the Geodetic Survey 1950-1. (Arctic circular, Jan. 1952. v. 5, no. 1, p. 5-8)

Contains accounts by the Dominion Geodest of previous work of the Survey in the North and note of previous reports in Arctic circular. Report on 1950-51 activities in the Yukon and Northwest Territories describes three types of geodetic work: shoran trilateration, precise astronomical surveys and precise levelling.

"The shoran trilateration consisted of the projection, with the cooperation of the R. C. A. F., of an arc of triangulation from central Canada north and north-westerly as far as the arctic coast. This new system of survey permits the extension of ground control for mapping and

charting into remote areas in a much shorter time than would be required by the use of the conventional type of triangulation. While not yet attaining the degree of accuracy of the first-order triangulation, shoran is able to place the relative positions of isolated points more accurately than by astronomic means. . . . Fortunately, neither wind, darkness, rain, nor clouds interfere seriously with this type of distance-measurement operation." Field personnel and localities for each type of work is given and continuance indicated. G. F. Hattersley-Smyth's obtaining astronomical fixations at four points in Beaufort Sea on the 1951 expedition of D. R. B. vessel *Cancolim II* is noted.

**Copy seen:** DLC.

**25663. ROSS, J. E. R.** Shoran operations in Canada. (Surveying and mapping, Oct.-Dec. 1952. v. 12, no. 4, p. 363-70, tables, map)

*Contains* an account by the Dominion Geodesist, of surveying and mapping operations with shoran from their beginning in 1947. During 1949-51 the shoran net was advanced from 49° N. lat. northward throughout Manitoba and Saskatchewan, down the Mackenzie basin to the arctic coast at 70° N. lat. In this net 40 shoran stations were established; also 13 stations were prepared in a 1200 mile belt extending from Great Bear Lake eastward to Hudson Strait. Triangulation control (limited) in the northern areas is indicated. The basic operations of a shoran-geodetic survey are described and the shoran project to complete in three more seasons, a huge arc, of about 5500 miles axial length, with connections to five geodetic bases from existing first-order triangulation. Method of line crossing and length measurement is described with results for the line Fort Simpson-Peace. Field analysis accuracy obtained, limitation of present equipment, and application to mapping, are discussed.

**Copy seen:** DLC.

**25664. ROSS, P. H.** Haymaking at Kenai experiment station. College, 1907. 13 p. plate (Alaska. Agricultural Experiment Stations. Bulletin no. 3)

*Contains* report and recommendations based on experiments conducted during 1905 and 1906. Includes a general outline of weather conditions during hay making; accounts of implements and curing qualities of native oat hay; the experiments of 1905-1906; conclusions and summary.

**25666. ROSSMANN, FRITZ.** Über den Föhn auf Spitzbergen und Grönland. (Zeitschrift für Meteorologie, Sept. 1950. Bd. 4, no. 9, p. 257-62. Also pub.: Polarforschung, 1950, pub. 1951. Bd. 2, Jahrg. 20, p. 347-53) **Title tr.:** On the foehn of Spitzbergen and Greenland.

*Introductory* remarks on the author's theory of foehn winds, and an analysis of the behavior and nature of the winds which blow from nearby mountains down the valleys and fiords of West Spitzbergen and West Greenland. "Föhn is attributed to an air current descending from a föhn-wall cloud cooled by evaporation of scattered droplets. The so-called föhn of Spitzbergen, shown by kite ascents to be only a few hundred meters deep, warms adiabatically and is not a true föhn. It is a local wind blowing off north slopes in Sept.-May; sea breezes prevail on S. slopes in summer. In Greenland, valley föhn often occurs on the steep slopes of the inland ice, with moist adiabatic warming due to drift snow blown off the inland ice."—*Meteorological abstracts and bibliography*, June 1951. v. 2, no. 6, p. 437. Bibliography (12 items).

**25669. ROTH, GRACE M., and others.** The relative roles of the extremities in the dissipation of heat from the human body under various environmental temperatures and relative humidities. (American journal of physiology, Mar. 1940. v. 128, p. 782-90, 3 fig.) *Other authors:* B. T. Horton and C. Sheard.

*Contains a study on two normal subjects (in the basal metabolic state, lightly clothed and at rest in still air) exposed to fixed environmental temperatures of 23°-28°C. and a wide range of relative humidity (35-75 percent). Relative humidity was found to have little effect on the skin temperature of the body; heat dissipation from the body was similarly little influenced by humidity and was chiefly dependent on the environmental temperature. Bibliography (15 items).*

**Copy seen:** DLC.

**25670. ROTH, GRACE M., and M. A. GABRIELSON.** Variation in the concentration of acids of the gastric content in normal subjects before and following immersion of hand and entire body in water at various temperatures. (American journal of physiology, Nov. 1940. v. 131, p. 195-99)

*Contains report on a study which demonstrated that when the hand of the subjects was immersed in water of 10° C. there was only a slight increase in gastric acidity during, and fifteen minutes after immersion; immersion up to the neck in water, ranging from 18.3° to 29.4°C. caused a marked rise in gastric acidity, especially 15 minutes after the bath; similar experiments at 32° to 42.2° C. caused a slight rise of acidity in three subjects and a marked fall in the other two. Additional experiments suggest that*

*the rise in gastric acidity is due to release of histamine or a histamine-like substance. Bibliography (4 items).*

**Copy seen:** DLC.

**25671. ROTH, JAMES L. A., and J. A. FRANTZ.** Metabolic balances in the cold environment, 1. Nitrogen and water exchanges. (Federation proceedings, Mar. 1948. v. 7, p. 105)

*Contains an abstract of studies on the influence of a U. S. A. F. emergency ration and restricted water intake on the nitrogen, water and energy exchanges of subjects living for nine days in an environment of -32° C. The relation and requirements of water intake to the diet and during fasting are also studied.*

**25677. ROUSSEAU, JACQUES, 1905-** . Atroverso il Quebec artico. (Le vie del

mondo, Feb. 1952. Anno 14, no. 2, p. 143-54, illus. map) **Title tr.:** Across arctic Quebec.

A popular account of a journey on foot and by canoe in the summer of 1948 across Ungava Peninsula from Povungnituk on Hudson Bay (60° N. 78° W.) to Payne Bay (60°2' N. 70°2' W.) on Ungava Bay. The party consisted of 10 men (4 scientists, 4 Indians and 2 Eskimos). The first stage of the journey was up the Kogaluk River from mouth to source (about 150 km.). Trails found along the banks had evidently been made by the caribou herds formerly abounding in the region. This was followed by a four-day trip across tundra. Short cold nights alternated with hot days with temperatures up to 31° C. The rivers here are fed by the surface layer of the ice which lies only 50 cm. beneath the lichen vegetation. Two species of trout were found in great abundance in the rivers: red and lake trout. The party took 2½ days to cross Payne Lake (59°25' N. 74° W.), which is 100 km. long and 25 km. wide. The author called this body of water Lake Saint-Exupéry in memory of his friend, the writer Antoine de Saint-Exupéry. The ruins of an abandoned Eskimo settlement were found near the western tip of the lake. The final stage of the expedition was a trip down Payne River to Payne Bay, a distance of 250 km. Eight photographs illustrate the terrain and Eskimo inhabitants of the region.

**Copy seen:** CaMAI.

**25678. ROUSSEAU, JACQUES, 1905-** . Basic principles for the protection of the barren ground caribou and reindeer breeding in Quebec. (Province of Quebec Association for the Protection of Fish & Game. Annual report 92, May 1951, p. 28-35; text also in French section, p. 28-35)

*Contains* brief statement of the climatic zones of northern Quebec, followed by estimate of the caribou population, remarks on causes of its decline and an outline of recommendations for its protection, including legislative, biological and educational means. Bibliography (6 items).

**Copy seen:** CaMAI.

**25679. ROUSSEAU, JACQUES, 1905-** . By canoe across the Ungava Peninsula via the Kogaluk and Payne Rivers. (Arctic, Autumn 1948. v. 1, no. 2, p. 133-35)

*Contains* report on author's plan to make phytogeographic investigations in

the interior of Ungava Peninsula and northern Quebec in general, as hitherto unexplored areas, to contribute new data in relation to M. L. Fernald's hypothesis of persistence of plants in unglaciated areas in northeastern North America. Three different areas were studied: (1) subarctic forests in the limestone area of Lake Mistassini, 1944-47; (2) survey of George River, summer 1947; (3) a sector of Ungava Peninsula north of the timber line between Hudson Bay and Ungava Bay via the Kogaluk and Payne Rivers in summer 1948. The present report gives preliminary account of the 1948 trip: the four-man party with Eskimo and Indian guides, the route, wild life observed, etc. The two rivers are briefly characterized.

(Revue canadienne de géographie, 1949. v. 3, no. 1-4, p. 43-51, 6 illus.; also issued as Montreal. Botanical Garden, Memoir, no. 10) **Title tr.:** Modifications of the surface layer of the tundra by climatic factors.

**Contains** note of observations made in the course of two traverses of Ungava Peninsula in 1947 and 1948, of some surface phenomena of tundra soils caused by climatic, especially temperature factors. Solifluction, reticulated or polygonal ground, tundra ostioles or soil circles, ochrous hollows, lichenous polygons, are described, particularly in regard to vegetation if present and illustrated from photographs. **Copy seen:** CaMAI.

**25687. ROUSSEAU, JACQUES, 1905-** , and M. PANISSET. Notes sur quelques lichens antibiotiques de la province de Québec; aspect écologique et phytogéographique; aspect microbiologique. (Revue canadienne de biologie, May 1951. v. 10, no. 2, p. 181-82) **Title tr.:** Notes on some antibiotic lichens of Quebec province; ecological and phytogeographic aspect; microbiological aspect.

**Contains** a note by the senior author on the common lichens of the Canadian tundra, and their economic and therapeutic significance. The second note, by Panisset deals with antibiotic and, especially, tuberculostatic properties of alcohol-ether extracts of three species of lichens collected by Dr. Rousseau in northern Quebec. **Copy seen:** CaMAI.

**25688. ROUSSEAU, JACQUES, 1905-** , and MARCEL RAYMOND. Quelques entités nouvelles du nord du Québec. (Naturaliste canadien, Feb. 1952. v. 79,

no. 2, p. 81-84, illus.) **Title tr.:** Some new entities from northern Quebec.

**Contains** a description of five new forms, variations or combinations of plants from the Ungava region; localities, substrates, etc. are considered. **Copy seen:** DA.

**25689. ROUSSEAU, JACQUES, 1905-** . Toundra. (Liaison, Jan. 1950. v. 4, no. 31, p. 31-35) **Title tr.:** The tundra.

**Contains** a sketch of the tundra giving its main characteristics: a treeless, unpeopled arctic desert, with little sun, few plants and poor life in general.

**Copy seen:** CaMAI.

**25690. ROUSSEAU, JACQUES, 1905-** . L'Ungava, sort de sa léthargie. (Grolier Society Ltd. Le livre de l'année 1950. Montreal, 1950. p. 118-22, illus.; also pub. in: L'almanach du peuple, 1951. Montreal, 1950. p. 399-409, 2 illus.) **Title tr.:** Ungava, rising from its lethargy.

**Contains** a popular article on the part of Quebec province north of 53° N. lat. traditionally known as "Ungava" (and to be distinguished from Ungava Peninsula, east of Ungava Bay), after 1912 called "New Quebec," and now Northern Quebec; its area, history, geography, exploration, population, and resources and possibilities for its commercial exploitation. **Copy seen:** CaMAI.

**25691. ROUSSEAU, JACQUES, 1905-** . Les voyages du Père Albanel au lac Mistassini et à la Baie James. (Revue d'histoire de l'Amerique française, Mar. 1950. v. 3, p. 556-86)

**Contains** an account of the life of Charles Albanel, 1616-1696? Jesuit missionary among Canadian Indians, particularly his overland trip (the first by a white man) from Quebec by Lakes St. John and Mistassini to Rupert River mouth on James Bay in 1670-71, and his second trip in 1673-74 when he was captured by the British. Dr. Rousseau analyses the published and mss. sources of information on these trips and discusses the geographic problems involved. Bibliographical footnotes. **Copy seen:** CaMAI.

**25692. ROUSSEAU, JACQUES, 1905-** . La zone hémiaïarctique. (Royal Society of Canada. Proceedings, 1949. ser. 4, v. 43, appendix F, p. 246, sec. 5, no. 17)

**Contains** abstract of paper: on basis of explorations in northern Quebec in

1940 and 1942 and data from other botanists, author describes a 200-mile zone intermediate between arctic and subarctic, 60-90 per cent, and generally at least 80 per cent arctic. It is characterized by patches of arctic tundra and in valley bottoms by small strips of subarctic forest. For this region he proposes the name: hemiarctic zone.

**25697. ROWLEY, DIANA.** Stefansson Island. (Arctic circular, Oct. 1952. v. 5, no. 5, p. 44-53, 2 sketch maps)

*Contains* account of an island off the northeast peninsula of Victoria Island (at approx. 73°10' N. 105° W., area 2,000 sq. miles), on the basis of air photographs (1947, 1948) and the unpublished report and diary of Storker T. Storkerson, who sighted the island in June 1917 while on the Canadian Arctic Expedition 1913-1918, led by Vilhjalmur Stefansson. Previous explorations (1851, 1905, 1915) of the Victoria Island coast are noted, and Storkerson's journey to survey the northeastmost part traced in detail. His sighting and naming of Kilian, Elvira (later termed Elvira) and Leffingwell (now Stefansson) Islands, is discussed; also names of coastal features in the region, and of the strait between Victoria and Stefansson Islands, now known as Goldsmith Channel. Eskimos' knowledge of Stefansson Island as Umingmaliik (place of musk ox) is noted.

"A treatise on ground frost problems based on field observations, laboratory results, and construction methods is presented. A mathematical treatment of the behavior of frozen soils is made. Temperature distribution in soils and the measurement of temperature are included. Various frost phenomena theories including the crystallization, capillary, and cohesion strength theories are compared and critically analyzed. A new theory of frost lens formation is formulated. An analysis is made of frost action under cold storage structures. Construction methods for preventing frost damages are described."—SIPRE.

**25722. RUSSELL, SCOTT.** The effects of arctic and high mountain climates on the carbohydrate content of *Oxyria digyna*. (Journal of ecology, 1948. v. 36, p. 91-95, tables)

Report on work conducted in 1938 on Jan Mayen Island at sea level and in 1939 at Karakorum, Himalaya, at 12,500

ft. altitude to establish the effect of cold and daylight on plant growth. The low mean-temperature and short growing season, are common to both regions, while the light conditions differ sharply. A comparison of mature leaves of *Oxyria digyna* growing in the two places showed "a surprising similarity with regard to total carbohydrate content, the ratio of reducing sugar to total sugar and the range of diurnal variation." The growth rates too were not greatly different. Exposure to continuous daylight in the Arctic had no special effect. Bibliography (6 items). **Copy seen:** DA.

**25768. SAGER, R. C.** Aerial analysis of permanently frozen ground. (Photogrammetric engineering, Sept. 1951. v. 17, p. 551-71, illus., map, diags.)

"Photographs of permafrost terrain features, particularly polygon formations, are analyzed and interpreted. Soil polygons occur in arctic and many sub-arctic areas having sufficient soil. They are visible at scales of 1/50,000 and larger and have diameters ranging from a few to over 600 ft. The number of sides of the level polygon is indicative of the climate, with fewer sides and larger areas in the

north than in the south. A rectangular polygon indicates a sloping terrain; a square polygon suggests areas modified by a marine climate. The nature of the perimetric trough indicates trafficability and ice and moisture content of the soil. The core implies the soil type. Relic polygons, distinguishable through a dryer type of sub-arctic vegetation, indicates a lowering of the permafrost table and replacement of the ice by silt, clay, and gravel. The *channel* type and the *depressed center* type, the two most common in the Arctic, are described in detail. Related terrain features most easily discernible from aerial photographs, including peat mounds ["palsa"], cave-in lakes, drunken forests, soil creep, pingos, rectangular and beaded streams, vegetation, thermokarst, dry valleys, asymmetric valleys, tilted sand terraces, and minor superficial folds are briefly discussed."—SIPRE. Bibliographic footnotes (14 items).

Based on studies and materials of the Alaska Insect Project, 1948, when eight species were collected near Fairbanks and Anchorage. List is given of the 18 species known to occur in Alaska, with distribution for each. Bibliography (3 items).

**Copy seen:** DSI-M.

**25779. SAILER, REECE IVAN, 1915-**. Concerning a recent paper on the insects and related arthropods of arctic Alaska. (Ecology, Oct. 1951. v. 32, no. 4, p. 729-30)

Contains a comment on Neal A. Weber's *A survey of the insects and related arthropods of arctic Alaska*, part 1, q. v. The inclusion of non-Alaskan material, the omission of recorded material and omissions in general are criticized. It is suggested that only the lists of insects and other arthropods actually collected by Weber are acceptable.

"The permafrost distribution in the vicinity of Ust'-Yenisey port was studied through a literature survey and by field investigations in conjunction with a search for oil. Frost, peat, and other types of mounds are described in terms of the

mechanism of formation, distribution patterns, and the periods of greatest activity. Compact crystalline ice at a depth of 25 m. was found in drill holes in the Ust' Port valley. Several layers of ice lenses ranging to 4 m. in thickness were discovered at depths between 28 to 43 m. An ice layer, 15 m. thick and 2 km. long, was found to the NE of Ust' Port. Permafrost was present in test hole No. 3 on the left bank of Yenisey at a depth of 270 m., with temperatures varying between  $-5^{\circ}$  and  $-6^{\circ}$  C. on the upper permafrost horizons. Electric resistivity methods indicated permafrost layers from 400 to 500 m. thick along the Yenisey plateau, and from 250 to 300 m. in thickness on well drained terraces. Calculations show that the Yenisey permafrost is aggradating at a rate of 100 m/3000 to 4000 years."—SIPRE. Bibliography (10 items).

This item was previously listed in *Arctic Bibliography*, No. 15199.

**25785. SAKS, V. N.** O mezozoiskoi istorii v bassejnakh Kolymy i Indigirki. (Sovetskaja geologija, Sept. 1940. no. 9, p. 79-91, maps) **Title tr.:** On Mesozoic history in the basins of the Kolyma and Indigirka.

Contains an account of studies conducted in 1936-37 on the middle course of the Kolyma and Indigirka and the surrounding plains, where Mesozoic deposits are most fully represented. The Upper Paleozoic, the Triassic, Jurassic and Cretaceous formations are dealt with in detail (deposits, fossils, tectonics, etc.). Seven phases, punctured by marine-transgressions, are claimed to have occurred during the Mesozoic epoch in the Chukotsko-Verkhoyansk geosyncline. These marine transgressions were limited and all came from the North, suggesting that already in the early Paleozoic a marine basin existed in the area of the present Arctic Ocean. Bibliography (13 items).

**25789. SALMINEN, ANTTI.** Suomen todellisen rantaviivan pituudesta ja kivilajijäineksen kulumisesta rannikolla. (Terra, 1936. 48:2, p. 49-59, map) **Title tr.:** On the actual length of the shoreline in Finland and on the wearing on the beaches.

Author sets forth results of some investigations on the wearing of rock material on beaches; calculates wearing of stones per 100 speed-hours of on-shore winds, and determines diminution in weight of stones on beaches during six ice-free months. As the total amount of wearing depends on length of shore line, author calculates (from maps) length of seacoast and lakeshore lines at ten localities (including Petsamo) and indicates total length of shoreline to be four times circumference of the globe. He suggests that younger Finnish clays originated from wearing of rock material on shores. Summary in English. **Copy seen:** DLC.

Årg. 41, hefte 2, p. 143-45) **Title tr.:** The geographical variation in the European whimbrels (*Numenius phaeopus* (L.)). (From Zoological Museum, 7).

Contains a study of the variation in wing length of the European whimbrel, based on material in the Zoological Museum at Copenhagen, including some north Scandinavian and Greenland specimens (see table 1, p. 144). Summary in English. **Copy seen:** MH-Z.

**25799. SALOMONSEN, FINN, 1909-** . Grønlandsfugle: The birds of Greenland, with illustrations by Gitz-Johansen. Copenhagen, Ejnar Munksgaard, 1950-1951. 3 v.: 608 p., illus., 52 col. plates, fold map. Basic work, text in Danish and English.

Contains in pt. 1 (p. 1-158) brief introductory chapter on ornithological history and zoogeography of Greenland; systematic list (with available data on taxonomy, migrations, habitat preferences, food, plumage, behavior) covering loons, shearwaters, petrels, swans, ducks, geese, and cormorants. Pt. 2 (p. 159-348) continues systematic treatment, dealing with ptarmigan, plover, sandpipers, phalaropes, jaegers, gulls and terns. Pt. 3 (p. 349-608) concludes the systematic list with auks, hawks, owls, ravens, finches, buntings, pipits, etc. A nominal list of 224 birds occurring in Greenland as casual visitors only, is added, as well as a bibliography (about 600 items) and index of Latin, Danish, English and Eskimo bird names. Col. plates are reproductions of water-color paintings in a free interpretive style. Reviewed by T. M. Shortt in *Arctic*, Dec. 1951, v. 4, no. 3, p. 218-19, and Dec. 1952, v. 5, no. 4, p. 251.

**25827. SANDFORD, KENNETH STUART, 1899-** . Observations on the geology of the northern part of North-East Land (Spitsbergen). (Geological Society of London. Quarterly journal, Oct. 1950. v. 105, p. 461-93, illus. (incl. 5 sketch maps), 5 plates)

On the basis of observations during the Oxford expedition of 1924 (of which the author was a member) that of 1935-36 under A. R. Glen, and the published reports of the Swedish-Norwegian Arctic Expedition of 1931, the author gives an outline of the geology of the island and detailed description of the area between 80°-80°30' N. 20°-28° E.; its granite and gneiss, Hecla Hoek Formation and structure. Bibliography (40 items).

**25828. SANDMAN, J. ALB.** Några ord om vegetationen på Ounastunturi. (Geografiska föreningen i Finland. Meddelanden, 1892-1893. Bd. 1, p. 19-37)

**Title tr.:** The vegetation of Ounastunturi.

Contains a topographical, geological and hydrological description of the Ounastunturi mountain (68°10'–68°20' N. 23°40' E.). The occurrence of spruce and pine groups is indicated and the extent of birch forests (which form here the sub-alpine region) is outlined. The greatest part of the mountain however, belongs to the alpine plant region. An analysis of its plant components is presented together with a description of the soil, water conditions, etc., of the diverse plant areas. Summary in German.

Contains an account of the Russo-Finnish winter campaign 1939–40, with descriptions of night fighting, encounter with tanks, air raids, Russian prisoners, etc.

**Copy seen:** DLC.

**25835. SARAUF, GEORG FREDERIK LUDVIG, 1862–**. Das Rentier in Europa zu den Zeiten Alexanders und Caesars. København, B. Lunos bogtrykkeri, 1913. 34 p. "Saertryk af

Mindeskript for Japetus Steenstrup." no. 11. **Titles tr.:** The reindeer in Europe at the time of Alexander and Caesar. (Offprint from Memorial to Japetus Steenstrup, no. 11)

**Contains** a tribute to Japetus Steenstrup, 1812-1897, as an explorer of the prehistoric animal world, and the author's contribution to the early history of reindeer. On the basis of a description going back to Aristotle, the author believes that the Greeks had some knowledge of reindeer; a less clear passage in Caesar leads to similar conclusions about the Romans. An attempt is made to reconstruct the geographic distribution of the reindeer in Greek and Roman times.

**Contains** a critical revision of northern species of this group, with a morphological sketch and data on its systematic position. Diagnoses are presented of 25 species (15 described as new) including nine native to Lofoten Islands region, with critical notes and notes on distribution.

**Copy seen:** DLC; MH-Z.

**25844. SARS, GEORG OSSIAN, 1837-1927.** Om individuelle variationer hos rørhvalerne og de deraf betingede uligheder i den ydre og indre bygning. (Norske videnskaps-akademi Oslo. Forhandling, 1868, pub. 1869, p. 31-74, 2 tables) **Title tr.:** Individual variations in the rorquals and recorded differences in their external and internal structure.

**Contains** a study of external and internal variations in the structure of rorquals, based on literature data and the author's investigation of skeletons in various museums, with record of dimensions of 18 species, p. 59-69, and two survey tables at the end. Includes some

species native to northern Norwegian waters (Lofoten Island).

**Copy seen:** MH-Z.

**25845. SARS, GEORG OSSIAN, 1837-1927.** Oversigt af Norges marine Ostracoder. (Norske videnskaps-akademi, Oslo. Forhandling, 1865, pub. 1866, p. 1-130) **Title tr.:** A review of marine Ostracoda of Norway.

**Contains** a taxonomic treatment of marine crustaceans of the order Ostracoda, inhabiting Norwegian waters, with Latin diagnoses of the families, genera and 78 species (about 60 are new to science) including many native to Greenland and Barents Sea.

**Copy seen:** MH-Z.

**25846. SARS, GEORG OSSIAN, 1837-1927.** The Phyllopoda of the Jana Expedition. (Akademik nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1897. t. 2, no. 4, p. 463-93, plates 23-30)

**Contains** detailed descriptions in English of 8 phyllopods (males and females) brought home by Baron E. von Toll and Dr. A. Bunge from the Expedition to Yana River region and New Siberian Islands in 1885-86, with synonymy, list of localities and data on total distribution.

**Copy seen:** DLC; MH-Z.

**25847. SARS, GEORG OSSIAN, 1837-1927.** Prodröm descriptionis Crustaceorum et Pycnogonidarum, quae in expeditione norvegica anno 1876 observavit. (Archiv for matematik og naturvidenskab, 1877. Bd. 2, p. 237-71) **Title tr.:** Preliminary descriptions of Crustacea and Pycnogonida observed during the Norwegian Expedition of 1876.

**Contains** a list of the stations in the Greenland Sea and a systematic enumeration of 156 species of crustaceans (20 species described as new) and eight pycnogonids, with analyses of four new species and a list of 80 species with tabulated data on their distribution in other arctic regions.

**Copy seen:** MH-Z.

**25848. SARS, GEORG OSSIAN, 1837-1927.** Revision af gruppen: Isopoda chelifera med karakteristisk af nye herhen hørende arter og slægter. (Archiv for matematik og videnskab, 1882. Bd. 7, hefte 1, p. 1-54) **Title tr.:** A revision of the group Isopoda chelifera with characteristics of new genera and species.

**Contains** a critical revision of 60 species of marine crustaceans of the suborder Isopoda chelifera from various oceans

and seas, with Latin diagnoses of 25 new species, synonymy, critical notes and data on geographic distribution; includes nine species native to Greenland and Barents Seas.

**Copy seen:** DLC; MH-Z.

**25849. SARS, GEORG OSSIAN, 1837-1927.** Undersøgelser over Hardangerfjordens fauna. (Norske videnskaps-akademi, Oslo. Forhandling, 1871, pub. 1872, p. 246-86) **Title tr.:** Investigation of Hardangerfjord fauna.

**Contents** include a list of 119 crustaceans observed during the author's trip, with descriptions of some new forms (p. 256-82) including *Lamprops uniplicata* and *Munida tenuimana* n. spp. native to Hardangerfjord and Lofoten Islands waters, also 85 other species occurring in the same regions (see table, p. 283-87)

**Copy seen:** DLC; MH-Z.

**25850. SARS, MICHAEL, 1805-1869.** Bemaerkninger over Crangoninerne med beskrivelse over to nye norske Arter. (Norske videnskaps-akademi, Oslo. Forhandling, 1861, pub. 1862, p. 179-87) **Title tr.:** Notes on Crangoninae with description of two Norwegian species.

**Contains** a list of 11 species of the crustacean genus *Crangon* and six species of the related genera, including at least five representatives of arctic regions, some having circumpolar distribution (*C. boreas*).

**Copy seen:** DLC; MH-Z.

**25851. SARS, MICHAEL, 1805-1869.** Bemaerkninger over det dyriske livs udbredning i havets dybber. (Norske videnskaps-akademi, Oslo. Forhandling, 1864, pub. 1865, p. 53-68) **Title tr.:** Notes on the vertical distribution of animal life in the ocean.

**Contains** a study of the vertical distribution of marine fauna in the North Atlantic with a list of about 100 species (in seven orders) including some native to Greenland and Barents Sea; based on the author's own observations, on papers of various Scandinavian scientists and on that of G. C. Wallich, *Notes on the presence of animal life at sea*, 1860 (*Arctic Bibliography*, No. 19099).

**Copy seen:** DLC; MH-Z.

**25852. SARS, MICHAEL, 1805-1869.** Bemaerkninger over fire norske Hydroider. (Norske videnskaps-akademi, Oslo. Forhandling, 1862, pub. 1863, p. 25-39) **Title tr.:** Notes on four Norwegian hydroids.

**Contains** Latin diagnoses of two genera and four species of hydroids inhabiting Norwegian waters including *Lafoea plicatilis* n. sp. found near Vadsø (70°05' N.) in Finnmark, and *L. dumosa*, *L. fruticosa* and *Grammaria abietina* spreading to Nordkap on the northern coast, with some critical notes (in Norwegian).

**Copy seen:** DLC; MH-Z.

**25853. SARS, MICHAEL, 1805-1869.** Beretning om et nyt lernaalignende krebsdyr, *Sabellacheres gracilis* SARS. (Norske videnskaps-akademi, Oslo. Forhandling, 1861, pub. 1862, p. 141-43) **Title tr.:** A report on a new lernaean crustacean, *Sabellacheres gracilis* SARS.

**Contains** a Latin diagnosis of *Sabellacheres gracilis* n. gen. et sp., a minute crustacean parasitic on an annelid *Myzicola sarsii*, found in Troms waters.

**Copy seen:** DLC; MH-Z.

**25854. SARS, MICHAEL, 1805-1869.** Beskrivelse af fire nye parasitiske Copepoder. (Norske videnskaps-akademi, Oslo. Forhandling, 1861, pub. 1862, p. 134-41) **Title tr.:** Description of four new parasitic Copepoda.

**Contains** Latin diagnoses and critical notes on four new genera and species of minute marine copepods parasitic on annelid worms, including *Sabelliphilus elongatus* and *Chonephilus dispar* n. gen. et spp., native to Troms county waters.

**Copy seen:** DLC; MH-Z.

**25855. SARS, MICHAEL, 1805-1869.** Beskrivelse over nogle norske Polyzoer. (Norske videnskaps-akademi, Oslo. Forhandling, 1862, pub. 1863, p. 141-67) **Title tr.:** Description of some Norwegian polyzoans.

**Contains** a list of ten species of marine polyzoans (bryozoans), all native to Greenland and Barents Seas, with Latin descriptions, synonymy, critical notes and data on geographic distribution. *Eschara palmata* is described as new to science.

**Copy seen:** DLC; MH-Z.

**25856. SARS, MICHAEL, 1805-1869.** [Beskrivelse over norske Annelider]. (Norske videnskaps-akademi, Oslo. Forhandling, 1861, pub. 1862, p. 87-95) **Title tr.:** Description of Norwegian Annelida.

**Contains** (in this report without a formal title) Latin diagnoses of one new genus (*Ophiodromus*) and seven species of marine annelid worms (four are new)

including five native to the Greenland and Barents Seas.

**Copy seen:** DLC; MH-Z.

**25857. SARS, MICHAEL, 1805-1869.** Bidrag til en skildring af den arctiske molluskfauna ved Norges nordlige kyst. (Norske videnskaps-akademi, Oslo. Forhandling, 1858, pub. 1859, p. 34-87)

**Title tr.:** A contribution to the description of the arctic molluscan fauna of the northern coasts of Norway.

**Contains** a systematic list of all known molluscs from the arctic region of Norway with data on Norwegian and total distribution; a synopsis of 133 arctic species and data on their occurrence on western coast of Greenland and eastern coast of North America; another list of 86 boreal species of Norway and statistical data on occurrence of arctic species in other regions.

**Copy seen:** DLC; MH-Z.

**25858. SARS, MICHAEL, 1805-1869.** [Echinodermer og coelenterater, fundne ved Lofoten.] (Norske videnskaps-akademi, Oslo. Forhandling, 1867, pub. 1868, p. 19-23) **Title tr.:** Echinoderms coelenterates collected in the Lofoten Islands.

**Contains** (in this report without formal title) brief preliminary descriptions or critical notes on five species of echinoderms and coelenterates collected in Lofoten waters by G. O. Sars in 1866, including *Thyonidium scabrum* and *Holothuria natans* n. spp. and *Isidella lofotensis* n. gen. et. sp.

**Copy seen:** DLC; MH-Z

**25859. SARS, MICHAEL, 1805-1869.** Fortsatte bemaerkninger over det dyriske livs udbredning i havets dybber. (Norske videnskaps-akademi, Oslo. Forhandling, 1868, pub. 1869, p. 246-75) **Title tr.:** Further notes on vertical distribution of animal life in the ocean.

**Contains** a study of vertical distribution of marine fauna in Norwegian coastal waters, with a list of 247 species found alive at 200-450 fathoms depth. This paper is in continuation of the author's *Bemaerkninger over det dyriske livs udbredning*, 1865, q. v., which lists 92 species at 200-300 fathoms depth.

**Copy seen:** DLC; MH-Z.

**25860. SARS, MICHAEL, 1805-1869.** Fortsatte bidrag til kundskaben om Norges Annelider. (Norske videnskaps-akademi, Oslo. Forhandling, 1864, pub. 1865, p. 5-20) **Title tr.:** Further

contributions to the knowledge of Norwegian Annelida.

**Contains** Latin and Norwegian descriptions of *Amphiteis finmarchica*, *Polycirrus arcticus* and *Terebella ebranchiata* n. spp., and *Amphiteis gunneri*, all native to Troms and Finnmark waters.

**Copy seen:** DLC; MH-Z.

**25861. SARS, MICHAEL, 1805-1869.** Fossiler fra Skotlands og Nordamerica's glacial formation. (Norske videnskaps-akademi, Oslo. Forhandling, 1867, pub. 1868, p. 51-58) **Title tr.:** Fossils from glacial formations in Scotland and North America.

**Contains** in pt. 2 of this paper, a list of 29 fossil molluscs, collected by Dr. Packeraid in various North American localities, including six species from Labrador.

**Copy seen:** DLC; MH-Z.

**25862. SARS, MICHAEL, 1805-1869.** Malacozoologiske iakttagelser: I, Om dyret af *Cryptodon sarsii* (Axinus) Philippi; II, Nye arter af slægten *Siphodontalium*. (Norske videnskaps-akademi, Oslo. Forhandling, 1864, pub. 1865, p. 283-315, plates 4-7) **Title tr.:** Zoological observations on molluscs: I, On *Cryptodon sarsii* (Axinus) Philippi; II, New species of the genus *Siphodontalium*.

**Contains** Latin and Norwegian description of molluscs, *Cryptodon sarsii* distributed all along the coast of Norway, and four new species of the genus *Siphodontalium* spreading to Lofoten Islands waters.

**Copy seen:** DLC; MH-Z.

**25863. SARS, MICHAEL, 1805-1869.** Mémoires pour servir à la connaissance des Crinoïdes vivants. Christiania, Brøgger & Christie, 1868. 65 p. plates 1-6. (Programme de l'Université royale de Norvège) **Title tr.:** Contributions to the knowledge of living Crinoidea.

**Contains** a morphological study of *Rhizocrinus*, a new genus of the group Crinoidea of marine echinoderms and Latin diagnoses of *Rhizocrinus lofotensis* n. gen. et sp. (p. 38-39), collected by G. O. Sars in Lofoten Islands waters (68°11' N.); also data on the biology and development of another echinoderm, *Antedon sarsii*, from the same region.

**Copy seen:** DLC; MH-Z.

**25864. SARS, MICHAEL, 1805-1869.** Nye dybvandserustaceer fra Lofoten. (Norske videnskaps-akademi, Oslo. For-

handlinger, 1869, pub. 1870, p. 147-74)  
**Title tr.:** New deep-sea Crustaceans from the Lofoten Islands.

Contains Latin diagnoses of four new genera and 25 new species of crustaceans found living at 200-300 fathoms depth in Lofoten Islands waters.

**Copied seen:** DLC; MH-Z.

**25865. SARS, MICHAEL, 1805-1869.**  
Om antallet af Holothurider i den norsk-aretske region. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1858, pub. 1859, p. 167-70) **Title tr.:** On the number of Holothurioidae in the Norwegian arctic region.

Contains a list of seven sea cucumbers (holothurians), including *Holothuria ecalcareo* and *Molpadia borealis* n. spp., new to the fauna of the Norwegian Arctic, bringing the number of all known species from this region up to ten.

**Copied seen:** DLC; MH-Z.

**25866. SARS, MICHAEL, 1805-1869.**  
Om arktiske dyreformer i Christiania-fjorden. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1865, pub. 1866, p. 196-102) **Title tr.:** On arctic faunal forms in Christianiafjord.

Contains a systematic list of 32 species of so-called "arctic outliers" (arthropods, molluscs, worms and echinoderms) in the fauna of Christianiafjord, with data on their distribution in their native arctic regions and the discussion of the reasons of their occurrence in the southern part of Norway.

**Copied seen:** DLC; MH.

**25867. SARS, MICHAEL, 1805-1869.**  
Om *Chaetopterus sarsii* Boeck nov. sp. og *Chaetopterus norvegicus* Sars. (Norske videnskaps-akademi, Oslo. Forhandlinger 1860, pub. 1861, p. 85-88) **Title tr.:** On *Chaetopterus sarsii* Boeck n. sp. and *C. norvegicus* Sars.

Contains Latin diagnoses of three annelid worms of the genus *Chaetopterus*, inhabiting European waters, including *C. norvegicus*, found along Norwegian coast from Christianiafjord to Lofoten Islands.

**Copied seen:** DLC; MH-Z.

**25868. SARS, MICHAEL, 1805-1869.**  
Om de ved Norges kyster forekommende arter af dem Linneiske Annelidslægt *Sabella*. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1861, pub. 1862, p. 116-33) **Title tr.:** On some species of the Linnean annelid genus *Sabella* occurring on the Norwegian coast.

Contains a critical revision of this genus of annelid worms, split by the

author into four genera (*Sabella* (pro parte), *Chone*, *Dasychone* and *Myzicola*). Latin descriptions are given for these genera and for ten species (four described as new) native to the Norwegian coast, and an additional list of seven doubtful species is appended. Includes at least six species reported from northern Norwegian waters.

**Copied seen:** DLC; MH-Z.

**25869. SARS, MICHAEL, 1805-1869.**  
Om nogle nye eller lidet bekendte norske Coelenterater. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1860, pub. 1861, p. 140-51) **Title tr.:** On some new or little known Norwegian coelenterates.

Contains Latin and Norwegian descriptions of ten new or little known coelenterates, including five species native to the Greenland and Barents Seas.

**Copied seen:** DLC; MH-Z.

**25870. SARS, MICHAEL, 1805-1869.**  
Om tre nye Holothurider, af hvilke den ene danner typus for en ny slægt. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1858, pub. 1859, p. 170-79) **Title tr.:** On three new Holothurioidae of which one forms the type of a new genus.

Contains Latin and Norwegian descriptions of three new sea cucumbers, including *Holothuria ecalcareo* and *Molpadia borealis* n. spp. from Oxfjord, Finnmark, Norway.

**Copied seen:** DLC; MH-Z.

**25871. SARS, MICHAEL, 1805-1869.**  
Oversigt af Norges Echinodermer. Christiania, Brøgger & Christie, 1861. vi, 160 p., plates 1-16. (Udgiven af Videnskabselskabet i Christiania) **Title tr.:** A survey of Norwegian echinoderms.

Contains a critical revision of 79 species of marine echinoderms inhabiting Norwegian waters, with synonymy, critical notes, Latin diagnoses of two new genera and four new species and (p. 140-46) data on geographic distribution. Includes at least 30 species native to northern waters.

**Copied seen:** DLC; MH-Z.

**25872. SARS, MICHAEL, 1805-1869.**  
Oversigt over de norsk-aretske region forekommende krebsdyr. (Norske videnskaps-akademi, Oslo. Forhandlinger, 1858, pub. 1859, p. 122-63) **Title tr.:** A review of the crustaceans of the Norwegian arctic region.

Contains a systematic list of 89 marine crustaceans collected by the author

during his journey to Nordland and Finnmark in the summer of 1857, including Latin and Norwegian diagnoses of 11 new species and critical notes and data on Norwegian and total distribution of other species, also comparison with faunas of other arctic regions.

**Copy seen:** DLC; MH-Z.

**25873. SARS, MICHAEL, 1805-1869.** Uddrag af en afhandling om de ved Norges kyster forekommende arter af Annelidslægten *Polynoë*. (Norske videnskaps-akademi, Oslo. Forhandlingler, 1860, pub. 1861, p. 54-62) **Title tr.:** A summary of a study of the species of annelidan genus *Polynoë* occurring on the coast of Norway.

**Contains** a critical revision of ten Norwegian species of annelidan genus *Polynoë* with Latin diagnoses of five new species; includes six species native to Greenland and Barents Sea.

**Copy seen:** DLC; MH-Z.

**25874. SARS, MICHAEL, 1805-1869.** [Uddrag af en afhandling over en deel norske Annelider]. (Norske videnskaps-akademi, Oslo. Forhandlingler 1861, pub. 1862, p. 50-67) **Title tr.:** Summary of an essay on Norwegian Annelida.

**Contains** (in this report without formal title) a critical revision of 11 marine annelid worms, occurring in Norwegian waters, with Latin diagnoses, critical notes and data on distribution. Includes five species native to the Greenland and Barents Sea; three species described as new.

**Copy seen:** DLC; MH-Z.

**25875. SARS, MICHAEL, 1805-1869.** Udtog af en afhandling om ammeslægten *Corymorpha* og dens arter opammede Meduser. (Norske videnskaps-akademi, Oslo. Forhandlingler, 1859, pub. 1860, p. 96-105) **Title tr.:** A summary of a report on medusae of the genus *Corymorpha*.

**Contains** descriptions of seven species of hydrozoan genus *Corymorpha* (two species described as new) including *C. glacialis* n. sp. found in Vadsø, Varangerfjord region (70° N.) and *C. sarsii* from Vestfjord and Lofoten Islands waters, with some critical notes.

**Copy seen:** MH-Z.

**25876. SARS, MICHAEL, 1805-1869.** En zoologisk og anatomisk beskrivelse over *Siphonodentalium*, en ny slægt af Dentalidernes familie. (Norske videnskaps-akademi, Oslo. Forhandlingler,

1859, pub. 1860, p. 182-84) **Title tr.:** Zoological and anatomical description of *Siphonodentalium*, a new genus of the family Dentalidae.

**Contains** Latin diagnoses of new molluscan genus *Siphonodentalium* and *S. vitreum* n. sp. native to Oxford, Finnmark, northern Norway.

**Copy seen:** DLC; MH-Z.

**25877. SARVAS RISTO.** Havaintoja Pohjois - Suomen kuloalojen - kasvillisuuden kehityksestä. (Luonnon tutkija, 1938, v. 42, no. 6, p. 215-21, illus., table) **Title tr.:** Observations on the development of the flora in some burned-over areas in northern Finland.

**Contains** data on the plant species which appeared after fire in forested areas of northern Finland. The author elaborates on Norrlin's tabulation of the occurrence of 22 vegetation types in the three most common forest types of the area at 1, 10, 20, 30, 50 and 100 years after burning.

**Copy seen:** DLC.

**25878. SARVAS, RISTO.** Kuloalojen luontaisesta metsittymisestä. Pohjois-Suomen juuvilla kankailla suoritettu metsäbiologinen tutkielma. Helsinki, 1937. 147 p., plates, illus., maps (incl. 1 fold.), tables, diagrs. (Acta forestalia fennica, 46:1) **Title tr.:** The natural reforestation of burned areas. A study in the forest biology of the dry heath (moor) areas of northern Finland.

**Description** of the area, its general natural characteristics, forests and forest types; methods and materials used for this study; causes and nature of wild fires, their damage to forests; reforestation of burned areas, their undergrowth, observations on the cutting of new birch shoots and damage to seedlings. Data on achievements in reforesting burned-over areas, and work still to be done, with descriptions of 75 experimental localities. Bibliography (about 80 items). Summary in German, p. 77-83.

**Copy seen:** DLC.

**25879. SARVAS, RISTO.** Tutkimuksia Perä-Pohjolan harsimalla hakattujen yksityismetsien luontaisesta uudistamisesta. Helsinki, 1950. 95 p., illus.,

tables, diagrs., map. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisu, v. 38, no. 1) **Title tr.:** Investigations on natural regeneration of selectively-cut private forests in northern Finland.

**Contains** a study of 37 sample plots, 13 from *Ericaceae-Cladinae* type and 24 from *Empetrum-Myrtillus* type; these dry forest types represent 73 per cent of all firm productive forest lands of northern Finland. The stands studied are located in the Arctic, on relatively low lands (150-450 metres above sea level); a comparative method of investigation was applied. Bibliography (about 100 items). Summary in English. **Copy seen:** DLC.

**25880. SAUBERER, FRANZ.** Die spektrale Strahlungsdurchlässigkeit des Eises. (Wetter und Leben, Mar. 1950. v. 2, no. 9-10, p. 193-97) **Title tr.:** The spectroscopic transparency of ice.

"It is assumed that the radiation properties of ice from different inland waters are similar and deviate little from those of pure water. Experiments by Kalitin with pond ice indicate that the transparency of clear ice in the ultra-violet and visible ranges is practically equal. A quartz double-monochromator, Moll micro-thermopiles, selenium-photo elements, and infra-red photo resistances were used to measure the transparency of 14 to 16 cm. thick ice plates. Comparisons between the transparency of sea-ice and distilled water show only small differences. The transparency of pure clear ice to infra-red rays corresponds essentially to that of pure water."—**SIPRE.** **Copy seen:** DLC; DWB.

**25881. SAURAMO, MATTI.** Alfred Wegenerin elämäntyö. (Terra, 1932. 44:1, p. 39-66, illus.) **Title tr.:** The life work of Alfred Wegener.

**Contains** account of the death of Wegener in 1930 on the inland ice during his expedition to Greenland 1929, 1930-31; his investigation of the depth of the icecap by seismic soundings in comparison with Meinardus' findings; Wegener's studies toward determining the effect of land ice on the physical structure of the earth; his theory of continental drift, Greenland moving closer to North America; his first two trips to Greenland 1906 and 1913, doing meteorological work, his last trips as expedition leader and geophysicist in 1929-30. Includes also Wegener's work outside the Arctic.

**Copy seen:** DLC.

**25882. SAURAMO, MATTI.** The Quaternary geology of Finland. Helsinki, 1929. 110 p., 39 illus., 25 plates, maps, incl. fold., diagrs. (Finland. Geologiska kommission. Bulletin, no. 86)

**Contains** chapters on glaciation of northern Europe; moraine drift; glacial-fluvial deposits; glacial-fluvial erosion; clay deposits; changes of level; development of the flora and changes of climate; prehistoric periods. Chronological table and bibliography (69 items). **Plates:** 41 photographs (many of northern localities), illustrative of the phenomena discussed. **Maps** show extent of the European ice-sheet during these stages; striae and boulder trains in Finland; disappearance of the last ice-sheet in northern Europe; highest shores in Finland; Yoldia Sea about 7900 B. C.; northern limits of certain plant species, past and present in Finland; superficial deposits. **Copy seen:** DLC.

**25883. SAURAMO, MATTI.** Suomen luonnon kehitys jääkaudesta nykyaikaan. Helsinki, Werner Söderström Osakeyhtiö, 1940. 286 p., 136 illus., incl. maps, diagrs. **Title tr.:** Nature and development of the landscape of Finland from the ice age to the present.

This well-illustrated text book of historical geology deals with evidences of glaciation, glacier action in Europe and Finland during the ice age; moraines, boulders, and evolution of their present grouping; forms created by melt water; clay and sand; chronology of the ice age, its passing. Present rise of land in Finland; young and old alluvium-built areas; shore forms; melt-water deltas; high marks of the Yoldia sea; Salpausselkä bay; Baltic Sea during the Salpausselkä stage; later development of the eastern sea in Karelia and the North; swamp formation and types, their stratigraphy, effect on vegetation, pollen, pollen analysis and its use as chronology indicator; diatoms. The Rhabdonoma sea, Ancylus lake; Littorina sea; development of arctic sea and later lakes; rise of land in late Quaternary time. Interglacial forms and theories on ice age weather. Changing climate; radiation during Quaternary time; development of plants; climatic change in the late Quaternary; early man, and his epoch in Finland. Includes detailed index, and a bibliography (35 items). **Copy seen:** DLC.

**25884. SAURAMO, MATTI.** Tracing of glacial boulders and its application in

prospecting. Helsinki, 1924. 37 p., maps. (Finland. Geologiska kommission. Bulletin, v. 11, no. 67)

Introductory discussion on the utilization of boulders in search for ore deposits, and methods of tracing the boulders to their source; followed by description of 13 ore deposits being successfully prospected by means of glacial boulders traced to source; remarks on striae as indicators of the ice movement; formation of boulder trains; how to trace a glacial boulder.

**Copy seen:** DLC.

**25885. SAURAMO, MATTI.** Über das Verhältnis der Ose zum höchsten Strand. Helsinki, 1929. 15 p. **Title tr.:** On the relation of the eskers to the highest shore line.

**Contains** a discussion of the theories of esker formation and the evidence supporting them. The relation of the eskers to the highest sea level is analyzed in a general way, and also on the basis of specific eskers in Finland; conclusions are drawn on the effect of the highest level of standing waters on the height and form of eskers. Bibliography (14 items).

**Copy seen:** DLC.

**25886. SAURAMO, MATTI.** Yoldia-meri entisten ja nykyisten tutkimusten valossa. (Terra, 1933. 45:1, p. 1-14, illus., diagrs.) **Title tr.:** The Yoldia sea in the light of earlier and modern research.

Presidential address to the Geographical Society of Finland in 1933, outlining changes since late 19th century in conception of the late-glacial or Yoldia sea (named from the bivalve *Yoldia arctica* found with other arctic faunal fossils in clay overlain with gravel). Author notes the work of Munthe, Ramsay, Hellaakoski and himself, tracing the highest beaches and shore marks in different parts of Fennoscandia, also his own recent attempt to work out a new map illustrating the Yoldia sea (extending from 58°-70° N. lat.). He includes some data on the shore marks and beaches, the elevation, diatoms, land ice, eskers, etc. Summary of text and explanation of maps and diagrams is given in English.

Contains field notes on 29 species and varieties of flowering plants, 20 of which are new records for the Chesterfield Inlet region and nine for the Canadian Eastern Arctic.

**Copoly seen:** DGS.

**25899. SAWYER, C. N.** Activated sludge oxidations VI. Results of feeding experiments to determine the effect of the variables temperature and sludge concentration. (Sewage works journal, 1940. v. 12, p. 244-59, illus., tables, diags.)

Part of the experiments were conducted to ascertain the effect of temperature upon the nitrifying ability of activated sludge, it having been observed previously that winter temperatures are conducive to the development of non-nitrifying sludges. Studies were conducted at 10°, 15°, 20° and 25° C., with activated sludges of identical concentration, also at 10° C. and room temperature with various concentrations of activated sludge. Detailed conclusions and a summary are presented on p. 257-58. Bibliography (8 items).

**25900. SAXTON, J. A.** Reflection coefficient of snow and ice at V. H. F. (Wireless engineer, Jan. 1950. v. 27, no. 316, p. 17-25)

"The presence of snow or ice on the earth's surface produces a change in the reflection coefficient of the surface because of multiple reflections within the layer of snow or ice. An estimate is made of the dielectric properties of snow. A general formula for reflection coefficients for plane waves in the presence of a layer of snow or ice is given. The formula is in terms of several basic parameters which have

been determined for frequencies of 30, 300, 3000, and 30,000 Mc/sec. Reflection coefficients for snow over land, and ice over sea water are calculated for 300 and 3000 Mc/sec. at angles of 0° (normal incidence), 45°, and 80° for radiation polarized with the electric vector either parallel to or in the plane of incidence. It appears that the vertical-coverage diagram of a very high frequency radio transmitter may be appreciably modified by the presence of layers of ice or snow."—SIPRE. Bibliography (30 items).

25903. SCHAANNING, HANS THOMAS LANGE, 1878- . Bidrag til sidensvansens (*Ampelis garrulus*, Lin.) biologi og morfologi. (Dansk ornithologisk forening. Tidsskrift, 1916-18, pub. 1917. Årg. 11, hefte 1, p. 17-37, illus.) **Title tr.:** A contribution to the biology and morphology of the waxwing (*Ampelis garrulus*, Lin.)

**Contains** a study of this bird, inhabiting northern Scandinavia (Finnish and Swedish Lapland), with tables of wing dimensions (male, female and young birds), size and shape of eggs, notes on life cycle, propagation, phenology and distribution. **Copy seen:** MH-Z.

25904. SCHAANNING, HANS THOMAS LANGE, 1878- . Norsk fugle-register.

En systematisk ordnet navnefortegnelse over Norges fugle og deres utbredelse hos os tilkjemmed samtlige literaturnavne i tiden 1599-1912. (Bergen, Norway. Museum. Aarbok, 1913, no. 6, p. 1-143) **Title tr.:** Norwegian bird register. A systematically arranged list of Norwegian bird names and data on the bird distribution with names recorded in literature from 1599 to 1912.

**Contains** a systematic list of 300 species of birds inhabiting Norway, with a prevalent vernacular name, Latin name and a list of all known localities with local names; dates of collection and brief data on distribution; a bibliography (285 items) and a systematic index of birds, p. 133-43; includes many species native to northern regions of Norway. **Copy seen:** MH-Z.

25905. SCHAANNING, HANS THOMAS LANGE, 1878- . Østfinmarkens fuglefauna. Ornithologiske meddelelser vedrørende trakterne om Varangerfjorden, spesielt Sydvarangers fauna i aarene 1900-1906. (Bergen, Norway. Museum. Aarbok 1907, no. 8, p. 1-97, 3 plates)

**Title tr.:** Bird fauna of eastern Finnmark. Ornithological report on the Varanger Fjord region, especially the fauna of Sydvaranger in the years 1900-1906.

**Contains** the results of the author's observations carried out during 1900-1906 (mostly in Sydvaranger) with a list of 172 species of birds and data on their biology, ecology and phenology; a list of 115 species observed every year, p. 6-7, another list of 24 species arriving every other year, and 32 appearing only occasionally, p. 7-8; a table of 67 species of migratory birds and the dates of their passing over Øvre Pasvik (69° N.), p. 9-13. **Copy seen:** MH-Z.

25906. SCHAANNING, HANS THOMAS LANGE, 1878- . Om endel nye fugler for Spitsbergen-området. (Norsk ornithologisk tidsskrift, 1923. Serie 1, no. 4, p. 221) **Title tr.:** On some birds new for the Spitsbergen region.

Author adds nine species to the birds recorded from Svalbard in his *Tabellarisk oversikt av Norges fugler*, 1921, q. v.

**Copy seen:** DI.

25907. SCHAANNING, HANS THOMAS LANGE, 1878- . Revidert oversikt av Norges fugler, inclusive Svalbards og Jan Mayens fauna. (Norsk ornithologisk tidsskrift, 1930. ser. 3,

no. 11-12, p. 277-91, tables, map) **Title tr.:** Revised summary of Norwegian birds including the fauna of Svalbard and Jan Mayen.

Seventy-nine species are indicated for Jan Mayen and Svalbard and nearly 300 for northern Norway.

**Copy seen:** DI.

**25908. SCHAANNING, HANS THOMAS LANGE, 1878-** . "Ring-fugler" VIII. (Norsk ornithologisk tidsskrift, 1930. ser. 3, no. 11-12, p. 264-68) **Title tr.:** Banded birds VIII.

One of a series of reports on recoveries in Norway of birds which had been banded earlier, in different parts of northern Europe including Lapland.

**Copy seen:** DI.

**25909. SCHAANNING, HANS THOMAS LANGE, 1878-** . Tabellarisk oversikt av Norges fugler. (Norsk ornithologisk tidsskrift, 1921. ser. 1, no. 1, p. 8-24, incl. tables) **Title tr.:** Tabular summary of Norwegian birds.

Lists over 300 species and subspecies, including 59 for Svalbard and several hundred for arctic Norway.

(Norsk ornithologisk tidsskrift, 1926. ser. 2, no. 7, p. 160) **Title tr.:** Spring migration in Upper Pasvik, South Varanger 1908, 1910, and 1911. Contribution to the avifauna of East Finnmark.

Table of 75 bird species showing data of arrival in each year mentioned, with note on data of break-up of ice.

**Copy seen:** DI.

**25911. SCHÄNNING, TOROLV.** Ornithologiske nyheter fra Øvre-Pasvik i Øst-Finnmark. (Norsk ornithologisk tidsskrift, 1935. ser. 4, no. 14-15, p. 119) **Title tr.:** Ornithological news from Upper Pasvik, East Finnmark.

Note on six bird species of interest.

**Copy seen:** DI.

**25912. SCHÄNNING, TOROLV.** Vår- trekket i Øvre-Pasvik, Øst-Finnmark i 1931 og 1932. (69°10' N. B.). (Norsk ornithologisk tidsskrift, 1932. ser. 4, no. 13, p. 28-29) **Title tr.:** Spring migration in Upper Pasvik, East Finnmark in 1931 and 1932. (69°10' N.).

Dates of arrival of 27 species of birds for each of the two years mentioned.

**Copy seen:** DI.

**25913. SCHAEFER, VINCENT J.** The development of a snow classification system. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 157-159, illus.)

"The various types of precipitation which occur during snow and sleet storms are classified into 9 basic forms. It is suggested that 2 classifications be used to differentiate more distinctly between snow crystals. One classification would include only the solid precipitation common to snow storms and the other the effects and processes related to the snow surface."—SIPRE.

**25914. SCHAEFER, VINCENT J.** The formation of ice crystals in the laboratory and in the atmosphere. (Chemical review, Apr. 1949. v. 44, p. 291-320, illus., tables, graphs, diagrs. Also pub. in: International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux des seances. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 186-210, illus.)

"Aircraft radio static during snowstorms is produced when the plane becomes charged by snow particles striking and rubbing the plane's metal surface. The discharging accounts for the static noise. Two types of snowstorms, cross current and positive current, can be identified in terms of electrical properties. Snow particles have been classified into nine different types, according to shape. Plastic replicas of snow crystals can be made by allowing the snow particles to fall on plates coated with a dissolved resin. The snow and solvent are allowed to evaporate, and an impression is left in the resin. Sublimation nuclei are detected in the free air by use of cold chambers and supercooled films supported on rings or on their plastic films. Procedures for simulating natural clouds in the laboratory are given. Not all dust particles in clouds act as nuclei for formation of ice crystals. Only snow which would have eventually fallen can be made to form and precipitate when seeding natural clouds with dry ice or

Ag I. Overseeding will cause the formation of too many small crystals, and will produce only an ice cloud."—SIPRE. Bibliography (20 items).
